# 1

## Before You Start

Welcome to use Cloud Certificate Manager (CCM). Cloud Certificate Manager (CCM) issues cloud certificates and manages the entire lifecycle of the certificates. It can be used in many scenarios, such as cloud platform, Internet of Vehicles (IoV), and Internet of Things (IoT). CCM includes the SSL Certificate Manager (SCM) and Private Certificate Authority (PCA) services.

Before calling CCM APIs, ensure that you have understood the concepts related to CCM. For more information, see [What Is CCM?](#)

## Endpoints

An endpoint is the **request address** for calling an API. CCM is a global service deployed for all physical regions. [Table 1-1](#) lists all CCM endpoints. You can obtain CCM endpoints at [Regions and Endpoints](#).

**Table 1-1** CCM endpoints

Region	Endpoint Region	Endpoint	Protocol	Microservice Included
All	ALL	scm.ap-southeast-1.myhuaweicloud.com	HTTPS	SCM
All	ALL	ccm.ap-southeast-3.myhuaweicloud.com	HTTPS	PCA

## Concepts

- Account

An account is created upon successful registration. The account has full access permissions for all of its cloud services and resources. It can be used to reset user passwords and grant user permissions. An account is a payment entity. Accounts should not be used directly to perform routine management. For

security purposes, create sub-users and grant them permissions for routine management.

- User

An IAM user is created using an account to use cloud services. Each IAM user has its own identity credentials (password and access keys).

An IAM user can view the account ID and user ID on the page of the console. The domain name, username, and password will be required for API authentication.

- Region

Regions are divided based on geographical location and network latency. Public services, such as Elastic Cloud Server (ECS), Elastic Volume Service (EVS), Object Storage Service (OBS), Virtual Private Cloud (VPC), Elastic IP (EIP), and Image Management Service (IMS), are shared within the same region. Regions are classified as universal regions and dedicated regions. A universal region provides universal cloud services for common tenants. A dedicated region provides services of the same type only or for specific tenants.

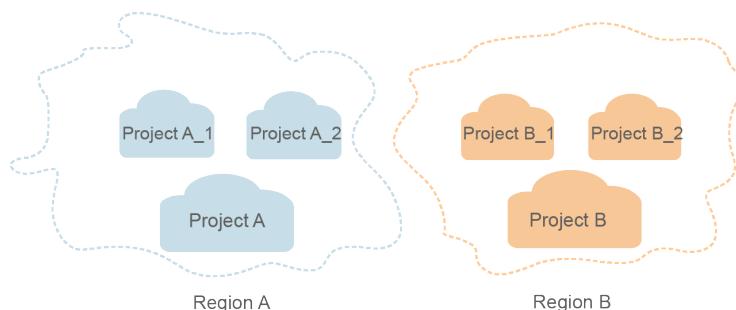

- Availability Zone (AZ)

An Availability Zone (AZ) contains one or more physical data centers. Each AZ has independent cooling, fire extinguishing, moisture-proof, and electricity facilities. Within an AZ, compute, network, storage, and other resources are logically divided into multiple clusters. AZs within a region are interconnected using high-speed optical fibers to allow you to build cross-AZ high-availability systems.

- Project

Projects group and isolate resources (including compute, storage, and network resources) across physical regions. A default project is provided for each region, and subprojects can be created under each default project. Users can be granted permissions to access all resources in a specific project. For more refined access control, create subprojects under a project and create resources in the subprojects. Users can then be assigned permissions to access only specific resources in the subprojects.

**Figure 1-1** Project isolating model

- Enterprise Project

Enterprise projects group and logically isolate resources. An enterprise project can contain resources in multiple regions, and resources can be directly transferred between enterprise projects.

For details about how to obtain enterprise project IDs and features, see  
[Enterprise Management User Guide](#).

# 2 API Overview

By using the APIs provided by CCM, you can use all functions of CCM.

## Managing SSL Certificates

API		Description
Certificate lifecycle management	Querying the Certificate List	Query the SSL certificate list.
	Importing a Certificate	Import a certificate to SCM.
	Obtaining Details of a Certificate	Query details of an SSL certificate.
	Deleting a Certificate	Delete an SSL certificate.
	Exporting a Certificate	Export an SSL certificate.
Certificate application management	Apply for a certificate.	Apply for an SSL certificate.
	Withdrawing a Certificate Application	Withdraw the certificate application.
Certificate order management	Purchasing an SSL Certificate	Purchase an SSL certificate.
Certificate deployment management	Pushing a Certificate	Push an SSL certificate to other Huawei Cloud services.
	Pushing Certificates in Batches	Push an SSL certificate to other Huawei Cloud services in batches.

API		Description
	Deploying Certificates	Deploy SSL certificates to other Huawei Cloud services, such as CDN, WAF, and ELB.
	Querying Deployed Resources	For issued and uploaded non-SM cryptographic algorithm certificates, query the resources that have been deployed for a certificate.
CSR management	Creating a CSR	Create a CSR.
	Querying the CSR List	Query the CSR list.
	Querying a CSR	Query the CSR.
	Updating CSR	Update CSR.
	Deleting a CSR	Delete CSR
	Upload CSR	Upload CSR
	Querying a Private Key	Query the private key.

## Managing Private Certificates

API	Description
<a href="#">Managing private CAs</a>	Manage private CAs, including creating, querying, and deleting private CAs.
<a href="#">Managing private certificates</a>	Manage private certificates, including creating, querying, and deleting private certificates.
<a href="#">Revoking a certificate</a>	Revoke certificates, including creating an agency, querying an agency, and querying the OBS bucket list.

# 3 Calling APIs

## 3.1 Making an API Request

This section describes the structure of a REST API request, and uses the IAM API for [obtaining a user token](#) as an example to demonstrate how to call an API. The obtained token can then be used to authenticate the calling of other APIs.

### Request URI

A request URI is in the following format:

**{URI-scheme} :// {Endpoint} / {resource-path} ? {query-string}**

Although a request URI is included in the request header, most programming languages or frameworks require the request URI to be transmitted separately.

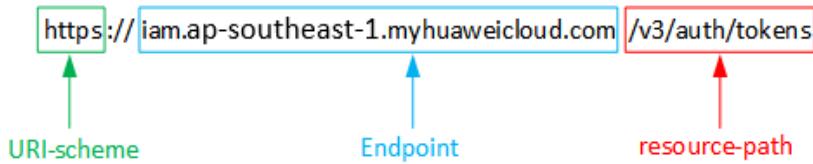

- **URI-scheme:**  
Protocol used to transmit requests. All APIs use HTTPS.
- **Endpoint:**  
Domain name or IP address of the server bearing the REST service. The endpoint varies between services in different regions. It can be obtained from [Regions and Endpoints](#).  
For example, the endpoint of IAM in region **CN-Hong Kong** is **iam.ap-southeast-1.myhuaweicloud.com**.
- **resource-path:**  
Access path of an API for performing a specified operation. Obtain the path from the URI of an API. For example, the **resource-path** of the API used to obtain a user token is **/v3/auth/tokens**.
- **query-string:**  
Query parameter, which is optional. Ensure that a question mark (?) is included before each query parameter that is in the format of "Parameter name=Parameter value". For example, **?limit=10** indicates that a maximum of 10 data records will be displayed.

For example, to obtain an IAM token in the **CN-Hong Kong** region, obtain the endpoint of IAM ([iam.ap-southeast-1.myhuaweicloud.com](http://iam.ap-southeast-1.myhuaweicloud.com)) for this region and

the **resource-path** (`/v3/auth/tokens`) in the URI of the API used to [obtain a user token](#). Then, construct the URI as follows:

```
https://iam.ap-southeast-1.myhuaweicloud.com/v3/auth/tokens
```

**Figure 3-1** Example URI

**NOTE**

To simplify the URI display in this document, each API is provided only with a **resource-path** and a request method. The **URI-scheme** of all APIs is **HTTPS**, and the endpoints of all APIs in the same region are identical.

## Request Methods

The HTTP protocol defines the following request methods that can be used to send a request to the server:

- **GET**: requests the server to return specified resources.
- **PUT**: requests the server to update specified resources.
- **POST**: requests the server to add resources or perform special operations.
- **DELETE**: requests the server to delete specified resources, for example, an object.
- **HEAD**: same as GET except that the server must return only the response header.
- **PATCH**: requests the server to update partial content of a specified resource. If the resource does not exist, a new resource will be created.

For example, in the case of the API used to [obtain a user token](#), the request method is POST. The request is as follows:

```
POST https://iam.ap-southeast-1.myhuaweicloud.com/v3/auth/tokens
```

## Request Header

You can also add additional header fields to a request, such as the fields required by a specified URI or HTTP method. For example, to request for the authentication information, add **Content-Type**, which specifies the request body type.

Common request header fields are as follows:

- **Content-Type**: specifies the request body type or format. This field is mandatory and its default value is **application/json**. Other values of this field will be provided for specific APIs if any.
- **X-Auth-Token**: specifies a user token only for token-based API authentication. The user token is a response to the API used to [obtain a user token](#). This API is the only one that does not require authentication.

#### NOTE

In addition to supporting token-based authentication, APIs also support authentication using access key ID/secret access key (AK/SK). During AK/SK-based authentication, an SDK is used to sign the request, and the **Authorization** (signature information) and **X-Sdk-Date** (time when the request is sent) header fields are automatically added to the request.

For more information, see AK/SK-based Authentication.

The API used to [obtain a user token](#) does not require authentication. Therefore, only the **Content-Type** field needs to be added to requests for calling the API. An example of such requests is as follows:

```
POST https://iam.ap-southeast-1.myhuaweicloud.com/v3/auth/tokens
Content-Type: application/json
```

## Request Body

The body of a request is often sent in a structured format as specified in the **Content-Type** header field. The request body transfers content except the request header.

The request body varies between APIs. Some APIs do not require the request body, such as the APIs requested using the GET and DELETE methods.

In the case of the API used to [obtain a user token](#), the request parameters and parameter description can be obtained from the API request. The following provides an example request with a body included. Set **username** to the name of a user, **domainname** to the name of the account that the user belongs to, **\*\*\*\*\*** to the user's login password, and **xxxxxxxxxxxxxx** to the project name. You can learn more information about projects from [Regions and Endpoints](#). Check the value of the **Region** column.

#### NOTE

The **scope** parameter specifies where a token takes effect. You can set **scope** to an account or a project under an account. In the following example, the token takes effect only for the resources in a specified project. For more information about this API, see [Obtaining a User Token](#).

```
POST https://iam.ap-southeast-1.myhuaweicloud.com/v3/auth/tokens
Content-Type: application/json
{
    "auth": {
        "identity": {
            "methods": [
                "password"
            ],
            "password": {
                "user": {
                    "name": "username",
                    "password": "*****",
                    "domain": {
                        "name": "domainname"
                    }
                }
            }
        },
        "scope": {
            "project": {
                "name": "xxxxxxxxxxxxxx"
            }
        }
    }
}
```

```
    }
```

If all data required for the API request is available, you can send the request to call the API through [curl](#), [Postman](#), or coding. In the response to the API used to obtain a user token, **x-subject-token** is the desired user token. This token can then be used to authenticate the calling of other APIs.

## 3.2 Authentication

Requests for calling an API can be authenticated using either of the following methods:

- Token-based authentication: Requests are authenticated using a token.
- AK/SK authentication: Requests are encrypted using AK/SK pairs. This method is recommended because it provides higher security than token-based authentication.

### Token-based Authentication

#### NOTE

- The validity period of a token is 24 hours. When using a token for authentication, cache it to prevent frequently calling the IAM API used to obtain a user token.
- Ensure that the token is valid when you use it. Using a token that will soon expire may cause API calling failures.

A token specifies temporary permissions in a computer system. During API authentication using a token, the token is added to requests to get permissions for calling the API.

You can [obtain a token](#) by calling an API. A project-level token is required for calling DEW APIs. When calling an API to obtain a user token, set **project** in **auth.scope** in the request body, as shown in the following example.

```
{
  "auth": {
    "identity": {
      "methods": [
        "password"
      ],
      "password": {
        "user": {
          "name": "username",
          "password": "*****",
          "domain": {
            "name": "domainname"
          }
        }
      }
    },
    "scope": {
      "project": {
        "name": "xxxxxxx"
      }
    }
  }
}
```

After a token is obtained, the **X-Auth-Token** header field must be added to requests to specify the token when calling other APIs. For example, if the token is **ABCDEFG....**, add **X-Auth-Token: ABCDEFG....** to a request as follows:

```
POST https://iam.ap-southeast-1.myhuaweicloud.com/v3.0/OS-USER/users
Content-Type: application/json
X-Auth-Token: ABCDEFG....
```

## AK/SK-based Authentication

### NOTE

- AK/SK-based authentication supports API requests with a body not larger than 12 MB. For API requests with a larger body, token-based authentication is recommended.
- You can use the AK/SK in a permanent or temporary access key. The **X-Security-Token** field must be configured if the AK/SK in a temporary access key is used, and the field value is **security\_token** of the temporary access key.

In AK/SK-based authentication, AK/SK is used to sign requests and the signature is then added to the requests for authentication.

- AK: access key ID, which is a unique identifier used in conjunction with a secret access key to sign requests cryptographically.
- SK: secret access key used in conjunction with an AK to sign requests cryptographically. It identifies a request sender and prevents the request from being modified.

In AK/SK-based authentication, you can use an AK/SK to sign requests based on the signature algorithm or use the signing SDK to sign requests. For details about how to sign requests and use the signing SDK, see [API Signature Guide](#).

---

### NOTICE

The signing SDK is only used for signing requests and is different from the SDKs provided by services.

---

## 3.3 Response

### Status Code

After sending a request, you will receive a response, including a status code, response header, and response body.

A status code is a group of digits, ranging from 1xx to 5xx. It indicates the status of a request. For more information, see [Status Code](#).

For example, if status code **201** is returned for calling the API used to [obtain a user token](#), the request is successful.

### Response Header

A response header corresponds to a request header, for example, **Content-Type**.

**Figure 3-2** shows the response header for the API of **obtaining a user token**, in which **x-subject-token** is the desired user token. This token can then be used to authenticate the calling of other APIs.

**Figure 3-2** Header of the response to the request for obtaining a user token

```
connection → keep-alive
content-type → application/json
date → Tue, 12 Feb 2019 06:52:13 GMT
server → Web Server
strict-transport-security → max-age=31536000; includeSubdomains;
transfer-encoding → chunked
via → proxy A
x-content-type-options → nosniff
x-download-options → noopener
x-frame-options → SAMEORIGIN
x-iam-trace-id → 218d45ab-d674-4995-af3a-2d0255ba41b5
x-subject-token
→ MIIYQyJKoZIhvNAQcCiIYTCCGECAQExDTALBgJhgkBZQMEAegEwgharBgkqhkiG9w0BBwGgg hacBIWmHsidG9rZW4iOnsiZXhwaxJlc19hdC16ijlwMTktMDitMTNUMDj3Kjs6gKnpVNrbW2eZ5eb78SZOkqjACgkIq01wi4JlGzrpdi8LGXK5txldfq4lqHCYb8P4NaY0NYejcAgz/VeFIytLWT1GSO0zxKZmlQHQj82HBqHdgIZ09fuEbL5dMhdavj+33wElxHRC9I87o+k9-j+CMZSEB7bUGd5Uj6eRASX1jipPEGA270g1Fr0ooL6jqglFkNPQuFSOU8+uSstVwRtNfsC+qTp22Rkd5MCqFGQ8LcuUxC3a+9CMBnOintWW7oeRUvhVpxk8pxiX1wTEboXRzT6MUbpvGw-oPNFYxjECKnoH3HRozv0vN--n5d6Nbkg==

x-xss-protection → 1; mode=block;
```

## (Optional) Response Body

A response body is generally returned in a structured format, corresponding to the **Content-Type** in the response header, and is used to transfer content other than the response header.

The following shows part of the response body for the API to **obtain a user token**. The following describes part of the response body.

```
{
  "token": {
    "expires_at": "2019-02-13T06:52:13.855000Z",
    "methods": [
      "password"
    ],
    "catalog": [
      {
        "endpoints": [
          {
            "region_id": "xxxxxxxx",
            ....
```

If an error occurs during API calling, the system returns an error code and a message to you. The following shows the format of an error response body:

```
{
  "error": {
    "message": "The request you have made requires authentication.",
    "title": "Unauthorized"
  }
}
```

In the preceding information, **error\_code** is an error code, and **error\_msg** describes the error.

# 4 API

## 4.1 Managing SSL Certificates

### 4.1.1 Certificate Application Management

#### 4.1.1.1 Apply for a certificate.

##### Function

This API is used to apply for a certificate.

##### URI

POST /v3/scm/certificates/{certificate\_id}/apply

**Table 4-1** Path Parameters

Parameter	Mandatory	Type	Description
certificate_id	Yes	String	Certificate ID. Minimum: <b>16</b> Maximum: <b>16</b>

## Request Parameters

**Table 4-2** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: <b>32</b> Maximum: <b>2097152</b>

**Table 4-3** Request body parameters

Parameter	Mandatory	Type	Description
domain	Yes	String	Domain name bound to a certificate. <ul style="list-style-type: none"><li>• If you purchase a single-domain or wildcard-domain certificate, enter a single domain name or wildcard domain name.</li><li>• If you purchase a multi-domain certificate, you need to select a domain name as the primary domain name.</li></ul> Example: www.example.com Minimum: <b>0</b> Maximum: <b>255</b>

Parameter	Mandatory	Type	Description
sans	No	String	<p>Additional domain name associated with a multi-domain certificate.</p> <p>This value is required only when the purchased certificate is a multi-domain certificate and the quota of additional domain names can be increased.</p> <p>Use semicolons (;) to separate multiple domain names.</p> <p>Example: www.example.com;www.example1.com;www.example2.com</p> <p>Minimum: <b>0</b></p> <p>Maximum: <b>4096</b></p>
csr	No	String	<p>Certificate CSR string, which must match the domain name.</p> <p>Minimum: <b>0</b></p> <p>Maximum: <b>5120</b></p>
company_name	No	String	<p>Company name. This parameter is mandatory for OV and EV certificates. The value contains 0 to 63 characters.</p> <p>Minimum: <b>0</b></p> <p>Maximum: <b>63</b></p>
company_unit	No	String	<p>Department name. The value contains 0 to 63 characters.</p> <p>Minimum: <b>0</b></p> <p>Maximum: <b>63</b></p>
company_province	No	String	<p>Province where the company is located. This parameter is mandatory for OV and EV certificates. The value contains 0 to 63 characters.</p> <p>Minimum: <b>0</b></p> <p>Maximum: <b>63</b></p>

Parameter	Mandatory	Type	Description
company_city	No	String	City where the company is located. This parameter is mandatory for OV and EV certificates. The value contains 0 to 63 characters. Minimum: <b>0</b> Maximum: <b>63</b>
country	No	String	Country code, which is mandatory for OV and EV certificates. The value must comply with the regular expression <b>[A-Za-z]{2}</b> . Minimum: <b>2</b> Maximum: <b>2</b>
applicant_name	Yes	String	Applicant name. Enter 4 to 100 characters. Only letters, digits, underscores (_), hyphens (-), periods (.), brackets, spaces, and commas (,) are allowed. Minimum: <b>0</b> Maximum: <b>63</b>
applicant_phone	Yes	String	Phone number of an applicant. Example: 13212345678 Minimum: <b>0</b> Maximum: <b>63</b>
applicant_email	Yes	String	Email of an applicant. Example: example@huawei.com Minimum: <b>0</b> Maximum: <b>256</b>
contact_name	No	String	Technical contact name. The value contains 0 to 63 characters. Minimum: <b>0</b> Maximum: <b>63</b>
contact_phone	No	String	Phone number of the technical contact. Example: 13212345678 Minimum: <b>0</b> Maximum: <b>63</b>

Parameter	Mandatory	Type	Description
contact_email	No	String	Email of a technical contact. Example: example@huawei.com Minimum: <b>0</b> Maximum: <b>256</b>
auto_dns_auth	No	Boolean	Whether to push DNS authentication information to Huawei Cloud DNS. <ul style="list-style-type: none"> <li>• true: Push</li> <li>• false: No push</li> </ul>
agree_privacy_protection	Yes	Boolean	Whether to agree with the privacy agreement. You can submit your certificate application only when this parameter is set to true. <ul style="list-style-type: none"> <li>• true: Agree to the privacy agreement.</li> <li>• false: Disagree with the privacy agreement.</li> </ul>

Parameter	Mandatory	Type	Description
domain_method	Yes	String	<p>Domain name verification method.</p> <ul style="list-style-type: none"><li>• DNS: You need to verify the domain ownership by resolving a specific DNS record on the domain name management platform.</li><li>• File: You need to create a specified file on the server to verify your ownership of the domain.</li><li>• Email: You can click the link and follow the directions in the email to verify ownership of the domain.</li></ul> <p>For DV and basic DV certificates (GeoTrust entry-level SSL certificates and DigiCert free SSL certificates), DNS is supported for verification by default.</p> <p>IP address (public IP address) certificates can be verified only by files. File verification is supported by only IP address certificates.</p> <p>Minimum: <b>0</b></p> <p>Maximum: <b>32</b></p>
key_algorithm	No	String	<p>Key algorithm. The default value is RSA_2048.</p> <p>Minimum: <b>0</b></p> <p>Maximum: <b>32</b></p>

## Response Parameters

Status code: 200

**Table 4-4** Response body parameters

Parameter	Type	Description
request_info	String	<p>Request result.</p> <p>Minimum: <b>0</b></p> <p>Maximum: <b>63</b></p>

**Status code: 401**

**Table 4-5** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-6** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-7** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>

Parameter	Type	Description
error_msg	String	Error information returned for an error request. Minimum: 0 Maximum: 1024

## Example Requests

```
{  
    "domain" : "www.test.com",  
    "company_name" : "Company XX",

### 4.1.1.2 Withdrawing a Certificate Application

#### Function

Withdraw the certificate application.

#### URI

POST /v3/scm/certificates/{certificate\_id}/cancel-cert

**Table 4-8** Path Parameters

Parameter	Mandatory	Type	Description
certificate_id	Yes	String	Certificate ID. Minimum: <b>16</b> Maximum: <b>16</b>

## Request Parameters

**Table 4-9** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API used to obtain a user token. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: <b>32</b> Maximum: <b>2097152</b>

## Response Parameters

**Status code: 200**

**Table 4-10** Response body parameters

Parameter	Type	Description
cert_id	String	Certificate ID. Minimum: <b>16</b> Maximum: <b>16</b>
message	String	Execution result. The value can be: success Minimum: <b>0</b> Maximum: <b>16</b>

**Status code: 401**

**Table 4-11** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>

Parameter	Type	Description
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

### Status code: 403

**Table 4-12** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

### Status code: 500

**Table 4-13** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

None

## Example Responses

### Status code: 200

Normal response.

```
{  
    "cert_id" : "scsxxxx",  
    "message" : "success"  
}
```

### 4.1.2 Certificate Tag Management

### 4.1.2.1 Querying the Certificate List by Tag

#### Function

Query the certificate list by tag.

#### URI

POST /v3/scm/{resource\_instances}/action

**Table 4-14** Path Parameters

Parameter	Mandatory	Type	Description
resource_instances	Yes	String	Resource instance. The value is resource_instances. Minimum: <b>18</b> Maximum: <b>18</b>

#### Request Parameters

**Table 4-15** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API used to obtain a user token. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: <b>32</b> Maximum: <b>2097152</b>

**Table 4-16** Request body parameters

Parameter	Mandatory	Type	Description
without_any_tag	No	Boolean	If this parameter is set to true, all resources without tags are queried. In this case, the <b>tags</b> , <b>tags_any</b> , <b>not_tags</b> , and <b>not_tags_any</b> fields are not required. <ul style="list-style-type: none"><li>• true</li><li>• false</li></ul>

Parameter	Mandatory	Type	Description
tags	No	Array of <a href="#">ScsTag</a> objects	<p>The list of tags.</p> <p>The resources to be queried contain tags specified in this field. Each resource can contain a maximum of 20 keys. Each tag key can have a maximum of 20 tag values. The tag value corresponding to each tag key can be an empty array but the structure cannot be missing. Each key must be unique, and each value for a key must be unique. The response returns resources containing all the specified tags. Keys are in the AND relationship and values in each key-value structure are in the OR relationship. If this parameter is not specified, all resources will be returned.</p> <p>Array Length: 1 - 20</p>
tags_any	No	Array of <a href="#">ScsTag</a> objects	<p>The list of tags.</p> <p>The instances to be queried contain any tag listed in <b>tags_any</b>. Each instance to be queried contains a maximum of 20 keys. Each tag key has a maximum of 20 tag values. The tag value corresponding to each tag key can be an empty array but the structure cannot be missing. Each key must be unique, and each value for a key must be unique. The response returns resources containing the tags in this list. Keys in this list are in an OR relationship and values in each key-value structure are also in an OR relationship. If no filtering condition is specified, full data is returned.</p> <p>Array Length: 1 - 20</p>

Parameter	Mandatory	Type	Description
not_tags	No	Array of <a href="#">ScsTag</a> objects	<p>The list of tags.</p> <p>The instances to be queried do not contain any tag listed in <b>not_tags</b>. Each instance to be queried contains a maximum of 20 keys. Each tag key has a maximum of 20 tag values. The tag value corresponding to each tag key can be an empty array but the structure cannot be missing. Keys must be unique and values of a key must be unique. The response returns instances containing no tag in this list. Keys are in the AND relationship and values in each key-value structure is in the OR relationship. If this parameter is not specified, all resources will be returned.</p> <p>Array Length: <b>1 - 20</b></p>
not_tags_any	No	Array of <a href="#">ScsTag</a> objects	<p>The list of tags.</p> <p>The instances to be queried do not contain all tags listed in not_tags_any. Each instance to be queried contains a maximum of 20 keys. Each tag key has a maximum of 20 tag values. The tag value corresponding to each tag key can be an empty array but the structure cannot be missing. Each key must be unique, and each value for a key must be unique. The response returns resources containing no tag in this list. Keys in this list are in the OR relationship and values in each key-value structure are also in the OR relationship. If no tag filtering criteria is specified, full data is returned.</p> <p>Array Length: <b>1 - 20</b></p>

Parameter	Mandatory	Type	Description
limit	No	Integer	<p>Number of certificate records on each page. The options are as follows:</p> <ul style="list-style-type: none"><li>• <b>10</b>: 10 certificate records can be displayed on each page.</li><li>• <b>20</b>: 20 certificate records can be displayed on each page.</li><li>• <b>50</b>: 50 certificate records can be displayed on each page.</li></ul> <p>Minimum: <b>10</b> Maximum: <b>50</b> Default: <b>10</b></p>
offset	No	Integer	<p>Specifies the offset. The query starts from the next piece of data indexed by this parameter.</p> <p>Minimum: <b>0</b> Default: <b>0</b></p>
action	No	String	<p>Operation type. Possible values are as follows:</p> <ul style="list-style-type: none"><li>• filter</li><li>• count: indicates the total number of records to be queried.</li></ul> <p>Minimum: <b>5</b> Maximum: <b>6</b></p>
matches	No	Array of <b>ScsMatch</b> objects	<p>Search field. key indicates the field to be matched, for example, resource_name. value indicates the matched value. The key is a fixed dictionary value and cannot contain duplicate keys or unsupported keys.</p> <p>Array Length: <b>0 - 10</b></p>

**Table 4-17 ScsTag**

Parameter	Mandatory	Type	Description
key	No	String	<p>Tag key. It can contain UTF-8 letters, digits, spaces, and the following characters: _ . : = + - @ Minimum: <b>1</b> Maximum: <b>128</b></p>
values	No	Array of strings	<p>Tag values. It can contain UTF-8 letters, digits, spaces, and the following special characters: _ . : = + - @ Minimum: <b>0</b> Maximum: <b>255</b> Array Length: <b>1 - 20</b></p>

**Table 4-18 ScsMatch**

Parameter	Mandatory	Type	Description
key	No	String	<p>Tag key. It can contain UTF-8 letters, digits, spaces, and the following characters: _ . : = + - @ Minimum: <b>1</b> Maximum: <b>128</b></p>
value	No	String	<p>Tag value. It can contain UTF-8 letters, digits, spaces, and the following characters: _ . : / = + - @ Minimum: <b>0</b> Maximum: <b>255</b></p>

## Response Parameters

**Status code: 200**

**Table 4-19** Response body parameters

Parameter	Type	Description
total_count	Integer	Total number of records Minimum: <b>0</b> Maximum: <b>100</b>
resources	Array of <b>TagResource</b> objects	Resource instance list. For details, see the data structure description of the <b>TagResource</b> field. Array Length: <b>0 - 100</b>

**Table 4-20** TagResource

Parameter	Type	Description
resource_id	String	Whether the certificate can be unsubscribed. Minimum: <b>0</b> Maximum: <b>63</b>
tags	Array of <b>ScsResourceTag</b> objects	Resource ID of the certificate. Array Length: <b>0 - 100</b>
resource_name	String	Number of wildcard domain names. Minimum: <b>0</b> Maximum: <b>63</b>
resource_detail	<b>resource_detail</b> object	Certificate resource details.

**Table 4-21** ScsResourceTag

Parameter	Type	Description
key	String	Tag key. Minimum: <b>0</b> Maximum: <b>128</b>
value	String	Tag value. Minimum: <b>0</b> Maximum: <b>255</b>

**Table 4-22** resource\_detail

Parameter	Type	Description
cert_id	String	Certificate ID. Minimum: <b>16</b> Maximum: <b>16</b>
cert_name	String	Certificate name. The value contains 3 to 63 characters. Minimum: <b>3</b> Maximum: <b>63</b>
domain	String	Domain name bound to a certificate. <ul style="list-style-type: none"><li>• If you purchase a single-domain or wildcard-domain certificate, enter a single domain name or wildcard domain name.</li><li>• If you purchase a multi-domain certificate, you need to select a domain name as the primary domain name.</li></ul> Example: www.example.com Minimum: <b>0</b> Maximum: <b>255</b>
cert_type	String	Certificate type. <ul style="list-style-type: none"><li>• OV_SSL_CERT: enterprise SSL certificate.</li><li>• EV_SSL_CERT: enhanced SSL certificate.</li></ul> Minimum: <b>0</b> Maximum: <b>32</b>
cert_brand	String	Certificate authority. GLOBALLYSIGN Minimum: <b>0</b> Maximum: <b>32</b>
domain_type	String	Zone type. <ul style="list-style-type: none"><li>• SINGLE_DOMAIN: single domain name.</li><li>• MULTI_DOMAIN: multi-domain name type.</li><li>• WILDCARD: wildcard domain name.</li></ul> Minimum: <b>0</b> Maximum: <b>32</b>

Parameter	Type	Description
purchase_period	Integer	Certificate validity period, in years. Minimum: <b>0</b> Maximum: <b>1000</b>
expired_time	String	Certificate expiration time, which is a timestamp in milliseconds. Minimum: <b>0</b> Maximum: <b>32</b>
order_status	String	Order status. Minimum: <b>0</b> Maximum: <b>32</b>
domain_num	Integer	Number of domain names. <ul style="list-style-type: none"> <li>If <b>domain_type</b> is set to <b>SINGLE_DOMAIN</b> or <b>WILDCARD</b>, the value is <b>1</b>.</li> <li>If <b>domain_type</b> is set to <b>MULTI_DOMAIN</b>, the value ranges from <b>2</b> to <b>250</b>.</li> </ul> Minimum: <b>1</b> Maximum: <b>250</b>
wildcard_number	Integer	Specifies the list of queried tags. If no tag is matched, an empty array is returned. Minimum: <b>1</b> Maximum: <b>100</b>
sans	String	Resource name. This parameter is an empty string by default. Minimum: <b>0</b> Maximum: <b>4096</b>
cert_des	String	Certificate description. Minimum: <b>0</b> Maximum: <b>32</b>
signature_algorithm	String	Additional domain name associated with the certificate Minimum: <b>0</b> Maximum: <b>32</b>
fail_reason	String	Failure cause. Minimum: <b>0</b> Maximum: <b>255</b>

Parameter	Type	Description
partner_order_id	String	Sequence number of an order. Minimum: <b>0</b> Maximum: <b>63</b>
push_support	Boolean	Whether a certificate can be pushed.
cert_issued_time	String	Time when a certificate is issued, in milliseconds. Minimum: <b>0</b> Maximum: <b>32</b>
resource_id	String	Resource ID. Minimum: <b>0</b> Maximum: <b>63</b>
unsubscribe_support	Boolean	Signature algorithm
origin_cert_id	String	Initial certificate ID. Minimum: <b>0</b> Maximum: <b>63</b>
renewal_cert_id	String	ID of the certificate to be renewed. Minimum: <b>0</b> Maximum: <b>63</b>
auto_renew_status	Integer	Auto-renewal status. Minimum: <b>0</b> Maximum: <b>100</b>
remain_cert_number	Integer	Number of remaining valid certificates. Minimum: <b>0</b> Maximum: <b>100</b>
auto_deploy_support	Boolean	Whether the certificate supports automatic deployment.

**Status code: 401**

**Table 4-23** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-24** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-25** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

### 4.1.2.2 Creating or Deleting Tags in Batches

#### Function

Create or delete tags in batches.

#### URI

POST /v3/scm/{resource\_id}/tags/action

**Table 4-26 Path Parameters**

Parameter	Mandatory	Type	Description
resource_id	Yes	String	Certificate ID. Minimum: <b>16</b> Maximum: <b>16</b>

## Request Parameters

**Table 4-27** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API used to obtain a user token. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: <b>32</b> Maximum: <b>2097152</b>

**Table 4-28** Request body parameters

Parameter	Mandatory	Type	Description
action	Yes	String	Label operation ID. • create: Create a user. • delete: Delete the task. Minimum: <b>6</b> Maximum: <b>6</b>
tags	No	Array of <b>ScsResourceTag</b> objects	Tag list, which is the value pairs of tag keys and values. Array Length: <b>1 - 20</b>

**Table 4-29** ScsResourceTag

Parameter	Mandatory	Type	Description
key	No	String	Tag key. Minimum: <b>0</b> Maximum: <b>128</b>
value	No	String	Tag value. Minimum: <b>0</b> Maximum: <b>255</b>

## Response Parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-32** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-33** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

```
{  
    "action" : "create",  
    "tags" : [ {  
        "key" : "key1",  
        "value" : "value1"  
    }, {  
        "key" : "key2",  
        "value" : "value2"  
    } ]  
}
```

## Example Responses

### Status code: 200

Normal response.

```
{  
    "desc" : "success"  
}
```

### Status code: 401

Authentication failed.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 403

Access denied.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 500

Failed to complete the request because of an internal server error.

```
{  
    "error_code" : "SCM.XXX",  
}
```

```
        "error_msg" : "XXX"  
    }
```

## Status Codes

Status Code	Description
200	Normal response.
401	Authentication failed.
403	Access denied.
404	Access page not found.
500	Failed to complete the request because of an internal server error.

## Error Codes

See [Error Codes](#).

### 4.1.2.3 Creating a Tag

#### Function

Create a tag.

#### URI

POST /v3/scm/{resource\_id}/tags

**Table 4-34** Path Parameters

Parameter	Mandatory	Type	Description
resource_id	Yes	String	Certificate ID. Minimum: <b>16</b> Maximum: <b>16</b>

## Request Parameters

**Table 4-35** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API used to obtain a user token. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: <b>32</b> Maximum: <b>2097152</b>

**Table 4-36** Request body parameters

Parameter	Mandatory	Type	Description
tag	Yes	ScsResourceTag object	Label.

**Table 4-37** ScsResourceTag

Parameter	Mandatory	Type	Description
key	No	String	Tag key. Minimum: <b>0</b> Maximum: <b>128</b>
value	No	String	Tag value. Minimum: <b>0</b> Maximum: <b>255</b>

## Response Parameters

Status code: 200

**Table 4-38** Response body parameters

Parameter	Type	Description
desc	String	Request result. Minimum: <b>0</b> Maximum: <b>63</b>

**Status code: 401**

**Table 4-39** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-40** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-41** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>

Parameter	Type	Description
error_msg	String	Error information returned for an error request. Minimum: 0 Maximum: 1024

## Example Requests

```
{  
  "tag": {  
    "key": "key1",  
    "value": "value1"  
  }  
}
```

## Example Responses

### Status code: 200

Normal response.

```
{  
  "desc": "success"  
}
```

### Status code: 401

Authentication failed.

```
{  
  "error_code": "SCM.XXX",  
  "error_msg": "XXX"  
}
```

### Status code: 403

Access denied.

```
{  
  "error_code": "SCM.XXX",  
  "error_msg": "XXX"  
}
```

### Status code: 500

Failed to complete the request because of an internal server error.

```
{  
  "error_code": "SCM.XXX",  
  "error_msg": "XXX"  
}
```

## Status Codes

Status Code	Description
200	Normal response.

Status Code	Description
401	Authentication failed.
403	Access denied.
404	Access page not found.
500	Failed to complete the request because of an internal server error.

## Error Codes

See [Error Codes](#).

### 4.1.2.4 Querying the Tag List by Certificate ID

#### Function

Query the tag list based on the certificate ID.

#### URI

GET /v3/scm/{resource\_id}/tags

**Table 4-42** Path Parameters

Parameter	Mandatory	Type	Description
resource_id	Yes	String	Certificate ID. Minimum: <b>16</b> Maximum: <b>16</b>

#### Request Parameters

**Table 4-43** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API used to obtain a user token. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: <b>32</b> Maximum: <b>2097152</b>

## Response Parameters

**Status code: 200**

**Table 4-44** Response body parameters

Parameter	Type	Description
tags	Array of <a href="#">ScsResourceTag</a> objects	Tag list, which is the value pairs of tag keys and values. Array Length: <b>1 - 20</b>

**Table 4-45** ScsResourceTag

Parameter	Type	Description
key	String	Tag key. Minimum: <b>0</b> Maximum: <b>128</b>
value	String	Tag value. Minimum: <b>0</b> Maximum: <b>255</b>

**Status code: 401**

**Table 4-46** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-47** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

### Status code: 500

**Table 4-48** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

None

## Example Responses

### Status code: 200

Normal response.

```
{  
  "tags" : [ {  
    "key" : "key1",  
    "value" : "value1"  
  }, {  
    "key" : "key2",  
    "value" : "value2"  
  } ]  
}
```

### Status code: 401

Authentication failed.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

#### Status code: 403

Access denied.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

#### Status code: 500

Failed to complete the request because of an internal server error.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
200	Normal response.
401	Authentication failed.
403	Access denied.
404	Access page not found.
500	Failed to complete the request because of an internal server error.

## Error Codes

See [Error Codes](#).

### 4.1.2.5 Querying the List of All Tags

#### Function

Query the list of all tags.

#### URI

GET /v3/scm/tags

## Request Parameters

**Table 4-49** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	<p>User token.</p> <p>It can be obtained by calling the IAM API used to obtain a user token. The value of <b>X-Subject-Token</b> in the response header is the user token.</p> <p>Minimum: <b>32</b></p> <p>Maximum: <b>2097152</b></p>

## Response Parameters

**Status code: 200**

**Table 4-50** Response body parameters

Parameter	Type	Description
tags	Array of <b>ScsTag</b> objects	<p>Tag list, which is the value pairs of tag keys and values.</p> <p>Array Length: <b>1 - 20</b></p>

**Table 4-51** ScsTag

Parameter	Type	Description
key	String	<p>Tag key.</p> <p>It can contain UTF-8 letters, digits, spaces, and the following characters: _ . : = + - @</p> <p>Minimum: <b>1</b></p> <p>Maximum: <b>128</b></p>
values	Array of strings	<p>Tag values.</p> <p>It can contain UTF-8 letters, digits, spaces, and the following special characters: _ . : = + - @</p> <p>Minimum: <b>0</b></p> <p>Maximum: <b>255</b></p> <p>Array Length: <b>1 - 20</b></p>

**Status code: 401**

**Table 4-52** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-53** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-54** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>

Parameter	Type	Description
error_msg	String	Error information returned for an error request. Minimum: 0 Maximum: 1024

## Example Requests

None

## Example Responses

### Status code: 200

Normal response.

```
{  
  "tags" : [ {  
    "key" : "key1",  
    "values" : [ "value1", "value2" ]  
  }, {  
    "key" : "key2",  
    "values" : [ "value1", "value2" ]  
  } ]  
}
```

### Status code: 401

Authentication failed.

```
{  
  "error_code" : "SCM.XXX",  
  "error_msg" : "XXX"  
}
```

### Status code: 403

Access denied.

```
{  
  "error_code" : "SCM.XXX",  
  "error_msg" : "XXX"  
}
```

### Status code: 500

Failed to complete the request because of an internal server error.

```
{  
  "error_code" : "SCM.XXX",  
  "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
200	Normal response.
401	Authentication failed.
403	Access denied.
404	Access page not found.
500	Failed to complete the request because of an internal server error.

## Error Codes

### 4.1.3 Certificate Order Management

#### 4.1.3.1 Purchasing an SSL Certificate

##### Function

This API is used to purchase an SSL certificate.

##### URI

POST /v3/scm/certificates/buy

##### Request Parameters

**Table 4-55** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: 32 Maximum: 2097152

**Table 4-56** Request body parameters

Parameter	Mandatory	Type	Description
cert_brand	Yes	String	Certificate authority. The options are as follows: <ul style="list-style-type: none"><li>• GEOTRUST</li><li>• GLOBALENGINE</li><li>• SYMANTEC</li><li>• CFCA</li><li>• TRUSTASIA</li><li>• VTRUS</li></ul> Minimum: <b>0</b> Maximum: <b>32</b>
cert_type	Yes	String	Certificate type. The options are as follows: <ul style="list-style-type: none"><li>• DV_SSL_CERT</li><li>• DV_SSL_CERT_BASIC</li><li>• EV_SSL_CERT</li><li>• EV_SSL_CERT_PRO</li><li>• OV_SSL_CERT</li><li>• OV_SSL_CERT_PRO</li></ul> Minimum: <b>0</b> Maximum: <b>32</b>
domain_type	Yes	String	Domain name type. The options are as follows: <ul style="list-style-type: none"><li>• SINGLE_DOMAIN: single domain name.</li><li>• MULTI_DOMAIN: multi-domain name type.</li><li>• WILDCARD: wildcard domain name.</li></ul> Minimum: <b>0</b> Maximum: <b>32</b>
effective_time	Yes	Integer	Certificate validity period, in years. Minimum: <b>1</b> Maximum: <b>3</b>

Parameter	Mandatory	Type	Description
domain_numbers	Yes	Integer	<p>Number of domain names.</p> <ul style="list-style-type: none"> <li>If <b>domain_type</b> is set to <b>SINGLE_DOMAIN</b> or <b>WILDCARD</b>, the value is <b>1</b>.</li> <li>If <b>domain_type</b> is set to <b>MULTI_DOMAIN</b>, the value ranges from <b>2 to 100</b>.</li> </ul> <p>Minimum: <b>1</b> Maximum: <b>100</b></p>
order_number	Yes	Integer	<p>Number of purchased certificates. The value ranges from 1 to 100.</p> <p>Minimum: <b>1</b> Maximum: <b>100</b></p>
agree_privacy_protection	Yes	Boolean	<p>Whether to agree to the privacy agreement. The value can only be true.</p> <ul style="list-style-type: none"> <li>true: agree</li> <li>false: disagree</li> </ul>
primary_domain_type	No	String	<p>Primary domain name type in multiple domain names. The value can be:</p> <ul style="list-style-type: none"> <li><b>SINGLE_DOMAIN</b>: primary single domain name</li> <li><b>WILDCARD_DOMAIN</b>: primary wildcard domain name</li> </ul> <p>Minimum: <b>0</b> Maximum: <b>63</b></p>
single_domain_number	No	Integer	<p>Number of additional single domain names.</p> <p>Minimum: <b>1</b> Maximum: <b>100</b></p>
wildcard_domain_number	No	Integer	<p>Number of additional wildcard domain names.</p> <p>Minimum: <b>1</b> Maximum: <b>100</b></p>
is_auto_pay	No	Boolean	<p>Whether to enable auto payment.</p> <ul style="list-style-type: none"> <li>true: enable</li> <li>false: disable</li> </ul>

Parameter	Mandatory	Type	Description
order_id	No	String	Order ID. Used only in combined purchase scenarios. Minimum: <b>0</b> Maximum: <b>63</b>
tags	No	Array of <a href="#">ScsResourceTag</a> objects	Tags. Array Length: <b>0 - 10</b>

**Table 4-57 ScsResourceTag**

Parameter	Mandatory	Type	Description
key	No	String	Tag key. Minimum: <b>0</b> Maximum: <b>128</b>
value	No	String	Tag value. Minimum: <b>0</b> Maximum: <b>255</b>

## Response Parameters

Status code: 200

**Table 4-58 Response body parameters**

Parameter	Type	Description
order_id	String	Order ID. Minimum: <b>0</b> Maximum: <b>63</b>
cert	Array of <a href="#">CertDetail</a> objects	For details, see parameter description of the CertDetail field. Array Length: <b>0 - 1000</b>

**Table 4-59** CertDetail

Parameter	Type	Description
cert_id	String	Certificate ID. Minimum: <b>16</b> Maximum: <b>16</b>

**Status code: 401**

**Table 4-60** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-61** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-62** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

```
{  
    "cert_brand" : "GLOBALSIGN",  
    "cert_type" : "OV_SSL_CERT",  
    "domain_type" : "MULTI_DOMAIN",  
    "effective_time" : 1,  
    "domain_numbers" : 5,  
    "order_number" : 1,  
    "agree_privacy_protection" : true  
}
```

## Example Responses

### Status code: 200

Normal return.

```
{  
    "order_id" : "CS1803192259ROA8U",  
    "cert" : [ {  
        "cert_id" : "scs1481110651012"  
    } ]  
}
```

### Status code: 401

Authentication failed.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 403

Access denied.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 500

Failed to complete the request because of an internal server error.

```
{  
    "error_code": "SCM.XXX",  
    "error_msg": "XXX"  
}
```

## Status Codes

Status Code	Description
200	Normal return.
401	Authentication failed.
403	Access denied.
404	Access page not found.
500	Failed to complete the request because of an internal server error.

## Error Codes

See [Error Codes](#).

## 4.1.4 CSR Management

### 4.1.4.1 Creating a CSR

#### Function

Create a CSR.

#### URI

POST /v3/scm/csr

#### Request Parameters

**Table 4-63** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API used to obtain a user token. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: 32 Maximum: 2097152

**Table 4-64** Request body parameters

Parameter	Mandatory	Type	Description
name	Yes	String	User-defined CSR name. Minimum: <b>0</b> Maximum: <b>63</b>
domain_name	Yes	String	Domain name bound to the CSR. If you want to use the CSR, ensure the domain name bound to a certificate contains the domain name set here. Minimum: <b>0</b> Maximum: <b>63</b>
sans	No	String	Additional domain name bound to the CSR. Minimum: <b>0</b> Maximum: <b>255</b>
private_key_algo	Yes	String	Private key algorithm. The value can be: <ul style="list-style-type: none"><li>• RSA_2048</li><li>• RSA_3072</li><li>• RSA_4096</li><li>• EC_P256</li><li>• EC_P384</li><li>• SM2</li></ul> Minimum: <b>0</b> Maximum: <b>63</b>
usage	Yes	String	CSR usage. The value can be: <ul style="list-style-type: none"><li>• PERSONAL: individual certificate</li><li>• ENTERPRISE: enterprise certificate</li></ul> Minimum: <b>0</b> Maximum: <b>255</b>
company_country	No	String	Country. This parameter is mandatory when usage is set to ENTERPRISE. Example value: CN. Minimum: <b>0</b> Maximum: <b>255</b>

Parameter	Mandatory	Type	Description
company_province	No	String	Province. This parameter is mandatory when usage is set to ENTERPRISE. Example: Beijing. Minimum: <b>0</b> Maximum: <b>255</b>
company_city	No	String	City. This parameter is mandatory when usage is set to ENTERPRISE. Example: Beijing. Minimum: <b>0</b> Maximum: <b>255</b>
company_name	No	String	Company name. This parameter is mandatory when usage is set to ENTERPRISE. Minimum: <b>0</b> Maximum: <b>255</b>

## Response Parameters

Status code: 201

**Table 4-65** Response body parameters

Parameter	Type	Description
id	String	CSR ID. Minimum: <b>0</b> Maximum: <b>63</b>
name	String	User-defined CSR name. Minimum: <b>0</b> Maximum: <b>63</b>
domain_name	String	Domain name. Minimum: <b>0</b> Maximum: <b>63</b>
sans	String	Additional domain name bound to the CSR. Minimum: <b>0</b> Maximum: <b>255</b>

Parameter	Type	Description
private_key_algo	String	<p>Key algorithm type. The options are as follows:</p> <ul style="list-style-type: none"> <li>• RSA_2048</li> <li>• RSA_3072</li> <li>• RSA_4096</li> <li>• EC_P256</li> <li>• EC_P384</li> <li>• SM2</li> </ul> <p>Minimum: <b>0</b> Maximum: <b>63</b></p>
usage	String	<p>CSR usage. The value can be:</p> <ul style="list-style-type: none"> <li>• PERSONAL: individual certificate</li> <li>• ENTERPRISE: enterprise certificate</li> </ul> <p>Minimum: <b>0</b> Maximum: <b>255</b></p>
company_country	String	<p>Country. This parameter is mandatory when usage is set to ENTERPRISE.</p> <p>Minimum: <b>0</b> Maximum: <b>255</b></p>
company_province	String	<p>Province. This parameter is mandatory when usage is set to ENTERPRISE.</p> <p>Minimum: <b>0</b> Maximum: <b>255</b></p>
company_city	String	<p>City. This parameter is mandatory when usage is set to ENTERPRISE.</p> <p>Minimum: <b>0</b> Maximum: <b>255</b></p>
company_name	String	<p>Company name. This parameter is mandatory when usage is set to ENTERPRISE.</p> <p>Minimum: <b>0</b> Maximum: <b>255</b></p>
create_time	Long	<p>CSR creation time.</p> <p>Minimum: <b>13</b> Maximum: <b>20</b></p>
update_time	Long	<p>CSR update time.</p> <p>Minimum: <b>13</b> Maximum: <b>20</b></p>

**Status code: 401**

**Table 4-66** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-67** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-68** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>

Parameter	Type	Description
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

```
{
  "name" : "CSRxxxx",
  "domain_name" : "xxx.com",
  "private_key_algo" : "RSA_2048",
  "usage" : "ENTERPRISE"
}
```

## Example Responses

### Status code: 201

Normal response.

```
{
  "id" : "48e392628b0f47769e47d91acc7654a5",
  "name" : "xxxx",
  "domain_name" : "xxx.com",

  "private_key_algo" : "RSA_2048",
  "usage" : "ENTERPRISE",
  "company_country" : "CN",
  "company_province" : "Beijing",
  "company_city" : "Beijing",
  "company_name" : "company",
  "create_time" : 1735804566545,
  "update_time" : 1735804566545
}
```

### Status code: 401

Authentication failed.

```
{
  "error_code" : "SCM.XXX",
  "error_msg" : "XXX"
}
```

### Status code: 403

Access denied.

```
{
  "error_code" : "SCM.XXX",
  "error_msg" : "XXX"
}
```

### Status code: 500

Failed to complete the request because of an internal server error.

```
{
  "error_code" : "SCM.XXX",
  "error_msg" : "XXX"
}
```

## Status Codes

Status Code	Description
201	Normal response.
401	Authentication failed.
403	Access denied.
404	Access page not found.
500	Failed to complete the request because of an internal server error.

## Error Codes

See [Error Codes](#).

### 4.1.4.2 Querying the CSR List

#### Function

Query the CSR list.

#### URI

GET /v3/scm/csr

**Table 4-69** Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	<p>Number of certificate records on each page. The options are as follows:</p> <ul style="list-style-type: none"><li>• <b>10</b>: 10 certificate records can be displayed on each page.</li><li>• <b>20</b>: 20 certificate records can be displayed on each page.</li><li>• <b>50</b>: 50 certificate records can be displayed on each page.</li></ul> <p>Minimum: <b>10</b> Maximum: <b>50</b> Default: <b>10</b></p>

Parameter	Mandatory	Type	Description
offset	No	Integer	Offset. Minimum: <b>0</b> Maximum: <b>100</b> Default: <b>0</b>
name	No	String	CSR name. Minimum: <b>0</b> Maximum: <b>32</b>
private_key_algo	No	String	Key algorithm type. The value can be: <ul style="list-style-type: none"> <li>• RSA_2048</li> <li>• RSA_3072</li> <li>• RSA_4096</li> <li>• EC_P256</li> <li>• EC_P384</li> <li>• SM2</li> </ul> Minimum: <b>0</b> Maximum: <b>64</b>

## Request Parameters

**Table 4-70** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API used to obtain a user token. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: <b>32</b> Maximum: <b>2097152</b>

## Response Parameters

**Status code: 200**

**Table 4-71** Response body parameters

Parameter	Type	Description
csr_list	Array of <b>CSRResponseBody</b> objects	CSR list. For details, see the data structure description of the <b>CSRResponseBody</b> field. Array Length: <b>0 - 1000</b>
total	Integer	Number of CSRs. Minimum: <b>0</b> Maximum: <b>10000</b>

**Table 4-72** CSRResponseBody

Parameter	Type	Description
id	String	CSR ID Minimum: <b>16</b> Maximum: <b>16</b>
name	String	CSR name Minimum: <b>3</b> Maximum: <b>63</b>
csr	String	CSR content Minimum: <b>3</b> Maximum: <b>255</b>
domain_name	String	Domain name bound to the CSR Minimum: <b>1</b> Maximum: <b>255</b>
sans	String	Additional domain name bound to the CSR Minimum: <b>1</b> Maximum: <b>4096</b>
private_key_algo	String	Key algorithm Minimum: <b>0</b> Maximum: <b>64</b>
usage	String	CSR usage Minimum: <b>0</b> Maximum: <b>64</b>

Parameter	Type	Description
company_country	String	Country Minimum: <b>1</b> Maximum: <b>128</b>
company_province	String	Province Minimum: <b>1</b> Maximum: <b>255</b>
company_city	String	City Minimum: <b>1</b> Maximum: <b>32</b>
company_name	String	Company name Minimum: <b>1</b> Maximum: <b>128</b>
create_time	Long	CSR creation time. Minimum: <b>13</b> Maximum: <b>20</b>

**Status code: 401****Table 4-73** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-74** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-75** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

### 4.1.4.6 Upload CSR

#### Function

Upload CSR

#### URI

POST /v3/scm/csr/upload

## Request Parameters

**Table 4-94** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API used to obtain a user token. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: <b>32</b> Maximum: <b>2097152</b>

**Table 4-95** Request body parameters

Parameter	Mandatory	Type	Description
name	Yes	String	User-defined CSR name. Minimum: <b>0</b> Maximum: <b>63</b>
csr	Yes	String	Certificate CSR file Minimum: <b>0</b> Maximum: <b>2555</b>
private_key	No	String	Certificate private key file Minimum: <b>0</b> Maximum: <b>63</b>

## Response Parameters

Status code: 200

**Table 4-96** Response body parameters

Parameter	Type	Description
id	String	CSR ID. Minimum: <b>32</b> Maximum: <b>32</b>
name	String	User-defined CSR name. Minimum: <b>1</b> Maximum: <b>63</b>

Parameter	Type	Description
create_time	Long	CSR creation time. Minimum: <b>13</b> Maximum: <b>20</b>

**Status code: 401****Table 4-97** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403****Table 4-98** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

## 4.1.5 Certificate Lifecycle Management

### 4.1.5.1 Querying the Certificate List

#### Function

This API is used to query the certificate list by certificate name or bound domain name.

#### URI

GET /v3/scm/certificates

**Table 4-106** Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	<p>Number of certificate records on each page. The options are as follows:</p> <ul style="list-style-type: none"><li>• <b>10</b>: 10 certificate records can be displayed on each page.</li><li>• <b>20</b>: 20 certificate records can be displayed on each page.</li><li>• <b>50</b>: 50 certificate records can be displayed on each page.</li></ul> <p>Minimum: <b>10</b> Maximum: <b>50</b> Default: <b>10</b></p>
offset	No	Integer	<p>Query offset.</p> <p>Minimum: <b>0</b> Maximum: <b>100</b> Default: <b>0</b></p>
sort_dir	No	String	<p>Sorting order. The returned certificates are listed by parameter <b>sort_key</b>. The options are as follows:</p> <ul style="list-style-type: none"><li>• <b>ASC</b>: ascending order</li><li>• <b>DESC</b>: descending order</li></ul> <p>Default: <b>DESC</b> Minimum: <b>0</b> Maximum: <b>32</b></p>
sort_key	No	String	<p>Sorting criteria. The options are as follows:</p> <ul style="list-style-type: none"><li>• <b>certExpiredTime</b>: Certificate expiration time.</li><li>• <b>certStatus</b>: certificate status</li><li>• <b>certUpdateTime</b>: Certificate update time.</li></ul> <p>Default: <b>certUpdateTime</b> Minimum: <b>0</b> Maximum: <b>64</b></p>

Parameter	Mandatory	Type	Description
status	No	String	<p>Certificate status. The options are as follows:</p> <ul style="list-style-type: none"><li>-<b>ALL</b>: All certificate statuses.</li><li>• <b>PAID</b>: The certificate has been paid and needs to be applied for from the CA.</li><li>• <b>ISSUED</b>: The certificate has been issued.</li><li>• <b>CHECKING</b>: The certificate application is being reviewed.</li><li>• <b>CANCELCHECKING</b>: The certificate application cancellation is being reviewed.</li><li>• <b>UNPASSED</b>: The certificate application fails.</li><li>• <b>EXPIRED</b>: The certificate has expired.</li><li>• <b>REVOKEING</b>: The certificate revocation application is being reviewed.</li><li>• <b>REVOKEING</b>: The certificate has been revoked.</li><li>• <b>UPLOAD</b>: The certificate is being managed.</li><li>• <b>CHECKING_ORG</b>: The organization verification is to be completed.</li><li>• <b>ISSUING</b>: The certificate is to be issued.</li><li>• <b>SUPPLEMENTCHECKING</b>: Additional domain names to be added for a multi-domain certificate are being reviewed.</li></ul> <p>Default: <b>ALL</b> Minimum: <b>0</b> Maximum: <b>64</b></p>
deploy_support	No	Boolean	Whether to filter only certificates that can be deployed. Default: <b>false</b>

Parameter	Mandatory	Type	Description
owned_by_self	No	Boolean	<p>Whether the resource belongs to the current tenant. The options are as follows:</p> <ul style="list-style-type: none"> <li>• true: Only resources that belong to the current tenant are queried, excluding shared resources.</li> <li>• false: Query the current tenant and the resources shared with the tenant.</li> </ul> <p>Default: <b>true</b> Minimum: <b>0</b> Maximum: <b>64</b></p>
expired_days_since	No	Integer	<p>The certificate is within the validity period and expires in a maximum of xx days.</p> <p>Minimum: <b>0</b> Maximum: <b>1095</b> Default: <b>0</b></p>

## Request Parameters

**Table 4-107** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	<p>User token. It can be obtained by calling the IAM API. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: <b>32</b> Maximum: <b>2097152</b></p>

## Response Parameters

**Status code: 200**

**Table 4-108** Response body parameters

Parameter	Type	Description
certificates	Array of <a href="#">CertificateDetail</a> objects	For details, see data structure description of the CertificateDetail field.  Array Length: <b>0 - 1000</b>
total_count	Integer	Number of certificates.  Minimum: <b>0</b>  Maximum: <b>10000</b>

**Table 4-109** CertificateDetail

Parameter	Type	Description
id	String	Certificate ID.  Minimum: <b>16</b>  Maximum: <b>16</b>
name	String	Certificate name.  Maximum: <b>63</b>  Minimum: <b>3</b>
domain	String	Domain name bound to a certificate.  Minimum: <b>1</b>  Maximum: <b>255</b>
sans	String	Additional domain name bound to a multi-domain certificate.  Minimum: <b>1</b>  Maximum: <b>4096</b>
signature_algorithm	String	Signature algorithm.  Minimum: <b>0</b>  Maximum: <b>64</b>
deploy_support	Boolean	Whether deployment is supported.
type	String	Certificate type. The options are: <b>DV_SSL_CERT, DV_SSL_CERT_BASIC, EV_SSL_CERT, EV_SSL_CERT_PRO, OV_SSL_CERT, or OV_SSL_CERT_PRO</b>  Minimum: <b>1</b>  Maximum: <b>128</b>

Parameter	Type	Description
brand	String	Certificate authority. The value can be GLOBALSIGN, SYMANTEC, GEOTRUST or CFCA. Minimum: <b>1</b> Maximum: <b>255</b>
expire_time	String	Certificate expiration time. Minimum: <b>1</b> Maximum: <b>32</b>
domain_type	String	Zone type. The options are: <ul style="list-style-type: none"><li>• <b>SINGLE_DOMAIN</b>: Single domain names</li><li>• <b>WILDCARD</b>: Wildcard domain names</li><li>• <b>MULTI_DOMAIN</b>: Multiple domain names</li></ul> Minimum: <b>1</b> Maximum: <b>128</b>
validity_period	Integer	Certificate validity period, in months. [CCM provides a solution for purchasing certificates with a multi-year validity period. This multi-year certificate takes effect by adding multiple SSL certificates with a validity period of one year. For example, a certificate with three years' validity period contains three SSL certificates with one-year validity period and the same specifications. The system automatically applies for a second certificate based on the information about the first certificate 30 days before the first certificate expires.] (tag:hws) Minimum: <b>12</b> Maximum: <b>12</b>

Parameter	Type	Description
status	String	<p>Certificate status. The options are as follows:</p> <ul style="list-style-type: none"><li>• <b>PAID</b>: The certificate has been paid and needs to be applied for from the CA.</li><li>• <b>ISSUED</b>: The certificate has been issued.</li><li>• <b>CHECKING</b>: The certificate application is being reviewed.</li><li>• <b>CANCELCHECKING</b>: The certificate application cancellation is being reviewed.</li><li>• <b>UNPASSED</b>: The certificate application fails.</li><li>• <b>EXPIRED</b>: The certificate has expired.</li><li>• <b>REVOKING</b>: The certificate revocation application is being reviewed.</li><li>• <b>CANCLEREVOKING</b>: The cancellation on certificate revocation is being reviewed.</li><li>• <b>REVOKE</b>: The certificate has been revoked.</li><li>• <b>UPLOAD</b>: The certificate is being managed.</li><li>• <b>SUPPLEMENTCHECKING</b>: Additional domain names to be added for a multi-domain certificate are being reviewed.</li><li>• <b>CANCELSUPPLEMENTING</b>: The cancellation on additional domain names to be added is being reviewed.</li></ul> <p>Minimum: <b>0</b> Maximum: <b>64</b></p>
domain_count	Integer	<p>Number of domain names can be bound to a certificate.</p> <p>Minimum: <b>1</b> Maximum: <b>100</b></p>

Parameter	Type	Description
wildcard_count	Integer	Number of wildcard domain names can be bound to a certificate. Minimum: <b>0</b> Maximum: <b>100</b>
description	String	Certificate description Minimum: <b>0</b> Maximum: <b>255</b>
domain_id	String	Account ID. Minimum: <b>0</b> Maximum: <b>100</b>

**Status code: 401**

**Table 4-110** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-111** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>

Parameter	Type	Description
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500****Table 4-112** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>

### 4.1.5.2 Importing a Certificate

#### Function

Import a certificate to CCM.

#### URI

POST /v3/scm/certificates/import

## Request Parameters

**Table 4-113** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: <b>32</b> Maximum: <b>2097152</b>

**Table 4-114** Request body parameters

Parameter	Mandatory	Type	Description
name	Yes	String	Certificate name. Enter a string of 3 to 63 characters. Only letters, numbers, underscores (_), hyphens (-), and periods (.) are allowed. Minimum: <b>3</b> Maximum: <b>63</b>
certificate	Yes	String	Certificate content, which can be an intermediate certificate or a root certificate. If the certificate_chain field is transferred to the certificate chain, this field is set to the certificate. Use the escape character \n or \r\n to replace carriage return and line feed characters. Minimum: <b>0</b> Maximum: <b>4096</b>
certificate_chain	No	String	Certificate chain, which is optional and can be transferred through the certificate field. Use the escape character \n or \r\n to replace carriage return and line feed characters. Minimum: <b>0</b> Maximum: <b>8192</b>

Parameter	Mandatory	Type	Description
private_key	Yes	String	Private key of a certificate. The private key protected by password cannot be uploaded. The carriage return character must be replaced with the escape character \n or \r\n. Minimum: <b>0</b> Maximum: <b>4096</b>
duplicate_check	No	Boolean	Whether the same certificate can be uploaded. <ul style="list-style-type: none"><li>• true: The same certificate can be uploaded.</li><li>• false: disagree</li></ul>

### 4.1.5.3 Obtaining Details of a Certificate

#### Function

This API is used to query details about a certificate.

#### URI

GET /v3/scm/certificates/{certificate\_id}

**Table 4-119** Path Parameters

Parameter	Mandatory	Type	Description
certificate_id	Yes	String	Certificate ID. Minimum: <b>16</b> Maximum: <b>16</b>

## Request Parameters

**Table 4-120** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: <b>32</b> Maximum: <b>2097152</b>

## Response Parameters

Status code: 200

**Table 4-121** Response body parameters

Parameter	Type	Description
id	String	Certificate ID. Minimum: <b>16</b> Maximum: <b>16</b>

Parameter	Type	Description
status	String	<p>Certificate status. The options are:</p> <ul style="list-style-type: none"><li>• <b>PAID</b>: The certificate has been paid and needs to be applied for from the CA.</li><li>• <b>ISSUED</b>: The certificate has been issued.</li><li>• <b>CHECKING</b>: The certificate application is being reviewed.</li><li>• <b>CANCELCHECKING</b>: The certificate application cancellation is being reviewed.</li><li>• <b>UNPASSED</b>: The certificate application fails.</li><li>• <b>EXPIRED</b>: The certificate has expired.</li><li>• <b>REVOKING</b>: The certificate revocation application is being reviewed.</li><li>• <b>REVOKE</b>: The certificate has been revoked.</li><li>• <b>UPLOAD</b>: The certificate is being managed.</li><li>• <b>SUPPLEMENTCHECKING</b>: Additional domain names to be added for a multi-domain certificate are being reviewed.</li><li>• <b>CANCELSUPPLEMENTING</b>: The cancellation on additional domain names to be added is being reviewed.</li></ul> <p>Minimum: <b>0</b> Maximum: <b>32</b></p>
order_id	String	Order ID. Minimum: <b>0</b> Maximum: <b>63</b>
name	String	Certificate name. Minimum: <b>3</b> Maximum: <b>63</b>

Parameter	Type	Description
type	String	Certificate type. The options are: <b>DV_SSL_CERT</b> , <b>DV_SSL_CERT_BASIC</b> , <b>EV_SSL_CERT</b> , <b>EV_SSL_CERT_PRO</b> , <b>OV_SSL_CERT</b> , or <b>OV_SSL_CERT_PRO</b> Minimum: <b>0</b> Maximum: <b>32</b>
brand	String	Certificate authority. The options are: <b>GLOBALLYSIGN</b> , <b>SYMANTEC</b> , <b>GEOTRUST</b> , or <b>CFCA</b> Minimum: <b>0</b> Maximum: <b>32</b>
push_support	String	Whether a certificate can be pushed. Minimum: <b>0</b> Maximum: <b>32</b>
revoke_reason	String	Reason for certificate revocation. Minimum: <b>0</b> Maximum: <b>255</b>
signature_algorithm	String	Signature algorithm. Minimum: <b>0</b> Maximum: <b>64</b>
issue_time	String	Time when the certificate was issued. If no valid value is obtained, this parameter is left blank. Minimum: <b>0</b> Maximum: <b>32</b>
not_before	String	Time when the certificate takes effect. If no valid value is obtained, this parameter is left blank. Minimum: <b>0</b> Maximum: <b>32</b>
not_after	String	Time when the certificate becomes invalid. If no valid value is obtained, this parameter is left blank. Minimum: <b>0</b> Maximum: <b>32</b>

Parameter	Type	Description
validity_period	Integer	<p>Certificate validity period, in months. [CCM provides a solution for purchasing certificates with a multi-year validity period. This multi-year certificate takes effect by adding multiple SSL certificates with a validity period of one year. For example, a certificate with three years' validity period contains three SSL certificates with one-year validity period and the same specifications. The system automatically applies for a second certificate based on the information about the first certificate 30 days before the first certificate expires.] (tag:hws)</p> <p>Minimum: <b>12</b></p> <p>Maximum: <b>12</b></p>
validation_method	String	<p>Domain ownership verification method. The value can be DNS, FILE, or EMAIL.</p> <p>Minimum: <b>0</b></p> <p>Maximum: <b>32</b></p>
domain_type	String	<p>Domain name type. The options are as follows:</p> <ul style="list-style-type: none"> <li>• <b>SINGLE_DOMAIN</b>: Single domain names</li> <li>• <b>WILDCARD</b>: Wildcard domain names</li> <li>• <b>MULTI_DOMAIN</b>: Multiple domain names</li> </ul> <p>Minimum: <b>0</b></p> <p>Maximum: <b>32</b></p>
multi_domain_type	String	<p>Multi-domain name type. The options are as follows:</p> <ul style="list-style-type: none"> <li>• primary_single: primary single domain name</li> <li>• primary_wildcard: primary wildcard domain name</li> </ul> <p>Minimum: <b>0</b></p> <p>Maximum: <b>32</b></p>

Parameter	Type	Description
domain	String	Domain name bound to a certificate. Minimum: <b>0</b> Maximum: <b>255</b>
sans	String	Additional domain name associated with the certificate Minimum: <b>0</b> Maximum: <b>4096</b>
domain_count	Integer	Number of domain names can be bound to a certificate. Minimum: <b>1</b> Maximum: <b>100</b>
wildcard_count	Integer	Number of additional domain names can be bound to a certificate. Minimum: <b>0</b> Maximum: <b>99</b>
fingerprint	String	SHA-1 certificate fingerprint Minimum: <b>40</b> Maximum: <b>40</b>
shared	Boolean	Shared resource or not
application_info	<a href="#">application_info</a> object	Certificate application information.
description	String	Certificate description. Minimum: <b>0</b> Maximum: <b>255</b>
authentification	Array of <a href="#">Authentification</a> objects	Domain ownership verification information. For details, see data structure of the <b>Authentification</b> field. Array Length: <b>0 - 100</b>

**Table 4-122** application\_info

Parameter	Type	Description
country	String	Country or region. Minimum: <b>0</b> Maximum: <b>255</b>

Parameter	Type	Description
company_name	String	Company name. Minimum: <b>0</b> Maximum: <b>255</b>
company_province	String	State/Province Minimum: <b>0</b> Maximum: <b>255</b>
company_city	String	City where a company is located. Minimum: <b>0</b> Maximum: <b>255</b>
applicant_name	String	Applicant name. Minimum: <b>0</b> Maximum: <b>255</b>
applicant_phone	String	Phone number of an applicant. Minimum: <b>0</b> Maximum: <b>255</b>
applicant_email	String	Email of an applicant. Minimum: <b>0</b> Maximum: <b>255</b>
contact_name	String	Name of a technical contact. Minimum: <b>0</b> Maximum: <b>255</b>
contact_phone	String	Phone number of the technical contact. Minimum: <b>0</b> Maximum: <b>255</b>
contact_email	String	Email of a technical contact. Minimum: <b>0</b> Maximum: <b>255</b>

**Table 4-123** Authentification

Parameter	Type	Description
record_name	String	Name of a domain ownership verification value. Minimum: <b>0</b> Maximum: <b>255</b>

Parameter	Type	Description
record_type	String	Type of the domain name verification value. Minimum: <b>0</b> Maximum: <b>255</b>
record_value	String	Domain verification value. Minimum: <b>0</b> Maximum: <b>255</b>
domain	String	Domain name mapping to the verification value Minimum: <b>0</b> Maximum: <b>255</b>

**Status code: 401****Table 4-124** Response body parameters

Parameter	Type	Description
entire_certificate	String	Certificate and certificate chain. Minimum: <b>1</b> Maximum: <b>12288</b>
certificate	String	Certificate content, excluding the certificate chain. Minimum: <b>1</b> Maximum: <b>4096</b>
certificate_chain	String	Certificate chain Minimum: <b>1</b> Maximum: <b>8192</b>

Parameter	Type	Description
private_key	String	Private key of a certificate Minimum: <b>1</b> Maximum: <b>4096</b>

**Status code: 401****Table 4-135** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403****Table 4-136** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-137** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

None

## Example Responses

### Status code: 200

Normal return.

```
{
  "entire_certificate" : "-----BEGIN CERTIFICATE-----*****-----END CERTIFICATE-----BEGIN CERTIFICATE-----*****----END CERTIFICATE----",
  "certificate" : "-----BEGIN CERTIFICATE-----*****-----END CERTIFICATE-----",
  "certificate_chain" : "-----BEGIN CERTIFICATE-----*****-----END CERTIFICATE-----",
  "private_key" : "-----BEGIN RSA PRIVATE KEY-----*****-----END RSA PRIVATE KEY-----"
}
```

### Status code: 401

Authentication failed.

```
{
  "error_code" : "SCM.XXX",
  "error_msg" : "XXX"
}
```

### Status code: 403

Access denied.

```
{
  "error_code" : "SCM.XXX",
  "error_msg" : "XXX"
}
```

### Status code: 500

Failed to complete the request because of an internal server error.

```
{
  "error_code" : "SCM.XXX",
  "error_msg" : "XXX"
}
```

## Status Codes

Status Code	Description
200	Normal return.
401	Authentication failed.
403	Access denied.
404	Access page not found.
500	Failed to complete the request because of an internal server error.

## 4.1.6 Certificate Deployment Management

### 4.1.6.1 Pushing a Certificate

#### Function

This API is used to push an SSL certificate to another HUAWEI CLOUD service, such as Elastic Load Balance (ELB), Web Application Firewall (WAF), and Content Delivery Network (CDN).

#### URI

POST /v3/scm/certificates/{certificate\_id}/push

**Table 4-138** Path Parameters

Parameter	Mandatory	Type	Description
certificate_id	Yes	String	Certificate ID. Minimum: <b>16</b> Maximum: <b>16</b>

## Request Parameters

**Table 4-139** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: <b>32</b> Maximum: <b>2097152</b>

**Table 4-140** Request body parameters

Parameter	Mandatory	Type	Description
target_project	Yes	String	Region where the service you want to push a certificate to is deployed. Minimum: <b>1</b> Maximum: <b>255</b>
target_service	Yes	String	Service to which the certificate is pushed. Currently, certificates can only be pushed to CDN, WAF, and ELB. Minimum: <b>1</b> Maximum: <b>64</b>

## Response Parameters

**Status code: 204**

Normal return.

**Status code: 401****Table 4-141** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>

Parameter	Type	Description
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403****Table 4-142** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500****Table 4-143** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Example Requests**

```
{  
    "target_service": "waf",  
    "target_project": "cn-north-7"  
}
```

## Example Responses

### Status code: 401

Authentication failed.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 403

Access denied.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 500

Failed to complete the request because of an internal server error.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
204	Normal return.
401	Authentication failed.
403	Access denied.
404	Access page not found.
500	Failed to complete the request because of an internal server error.

## Error Codes

See [Error Codes](#).

### 4.1.6.2 Pushing Certificates in Batches

#### Function

This API is used to push an SSL certificate to another Huawei Cloud service in batches, such as Elastic Load Balance (ELB), Web Application Firewall (WAF), and Content Delivery Network (CDN).

## URI

POST /v3/scm/certificates/{certificate\_id}/batch-push

**Table 4-144** Path Parameters

Parameter	Mandatory	Type	Description
certificate_id	Yes	String	Certificate ID. Minimum: <b>16</b> Maximum: <b>16</b>

## Request Parameters

**Table 4-145** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: <b>32</b> Maximum: <b>2097152</b>

**Table 4-146** Request body parameters

Parameter	Mandatory	Type	Description
target_projects	Yes	Array of strings	Region where the service you want to push a certificate to is deployed, for example, CDN, ELB, or WAF. Minimum: <b>1</b> Maximum: <b>32</b> Array Length: <b>1 - 10</b>
target_service	Yes	String	Service to which the certificate is pushed. Currently, certificates can only be pushed to CDN, WAF, and ELB. Minimum: <b>1</b> Maximum: <b>64</b>

## Response Parameters

**Status code: 200**

**Table 4-147** Response body parameters

Parameter	Type	Description
results	Array of <b>results</b> objects	Deployment result Array Length: <b>1 - 10</b>

**Table 4-148** results

Parameter	Type	Description
project_name	String	Region name, for example, cn-north-7. Minimum: <b>0</b> Maximum: <b>63</b>
cert_id	String	Certificate ID. Minimum: <b>0</b> Maximum: <b>255</b>
message	String	Push result. Minimum: <b>0</b> Maximum: <b>255</b>

**Status code: 401**

**Table 4-149** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-150** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500****Table 4-151** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

```
{  
    "target_service" : "waf",  
    "target_projects" : [ "cn-north-7" ]  
}
```

## Example Responses

**Status code: 200**

Normal response.

```
{  
    "results" : [ {  
        "project_name" : "cn-north-7",  
        "cert_id" : "scs16751254852691",  
        "message" : "success"  
    } ]  
}
```

**Status code: 401**

Authentication failed.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

#### Status code: 403

Access denied.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

#### Status code: 500

Failed to complete the request because of an internal server error.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
200	Normal response.
401	Authentication failed.
403	Access denied.
404	Access page not found.
500	Failed to complete the request because of an internal server error.

## Error Codes

See [Error Codes](#).

### 4.1.6.3 Deploying Certificates

#### Function

This API is used to deploy an SSL certificate to another Huawei Cloud service, such as Elastic Load Balance (ELB), Web Application Firewall (WAF), and Content Delivery Network (CDN).

#### Constraints

- Upload a certificate and a test certificate with a validity period of three months. For other cloud services, the deployment fee is CNY30/domain.

## URI

POST /v3/scm/certificates/{certificate\_id}/deploy

**Table 4-152** Path Parameters

Parameter	Mandatory	Type	Description
certificate_id	Yes	String	Certificate ID. Minimum: <b>16</b> Maximum: <b>16</b>

## Request Parameters

**Table 4-153** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. It can be obtained by calling the IAM API. The value of <b>X-Subject-Token</b> in the response header is the user token. Minimum: <b>32</b> Maximum: <b>2097152</b>

**Table 4-154** Request body parameters

Parameter	Mandatory	Type	Description
project_name	No	String	Name of the project where the resource to be deployed is located. If the resource is deployed in the main project, the value is the region ID. Minimum: <b>1</b> Maximum: <b>255</b>
service_name	Yes	String	Service to which the certificate is pushed. Currently, certificates can only be pushed to CDN, WAF, and ELB. Minimum: <b>1</b> Maximum: <b>64</b>

Parameter	Mandatory	Type	Description
resources	Yes	Array of <a href="#">DeployedResource</a> objects	List of resources to be deployed. Array Length: <b>1 - 20</b>

**Table 4-155 DeployedResource**

Parameter	Mandatory	Type	Description
id	No	String	Resource ID. This parameter is mandatory when WAF or ELB is deployed. Minimum: <b>0</b> Maximum: <b>63</b>
type	No	String	Resource type. Currently, this parameter is required only when WAF resources are deployed. The value can be <b>cloud</b> for cloud mode or <b>premium</b> for dedicated mode. Minimum: <b>0</b> Maximum: <b>63</b>
domain_name	No	String	Domain name to be deployed. Currently, this parameter is required only when CDN is deployed, that is, the domain name to be accelerated. The domain name must match the certificate. Minimum: <b>0</b> Maximum: <b>63</b>
enterprise_project_id	No	String	ID of the enterprise project to which the resource to be deployed belongs. This parameter is mandatory only when WAF resources are deployed. Minimum: <b>0</b> Maximum: <b>63</b>

## Response Parameters

Status code: 200

**Table 4-156** Response body parameters

Parameter	Type	Description
failure_list	Array of <b>FaiureResource</b> objects	List of resources that fail to be deployed. Array Length: <b>1 - 20</b>

**Table 4-157** FaiureResource

Parameter	Type	Description
resource	String	Information about the resource that fails to be deployed. When WAF or ELB is deployed, this field is the resource ID. When CDN is deployed, this field is the acceleration domain name. Minimum: <b>0</b> Maximum: <b>63</b>
failure_info	String	Failure cause, which is generally the error code returned by the target service. Minimum: <b>0</b> Maximum: <b>255</b>

### Status code: 401

**Table 4-158** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

### Status code: 403

**Table 4-159** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500****Table 4-160** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

```
{  
    "service_name" : "ELB",  
    "project_name" : "cn-north-7",  
    "resources" : [ {  
        "id" : "982b8a6a6ebc43809d82a46ca99aaeb7"  
    } ]  
}
```

## Example Responses

**Status code: 200**

Normal response.

```
{  
    "failure_list" : [ {  
        "resource" : "982b8a6a6ebc43809d82a46ca99aaeb7",  
        "failure_info" : "ELB.8904:certificate 982b8a6a6ebc43809d82a46ca99aaeb7 does not exist"  
    } ]  
}
```

### Status code: 401

Authentication failed.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 500

Failed to complete the request because of an internal server error.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
200	Normal response.
401	Authentication failed.
403	Access denied.
404	Access page not found.
500	Failed to complete the request because of an internal server error.

## Error Codes

See [Error Codes](#).

### 4.1.6.4 Querying Deployed Resources

#### Function

Query the resources deployed for the issued and uploaded non-SM series cryptographic algorithm certificates.

#### URI

POST /v3/scm/deployed-resources

## Request Parameters

**Table 4-161** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	<p>User token.</p> <p>It can be obtained by calling the IAM API. The value of <b>X-Subject-Token</b> in the response header is the user token.</p> <p>Minimum: <b>32</b></p> <p>Maximum: <b>2097152</b></p>

**Table 4-162** Request body parameters

Parameter	Mandatory	Type	Description
certificate_ids	Yes	Array of strings	<p>Certificate ID list.</p> <p>Minimum: <b>16</b></p> <p>Maximum: <b>16</b></p> <p>Array Length: <b>1 - 50</b></p>
service_names	Yes	Array of strings	<p>Service name list.</p> <ul style="list-style-type: none"> <li>• WAF: Query WAF resources associated with a certificate.</li> <li>• CDN: Query the CDN resources associated with a certificate.</li> <li>• ELB: Query the resources associated with ELB (classic) of a certificate.</li> <li>• ALL: Query the resources of the preceding four services.</li> </ul> <p>Minimum: <b>0</b></p> <p>Maximum: <b>5</b></p> <p>Array Length: <b>1 - 50</b></p>

## Response Parameters

Status code: 200

**Table 4-163** Response body parameters

Parameter	Type	Description
results	Array of <b>ResultDetail</b> objects	Request result list. For details, see data structure of the ResultDetail field. Array Length: <b>1 - 50</b>

**Table 4-164** ResultDetail

Parameter	Type	Description
certificate_id	String	Certificate ID. Minimum: <b>16</b> Maximum: <b>16</b>
total_num	Integer	Number of resources deployed for the certificate in the current service. Minimum: <b>0</b> Maximum: <b>1000</b>
deployed_resources	Array of <b>DeployedResourceDetail</b> objects	List of resources deployed under the current certificate. For details, see data structure of the DeployedResourceDetail field. Array Length: <b>0 - 100</b>

**Table 4-165** DeployedResourceDetail

Parameter	Type	Description
service	String	Name of the resource service where the certificate has been deployed. <ul style="list-style-type: none"><li>• WAF: The certificate is associated with WAF resources.</li><li>• CDN: The certificate is associated with the resources of the content delivery network.</li><li>• ELB: The certificate is associated with ELB (classic) resources.</li></ul> Minimum: <b>0</b> Maximum: <b>5</b>
resource_num	Integer	Number of resources deployed for the certificate in the current service. Minimum: <b>0</b> Maximum: <b>1000</b>

Parameter	Type	Description
resource_location	String	Global service or region-level service. Minimum: <b>0</b> Maximum: <b>63</b>
region_resources	Array of <a href="#">RegionResourceDetail</a> objects	Region resource list. For details, see data structure description of the RegionResourceDetail field. Array Length: <b>0 - 100</b>

**Table 4-166** RegionResourceDetail

Parameter	Type	Description
region_id	String	Region ID. If the service is a global service, set <b>region_id</b> to <b>global</b> . Other services are named based on the IAM. Minimum: <b>0</b> Maximum: <b>63</b>
is_error	Boolean	Indicates whether an exception occurs in the response when the resource information of the current region is requested. <ul style="list-style-type: none"><li>● true: An exception occurs. The statistics of the current region are inaccurate.</li><li>● false: No exception occurs. The statistics of the current region are correct.</li></ul>
resources	Array of <a href="#">ResourceDetail</a> objects	Resource set. The identifier of each resource is in the format of <b>resource ID + : + resource name</b> . For details, see the data structure description of the ResourceDetail field. Array Length: <b>0 - 100</b>

**Table 4-167** ResourceDetail

Parameter	Type	Description
resource_id	String	Resource ID. Minimum: <b>0</b> Maximum: <b>63</b>

Parameter	Type	Description
resource_name	String	Resource name. Options: Minimum: <b>0</b> Maximum: <b>63</b>

**Status code: 401****Table 4-168** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403****Table 4-169** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request. Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request. Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-170** Response body parameters

Parameter	Type	Description
error_code	String	Error code returned for an error request.  Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error information returned for an error request.  Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

```
{
  "certificate_ids" : [ "scs1665472591541" ],
  "service_names" : [ "WAF" ]
}
```

## Example Responses

### Status code: 200

Normal response.

```
{
  "results" : [ {
    "certificate_id" : "scs1665472591541",
    "total_num" : 1,

}
```

### Status code: 403

Access denied.

```
{
  "error_code" : "SCM.XXX",
```

```
    "error_msg" : "XXX"  
}
```

#### Status code: 500

Failed to complete the request because of an internal server error.

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

### Status Codes

Status Code	Description
200	Normal response.
401	Authentication failed.
403	Access denied.
404	Access page not found.
500	Failed to complete the request because of an internal server error.

### Error Codes

See [Error Codes](#).

## 4.2 Managing Private Certificates

### 4.2.1 Private CA Management

#### 4.2.1.1 Querying the CA List

##### Function

This API is used to query the CA list.

##### URI

GET /v1/private-certificateAuthorities

**Table 4-171** Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	The number of returned records. The default value is <b>10</b> . Minimum: <b>0</b> Maximum: <b>1000</b>
name	No	String	The CA certificate name ( <b>CN</b> ) filter. This parameter is used to obtain the set of CA certificates whose names contain a specific value. Minimum: <b>1</b> Maximum: <b>64</b>
offset	No	Integer	Index position. The query starts from the next data record indexed by this parameter. The default value is <b>0</b> . Minimum: <b>0</b>
status	No	String	The CA certificate status. You can search CA certificates by status. <ul style="list-style-type: none"><li>• <b>PENDING</b>: The CA certificate is to be activated. A CA certificate in this status cannot issue certificates.</li><li>• <b>ACTIVED</b>: The CA certificate is activated. A CA certificate in this status can issue certificates.</li><li>• <b>DISABLED</b>: The CA certificate is disabled. A CA certificate in this status cannot issue certificates.</li><li>• <b>DELETED</b>: The CA certificate is to be deleted as scheduled. A CA certificate in this status cannot issue certificates.</li><li>• <b>EXPIRED</b>: The CA certificate has expired. A CA certificate in this status cannot issue certificates.</li></ul>

Parameter	Mandatory	Type	Description
type	No	String	CA certificate types: <ul style="list-style-type: none"><li>• <b>ROOT</b>: a root CA certificate</li><li>• <b>SUBORDINATE</b>: a subordinate CA certificate</li></ul>
sort_key	No	String	Sorting attribute. The following attributes are available now: <ul style="list-style-type: none"><li>• <b>create_time</b>: Time the certificate was created (default)</li><li>• <b>common_name</b>: The certificate name</li><li>• <b>ca_type</b>: The CA certificate type</li><li>• <b>not_after</b>: The certificate expiration time</li></ul>
sort_dir	No	String	Sorting direction. The options are as follows: <ul style="list-style-type: none"><li>• <b>DESC</b>: descending order (default)</li><li>• <b>ASC</b>: ascending order</li></ul>

## Request Parameters

**Table 4-172** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

## Response Parameters

**Status code: 200**

**Table 4-173** Response body parameters

Parameter	Type	Description
total	Integer	Total number of CA certificates

Parameter	Type	Description
certificateAuthorities	Array of <a href="#">CertificateAuthorities</a> objects	The CA list. For details, see data structure for the <b>CertificateAuthorities</b> field.

**Table 4-174** CertificateAuthorities

Parameter	Type	Description
ca_id	String	ID of the CA certificate  Minimum: <b>36</b> Maximum: <b>36</b>
type	String	The CA type can be: <ul style="list-style-type: none"><li>• <b>ROOT</b>: a root CA</li><li>• <b>SUBORDINATE</b>: a subordinate CA</li></ul>
status	String	CA certificate status: <ul style="list-style-type: none"><li>• <b>PENDING</b>: The CA certificate is to be activated. A CA certificate in this status cannot issue certificates.</li><li>• <b>ACTIVED</b>: The CA certificate is activated. A CA certificate in this status can issue certificates.</li><li>• <b>DISABLED</b>: The CA certificate is disabled. A CA certificate in this status cannot issue certificates.</li><li>• <b>DELETED</b>: The CA certificate is to be deleted as scheduled. A CA certificate in this status cannot issue certificates.</li><li>• <b>EXPIRED</b>: The CA certificate has expired. A CA certificate in this status cannot issue certificates.</li></ul>
path_length	Integer	CA path length.  <b>NOTE</b> Note: The path length of the generated root CA certificate is not limited, but this field is set to <b>7</b> in the database. The path length of a subordinate CA is specified by you when you create the subordinate CA. The default value is <b>0</b> .  Minimum: <b>0</b> Maximum: <b>6</b>

Parameter	Type	Description
issuer_id	String	The ID of the CA certificate that issues the certificate. For a root CA, the value of this parameter is <b>null</b> . Minimum: <b>36</b> Maximum: <b>36</b>
issuer_name	String	The name of the parent CA certificate. For a root CA, the value of this parameter is <b>null</b> . Minimum: <b>1</b> Maximum: <b>64</b>
key_algorithm	String	Key algorithm
signature_algorithm	String	Signature hash algorithm
freeze_flag	Integer	Freezing tag: <ul style="list-style-type: none"><li>• <b>0</b>: The certificate is not frozen.</li><li>• <b>Other values</b>: The certificate is frozen (The type of value is reserved).</li></ul>
gen_mode	String	Certificate generation method. <ul style="list-style-type: none"><li>• <b>GENERATE</b>: The certificate is generated through the PCA system.</li><li>• <b>IMPORT</b>: The certificate is imported externally.</li><li>• <b>CSR</b>: The CSR is imported externally and issued by the internal CA. The private key is not managed in PCA.</li></ul>
serial_number	String	Serial number of the certificate Minimum: <b>1</b> Maximum: <b>64</b>
create_time	Long	Time the certificate was created. The value is a timestamp in milliseconds.
delete_time	Long	Time the certificate was deleted. The value is a timestamp in milliseconds.
not_before	Long	Time the certificate was created. The value is a timestamp in milliseconds.
not_after	Long	Time the certificate expires. The value is a timestamp in milliseconds.
distinguished_name	DistinguishedName object	Certificate name. For details, see data structure for the <b>DistinguishedName</b> field.

Parameter	Type	Description
crl_configuration	<a href="#">ListCrlConfiguration</a> object	Certificate CRL. For details, see data structure for the <b>ListCrlConfiguration</b> field.

**Table 4-175** DistinguishedName

Parameter	Type	Description
common_name	String	Common certificate name (CN). Minimum: <b>1</b> Maximum: <b>64</b>
country	String	Country code, which must comply with the regular expression "[A-Za-z]{2}". Minimum: <b>2</b> Maximum: <b>2</b>
state	String	State or city name. Minimum: <b>1</b> Maximum: <b>128</b>
locality	String	Country/Region. Minimum: <b>1</b> Maximum: <b>128</b>
organization	String	Organization name. Minimum: <b>1</b> Maximum: <b>64</b>
organizational_unit	String	Organization Unit (OU). Minimum: <b>1</b> Maximum: <b>64</b>

**Table 4-176** ListCrlConfiguration

Parameter	Type	Description
enabled	Boolean	Whether to enable the gray release for the CRL. <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>

Parameter	Type	Description
crl_name	String	Name of the CRL. <b>NOTE</b> If you do not specify this parameter, the system uses the ID of the parent CA that issues the current certificate by default.
obs_bucket_name	String	OBS bucket name.
valid_days	Integer	CRL update interval, in days. This parameter is mandatory when the CRL release function is enabled. Minimum: <b>7</b> Maximum: <b>30</b>
crl_dis_point	String	The address of the CRL file in the OBS bucket. <b>NOTE</b> This parameter is composed of <b>crl_name</b> , <b>obs_bucket_name</b> , and OBS address.

**Status code: 400****Table 4-177** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 401****Table 4-178** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>

Parameter	Type	Description
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-179** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404**

**Table 4-180** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-181** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>

Parameter	Type	Description
error_msg	String	Error message Minimum: 0 Maximum: 1024

## Example Requests

When you use this API to query the CA certificate list, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

GET <https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificateAuthorities>

## Example Responses

**Status code: 200**

Request succeeded.

### 4.2.1.2 Creating a CA

#### Function

This API is used to create a CA. If you wish to:

- Create a root CA, configure mandatory parameters based on the parameter description.
- Create a subordinate CA and activate its certificate, configure mandatory parameters based on the parameter description.
- Create a subordinate CA, but not want to activate its certificate, exclude one of the following parameters in the request body: **issuer\_id**, **signature\_algorithm**, and **validity**.

#### URI

POST /v1/private-certificateAuthorities

#### Request Parameters

**Table 4-182** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

**Table 4-183** Request body parameters

Parameter	Mandatory	Type	Description
type	Yes	String	Type of the CA you want to create: <ul style="list-style-type: none"><li>• <b>ROOT</b>: a root CA</li><li>• <b>SUBORDINATE</b>: a subordinate CA</li></ul>
distinguished_name	Yes	DistinguishedName object	Certificate name. For details, see data structure for the <b>DistinguishedName</b> field.
key_algorithm	Yes	String	Key algorithm. The options are as follows: <ul style="list-style-type: none"><li>• <b>RSA2048</b>: RSA algorithm with the key length of 2048 bits</li><li>• <b>RSA4096</b>: RSA algorithm with the key length of 4096 bits</li><li>• <b>EC256</b>: Elliptic Curve Digital Signature Algorithm (ECDSA) with the key length of 256 bits</li><li>• <b>EC384</b>: Elliptic Curve Digital Signature Algorithm (ECDSA) with the key length of 384 bits</li></ul>
validity	No	Validity object	Validity period of a certificate. The options are as follows: <ul style="list-style-type: none"><li>• If you want to create a root CA, this parameter is mandatory.</li><li>• If you want to create a subordinate CA and activate it, this parameter is mandatory.</li><li>• If you want to create a subordinate CA but not activate it immediately, this parameter is not required. You can specify this parameter when activating the subordinate CA.</li></ul> <p><b>NOTE</b> For details, see data structure description of the <b>Validity</b> field.</p>

Parameter	Mandatory	Type	Description
issuer_id	No	String	<p>ID of the parent CA. The options are as follows:</p> <ul style="list-style-type: none"><li>• If you want to create a root CA, this parameter is not required because a root CA is a self-signed certificate and does not have a parent CA.</li><li>• If you want to create a subordinate CA and activate it, this parameter is mandatory.</li><li>• If you want to create a subordinate CA but not activate it immediately, this parameter is not required. You can specify this parameter when activating the subordinate CA.</li></ul> <p>Minimum: <b>36</b> Maximum: <b>36</b></p>

Parameter	Mandatory	Type	Description
path_length	No	Integer	<p>Length of the CA certificate path. The options are as follows:</p> <ul style="list-style-type: none"><li>• If you want to create a root CA, this parameter is not required by default. This means CA path length is not limited and you can expand the CA hierarchies. To limit the CA hierarchies, you can specify this parameter when creating a subordinate CA.</li><li>• If you want to create a subordinate CA and activate it, specify this parameter based on your need. Default value: <b>0</b></li><li>• If you want to create a subordinate CA but not need to activate it, this parameter is not required. You can specify this parameter when you activate the subordinate CA.</li></ul> <p>Minimum: <b>0</b> Maximum: <b>6</b></p>

Parameter	Mandatory	Type	Description
signature_algorithm	No	String	<p>Signature hash algorithm.</p> <ul style="list-style-type: none"><li>● There are three scenarios:<ul style="list-style-type: none"><li>- If you want to create a root CA, this parameter is mandatory.</li><li>- If you want to create a subordinate CA and activate it, this parameter is mandatory.</li><li>- If you want to create a subordinate CA but not activate it immediately, this parameter is not required. You can specify this parameter when activating the subordinate CA.</li></ul></li><li>● The options are as follows:<ul style="list-style-type: none"><li>- <b>SHA256</b></li><li>- <b>SHA384</b></li><li>- <b>SHA512</b></li></ul></li></ul>

Parameter	Mandatory	Type	Description
key_usages	No	Array of strings	<p>Key usage. For details, see <a href="#">4.2.1.3</a> in RFC 5280.</p> <ul style="list-style-type: none"> <li>• <b>digitalSignature</b>: The key can be used as a digital signature.</li> <li>• <b>nonRepudiation</b>: The key can be used for non-repudiation.</li> <li>• <b>keyEncipherment</b>: The key can be used for key encryption.</li> <li>• <b>dataEncipherment</b>: The key can be used for data encryption.</li> <li>• <b>keyAgreement</b>: The key can be used for key negotiation.</li> <li>• <b>keyCertSign</b>: The key can issue a certificate.</li> <li>• <b>cRLSign</b>: The key can issue a certificate revocation list (CRL).</li> <li>• <b>encipherOnly</b>: The key is used only for encryption.</li> <li>• <b>decipherOnly</b>: The key is used only for decryption.</li> </ul> <p><b>NOTE</b> The default values are as follows:</p> <ul style="list-style-type: none"> <li>• Root CA certificates: <b>[digitalSignature, keyCertSign, cRLSign]</b>, which cannot be changed. The value you specified is ignored.</li> <li>• Subordinate CA certificates: <b>[digitalSignature, keyCertSign, cRLSign]</b>, which can be customized.</li> </ul>
crl_configuration	No	<a href="#">CrlConfiguration</a> object	Certificate CRL. For details, see data structure for the <b>CrlConfiguration</b> field.

**Table 4-184** DistinguishedName

Parameter	Mandatory	Type	Description
common_name	Yes	String	Common certificate name (CN). Minimum: <b>1</b> Maximum: <b>64</b>
country	Yes	String	Country code, which must comply with the regular expression "[A-Za-z]{2}". Minimum: <b>2</b> Maximum: <b>2</b>
state	Yes	String	State or city name. Minimum: <b>1</b> Maximum: <b>128</b>
locality	Yes	String	Country/Region. Minimum: <b>1</b> Maximum: <b>128</b>
organization	Yes	String	Organization name. Minimum: <b>1</b> Maximum: <b>64</b>
organizational_unit	Yes	String	Organization Unit (OU). Minimum: <b>1</b> Maximum: <b>64</b>

**Table 4-185** Validity

Parameter	Mandatory	Type	Description
type	Yes	String	Validity period type, which is mandatory. The options are as follows: <ul style="list-style-type: none"><li>• <b>YEAR:</b> Year (12 months)</li><li>• <b>MONTH:</b> Month (31 days)</li><li>• <b>DAY:</b> Day</li><li>• <b>HOUR:</b> Hour</li></ul>

Parameter	Mandatory	Type	Description
value	Yes	Integer	<p>The certificate validity period. The value of this parameter varies depending on the value of <b>type</b>:</p> <ul style="list-style-type: none"><li>• Root CA certificates: no longer than 30 years</li><li>• Subordinate CA or private certificates: no longer than 20 years</li></ul>
start_from	No	Integer	<p>Start time. The options are as follows:</p> <ul style="list-style-type: none"><li>• The value is a timestamp in milliseconds. For example, 1645146939688 indicates 2022-02-18 09:15:39.</li><li>• The value of <b>start_from</b> cannot be earlier than the result of the value of <b>current_time</b> minus 5 minutes.</li></ul>

**Table 4-186 CrlConfiguration**

Parameter	Mandatory	Type	Description
enabled	Yes	Boolean	<p>Whether to enable the gray release function of CRL.</p> <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>
crl_name	No	String	<p>Name of the certificate revocation list.</p> <p><b>NOTE</b> If you do not specify this parameter, the system uses the ID of the parent CA that issues the current certificate by default.</p>

Parameter	Mandatory	Type	Description
obs_bucket_name	No	String	OBS bucket name. <b>NOTE</b> To enable the CRL release function: <ul style="list-style-type: none"> <li>• This parameter is mandatory. You must have created an agency to authorize the PCA service to access OBS. For details, see <a href="#">Certificate Revocation &gt; Checking the Agency Permission</a> and <a href="#">Certificate Revocation &gt; Creating an Agency</a> in this document.</li> <li>• The specified OBS bucket must exist. Otherwise, an error will be reported.</li> </ul>
valid_days	No	Integer	CRL update interval, in days. This parameter is mandatory when the CRL release function is enabled. Minimum: 7 Maximum: 30

## Response Parameters

**Status code: 200**

**Table 4-187** Response body parameters

Parameter	Type	Description
ca_id	String	ID of the CA certificate being issued. Minimum: 36 Maximum: 36

**Status code: 400**

**Table 4-188** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: 3 Maximum: 36

Parameter	Type	Description
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 401****Table 4-189** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to create a CA certificate, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

```
POST https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificateAuthorities
```

```
{
  "type" : "ROOT",
  "key_algorithm" : "RSA4096",
  "signature_algorithm" : "SHA512",
  "distinguished_name" : {
    "common_name" : "demoRootRSA",
    "country" : "CN",
    "locality" : "chengdu",
    "organization" : "HW",
    "organization_unit" : "dew",
    "state" : "sichuan"
  },
  "validity" : {
    "type" : "YEAR",
    "value" : 3
  },
  "crl_configuration" : {
    "enabled" : false,
    "obs_bucket_name" : "demoBucket",
    "valid_days" : 8
  }
}
```

## Example Responses

**Status code: 200**

Request succeeded.

```
{  
    "ca_id" : "66504812-fedc-414a-9b7c-4c1836398524"  
}
```

### 4.2.1.4 Querying CA Details

#### Function

This API is used to query details about a CA.

#### URI

GET /v1/private-certificate-authorities/{ca\_id}

**Table 4-202** Path Parameters

Parameter	Mandatory	Type	Description
ca_id	Yes	String	ID of the CA certificate Minimum: 36 Maximum: 36

#### Request Parameters

**Table 4-203** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

## Response Parameters

Status code: 200

**Table 4-204** Response body parameters

Parameter	Type	Description
ca_id	String	ID of the CA certificate Minimum: <b>36</b> Maximum: <b>36</b>
type	String	The CA type can be: <ul style="list-style-type: none"><li>• <b>ROOT</b>: a root CA</li><li>• <b>SUBORDINATE</b>: a subordinate CA</li></ul>
status	String	CA certificate status: <ul style="list-style-type: none"><li>• <b>PENDING</b>: The CA certificate is to be activated. A CA certificate in this status cannot issue certificates.</li><li>• <b>ACTIVED</b>: The CA certificate is activated. A CA certificate in this status can issue certificates.</li><li>• <b>DISABLED</b>: The CA certificate is disabled. A CA certificate in this status cannot issue certificates.</li><li>• <b>DELETED</b>: The CA certificate is to be deleted as scheduled. A CA certificate in this status cannot issue certificates.</li><li>• <b>EXPIRED</b>: The CA certificate has expired. A CA certificate in this status cannot issue certificates.</li></ul>
path_length	Integer	CA path length. <b>NOTE</b> Note: The path length of the generated root CA certificate is not limited, but this field is set to <b>7</b> in the database. The path length of a subordinate CA is specified by you when you create the subordinate CA. The default value is <b>0</b> . Minimum: <b>0</b> Maximum: <b>6</b>
issuer_id	String	The ID of the CA certificate that issues the certificate. For a root CA, the value of this parameter is <b>null</b> . Minimum: <b>36</b> Maximum: <b>36</b>

Parameter	Type	Description
issuer_name	String	The name of the parent CA certificate. For a root CA, the value of this parameter is <b>null</b> . Minimum: <b>1</b> Maximum: <b>64</b>
key_algorithm	String	Key algorithm
signature_alg orithm	String	Signature hash algorithm
freeze_flag	Integer	Freezing tag: <ul style="list-style-type: none"><li>• <b>0</b>: The certificate is not frozen.</li><li>• <b>Other values</b>: The certificate is frozen (The type of value is reserved).</li></ul>
gen_mode	String	Certificate generation method. <ul style="list-style-type: none"><li>• <b>GENERATE</b>: The certificate is generated through the PCA system.</li><li>• <b>IMPORT</b>: The certificate is imported externally.</li><li>• <b>CSR</b>: The CSR is imported externally and issued by the internal CA. The private key is not managed in PCA.</li></ul>
serial_number	String	Serial number of the certificate Minimum: <b>1</b> Maximum: <b>64</b>
create_time	Long	Time the certificate was created. The value is a timestamp in milliseconds.
delete_time	Long	Time the certificate was deleted. The value is a timestamp in milliseconds.
not_before	Long	Time the certificate was created. The value is a timestamp in milliseconds.
not_after	Long	Time the certificate expires. The value is a timestamp in milliseconds.
distinguished_name	<a href="#">DistinguishedName object</a>	Certificate name. For details, see data structure for the <b>DistinguishedName</b> field.
crl_configuration	<a href="#">ListCrlConfiguration object</a>	Certificate CRL. For details, see data structure for the <b>ListCrlConfiguration</b> field.

**Table 4-205** DistinguishedName

Parameter	Type	Description
common_name	String	Common certificate name (CN). Minimum: <b>1</b> Maximum: <b>64</b>
country	String	Country code, which must comply with the regular expression "[A-Za-z]{2}". Minimum: <b>2</b> Maximum: <b>2</b>
state	String	State or city name. Minimum: <b>1</b> Maximum: <b>128</b>
locality	String	Country/Region. Minimum: <b>1</b> Maximum: <b>128</b>
organization	String	Organization name. Minimum: <b>1</b> Maximum: <b>64</b>
organizational_unit	String	Organization Unit (OU). Minimum: <b>1</b> Maximum: <b>64</b>

**Table 4-206** ListCrlConfiguration

Parameter	Type	Description
enabled	Boolean	Whether to enable the gray release for the CRL. <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>
crl_name	String	Name of the CRL. <b>NOTE</b> If you do not specify this parameter, the system uses the ID of the parent CA that issues the current certificate by default.
obs_bucket_name	String	OBS bucket name.

Parameter	Type	Description
valid_days	Integer	CRL update interval, in days. This parameter is mandatory when the CRL release function is enabled.  Minimum: <b>7</b> Maximum: <b>30</b>
crl_dis_point	String	The address of the CRL file in the OBS bucket.  <b>NOTE</b> This parameter is composed of <b>crl_name</b> , <b>obs_bucket_name</b> , and OBS address.

#### Status code: 400

**Table 4-207** Response body parameters

Parameter	Type	Description
error_code	String	Error code  Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message  Minimum: <b>0</b> Maximum: <b>1024</b>

#### Status code: 401

**Table 4-208** Response body parameters

Parameter	Type	Description
error_code	String	Error code  Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message  Minimum: <b>0</b> Maximum: <b>1024</b>

#### Status code: 403

**Table 4-209** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404****Table 4-210** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500****Table 4-211** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to query details about a CA, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

GET https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificateAuthorities/4c0e772e-a30c-4029-b929-b7acb04143f7

## Example Responses

### Status code: 200

Request succeeded.

```
{

    "error_msg": "XXX"  
}
```

### Status code: 401

Token required for the requested page.

```
{  
    "error_code": "PCA.XXX",  
    "error_msg": "XXX"  
}
```

### Status code: 403

Authentication failed.

```
{  
    "error_code": "PCA.XXX",  
    "error_msg": "XXX"  
}
```

### Status code: 404

No resources available or found.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 500

Internal service error.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
200	Request succeeded.
400	Invalid request parameters.
401	Token required for the requested page.
403	Authentication failed.
404	No resources available or found.
500	Internal service error.

## Error Codes

See [Error Codes](#).

### 4.2.1.5 Deleting a Private CA

#### Function

This API is used to delete a CA as scheduled. The scheduled time range can be 7 to 30 days.

Only the CAs in the **Pending activation** or **Disabled** status can be deleted. If a CA certificate is in the **Pending activation** status, the CA certificate will be deleted immediately, scheduled deletion is not supported.

#### URI

DELETE /v1/private-certificateAuthorities/{ca\_id}

**Table 4-212** Path Parameters

Parameter	Mandatory	Type	Description
ca_id	Yes	String	ID of the CA certificate you plan to delete. Minimum: <b>36</b> Maximum: <b>36</b>

**Table 4-213** Query Parameters

Parameter	Mandatory	Type	Description
pending_days	Yes	String	Delayed deletion time, in days Minimum: <b>7</b> Maximum: <b>30</b>

## Request Parameters

**Table 4-214** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

## Response Parameters

**Status code: 400**

**Table 4-215** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 401**

**Table 4-216** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-217** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404**

**Table 4-218** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-219** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to delete a CA certificate as scheduled, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

```
DELETE https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificateAuthorities/4c0e772ea30c-4029-b929-b7acb04143f7?pending_days=7
```

## Example Responses

### Status code: 400

Invalid request parameters.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 401

Token required for the requested page.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 403

Authentication failed.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 404

No resources available or found.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 500

Internal service error.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
204	Request succeeded, but no response body returned.
400	Invalid request parameters.
401	Token required for the requested page.
403	Authentication failed.
404	No resources available or found.
500	Internal service error.

## Error Codes

See [Error Codes](#).

### 4.2.1.6 Activating a CA

#### Function

This API is used to activate a CA.

You can activate a certificate only when it is in the **Pending activation** status.

#### URI

POST /v1/private-certificateAuthorities/{ca\_id}/activate

**Table 4-220** Path Parameters

Parameter	Mandatory	Type	Description
ca_id	Yes	String	ID of the subordinate CA you want to activate. Minimum: <b>36</b> Maximum: <b>36</b>

## Request Parameters

**Table 4-221** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

**Table 4-222** Request body parameters

Parameter	Mandatory	Type	Description
issuer_id	Yes	String	ID of the parent CA. Minimum: <b>1</b> Maximum: <b>64</b>
path_length	Yes	Integer	Path length. Minimum: <b>0</b> Maximum: <b>6</b>
signature_algorithm	Yes	String	Signature hash algorithm. The options are as follows: <ul style="list-style-type: none"><li>• <b>SHA256</b></li><li>• <b>SHA384</b></li><li>• <b>SHA512</b></li></ul>
validity	Yes	<a href="#">Validity object</a>	Certificate validity. For details, see data structure for the <b>Validity</b> field.

**Table 4-223** Validity

Parameter	Mandatory	Type	Description
type	Yes	String	Validity period type, which is mandatory. The options are as follows: <ul style="list-style-type: none"><li>• <b>YEAR</b>: Year (12 months)</li><li>• <b>MONTH</b>: Month (31 days)</li><li>• <b>DAY</b>: Day</li><li>• <b>HOUR</b>: Hour</li></ul>

Parameter	Mandatory	Type	Description
value	Yes	Integer	The certificate validity period. The value of this parameter varies depending on the value of <b>type</b> : <ul style="list-style-type: none"><li>• Root CA certificates: no longer than 30 years</li><li>• Subordinate CA or private certificates: no longer than 20 years</li></ul>
start_from	No	Integer	Start time. The options are as follows: <ul style="list-style-type: none"><li>• The value is a timestamp in milliseconds. For example, 1645146939688 indicates 2022-02-18 09:15:39.</li><li>• The value of <b>start_from</b> cannot be earlier than the result of the value of <b>current_time</b> minus 5 minutes.</li></ul>

## Response Parameters

Status code: 400

**Table 4-224** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

Status code: 401

**Table 4-225** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-226** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404**

**Table 4-227** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-228** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to activate a CA certificate, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

```
POST https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificateAuthorities/4c0e772ea30c-4029-b929-b7acb04143f7/activate

{
  "signature_algorithm": "SHA256",
  "validity": {
    "type": "YEAR",
    "value": 1
  },
  "path_length": 3,
  "issuer_id": "c718fe5f-d44a-467f-80f1-948348ff4132"
}
```

## Example Responses

### Status code: 400

Invalid request parameters.

```
{
  "error_code": "PCA.XXX",
  "error_msg": "XXX"
}
```

### Status code: 401

Token required for the requested page.

```
{
  "error_code": "PCA.XXX",
  "error_msg": "XXX"
}
```

### Status code: 403

Authentication failed.

```
{
  "error_code": "PCA.XXX",
  "error_msg": "XXX"
}
```

### Status code: 404

No resources available or found.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

#### Status code: 500

Internal service error.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
204	Request succeeded, but no response body returned.
400	Invalid request parameters.
401	Token required for the requested page.
403	Authentication failed.
404	No resources available or found.
500	Internal service error.

## Error Codes

See [Error Codes](#).

### 4.2.1.7 Exporting a CSR of a CA

#### Function

This API is used to export a Certificate Signing Request (CSR) of a CA.

A CSR can be exported only when the corresponding CA is in the **Pending activation** status.

#### URI

GET /v1/private-certificateAuthorities/{ca\_id}/csr

**Table 4-229** Path Parameters

Parameter	Mandatory	Type	Description
ca_id	Yes	String	ID of the subordinate CA that has not been activated. Minimum: <b>36</b> Maximum: <b>36</b>

## Request Parameters

**Table 4-230** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

## Response Parameters

**Status code: 200**

**Table 4-231** Response body parameters

Parameter	Type	Description
csr	String	Content of the CSR. The content varies depending on how you obtain the CSR: <ul style="list-style-type: none"> <li>If you use an API to obtain the CSR, the newline characters in it have been replaced with \r\n.</li> <li>If you export the CSR from the console, the CSR is in PEM format.</li> </ul> Minimum: <b>1</b> Maximum: <b>4096</b>

**Status code: 400**

**Table 4-232** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>

Parameter	Type	Description
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 401****Table 4-233** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403****Table 4-234** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404****Table 4-235** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>

Parameter	Type	Description
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500****Table 4-236** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to export a CSR of a CA certificate, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

```
GET https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificateAuthorities/4c0e772e-a30c-4029-b929-b7acb04143f7/csr
```

## Example Responses

**Status code: 200**

Request succeeded.

```
{  
    "csr" : "-----BEGIN CERTIFICATE REQUEST-----\r\nMIIBUDCB2AIBADBZMRAwDgYDVQQDDAdDU1lsMTIzMQswCQYDVQQGEwJbjERMA8G\r\nnA1UECAwlc2hhbmdoYWkxETAPBgNVBAcMCHNoYW5naGFpMRIwEAYDVQQKDALzaGFu\r\nnZxyoYWkwdjAQBgcqhkjOPQIBBqUrgQQAigNiAAQl9M7bK+vys5x9mnfG3783aPRh\r\nnPLPKVsRsgniC3vPZvlz9E7SasMfZLrXVK37QWhAEtgNG7NrQnwiOye0/8VZL\r\nnVX7ildM6CZY4SUYSa6TBUsXyGjOs514fxbuT6gADAKBggqhkJOPQQDAGNnADBk\r\nnAjBlQiPXU7TDDDwxrh\r\nJfZEYgmr61clQdE5GMozPDYime30zcuMnVrb9i3o/2BW+\r\nn0lECMG0QWbAYh0LoqnmAYqlgTKK8nKsxm0xFuTRYfxynWi8BpCvAGx803Qpa8EJV\r\nnTTjcw==\r\n-----END CERTIFICATE REQUEST-----"

{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 500

Internal service error.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
200	Request succeeded.
400	Invalid request parameters.
401	Token required for the requested page.
403	Authentication failed.
404	No resources available or found.
500	Internal service error.

## Error Codes

See [Error Codes](#).

### 4.2.1.8 Disabling a Private CA

#### Function

This API is used to disable a private CA.

You can disable a certificate only when it is in the **Activated** or **Expired** state.

#### URI

POST /v1/private-certificateAuthorities/{ca\_id}/disable

**Table 4-237** Path Parameters

Parameter	Mandatory	Type	Description
ca_id	Yes	String	ID of the CA certificate you want to disable. Minimum: <b>36</b> Maximum: <b>36</b>

#### Request Parameters

**Table 4-238** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

#### Response Parameters

**Status code: 400**

**Table 4-239** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 401**

**Table 4-240** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-241** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404**

**Table 4-242** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-243** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to disable a CA certificate, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

```
POST https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificateAuthorities/4c0e772ea30c-4029-b929-b7acb04143f7/disable
```

## Example Responses

### Status code: 400

Invalid request parameters.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 401

Token required for the requested page.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 403

Authentication failed.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 404

No resources available or found.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 500

Internal service error.

```
{  
    "error_code": "PCA.XXX",  
    "error_msg": "XXX"  
}
```

## Status Codes

Status Code	Description
204	Request succeeded, but no response body returned.
400	Invalid request parameters.
401	Token required for the requested page.
403	Authentication failed.
404	No resources available or found.
500	Internal service error.

## Error Codes

See [Error Codes](#).

### 4.2.1.9 Enabling a Private CA

#### Function

This API is used to enable a private CA.

Note: This operation is allowed only when the CA is in the **Disabled** status.

#### URI

POST /v1/private-certificateAuthorities/{ca\_id}/enable

**Table 4-244** Path Parameters

Parameter	Mandatory	Type	Description
ca_id	Yes	String	ID of the CA you want to enable. Minimum: <b>36</b> Maximum: <b>36</b>

## Request Parameters

**Table 4-245** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

## Response Parameters

**Status code: 400**

**Table 4-246** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 401**

**Table 4-247** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-248** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404****Table 4-249** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500****Table 4-250** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to enable a CA, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

```
POST https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificateAuthorities/4c0e772ea30c-4029-b929-b7acb04143f7/enable
```

## Example Responses

### Status code: 400

Invalid request parameters.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 401

Token required for the requested page.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 403

Authentication failed.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 404

No resources available or found.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 500

Internal service error.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
204	Request succeeded, but no response body returned.
400	Invalid request parameters.
401	Token required for the requested page.
403	Authentication failed.
404	No resources available or found.

Status Code	Description
500	Internal service error.

## Error Codes

See [Error Codes](#).

### 4.2.1.10 Exporting a CA Certificate

#### Function

This API is used to export the CA certificate.

Note: You can export a certificate only when it is in the **Activated** or **Expired** state.

#### URI

POST /v1/private-certificateAuthorities/{ca\_id}/export

**Table 4-251** Path Parameters

Parameter	Mandatory	Type	Description
ca_id	Yes	String	ID of the CA certificate you want to export. Minimum: <b>36</b> Maximum: <b>36</b>

#### Request Parameters

**Table 4-252** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

#### Response Parameters

**Status code: 200**

**Table 4-253** Response body parameters

Parameter	Type	Description
certificate	String	<p>Certificate content.</p> <p><b>NOTE</b></p> <ul style="list-style-type: none"> <li>• If you use an API to obtain the certificate, the newline characters in it have been replaced with <code>\r\n</code>.</li> <li>• If you export the certificate from the console, the certificate is in PEM format.</li> </ul> <p>Minimum: <b>1</b></p> <p>Maximum: <b>4096</b></p>
certificate_chain	String	<p>The content of the certificate chain. The sequence of the certificate chain (from top to bottom) is as follows: intermediate certificate &gt;... &gt; root certificate.</p> <p><b>NOTE</b></p> <ul style="list-style-type: none"> <li>• If you use an API to obtain the certificate chain, the newline characters in it have been replaced with <code>\r\n</code>.</li> <li>• If you export the certificate chain from the console, the certificate chain is in PEM format.</li> </ul> <p>Minimum: <b>1</b></p> <p>Maximum: <b>2097152</b></p>

**Status code: 400**

**Table 4-254** Response body parameters

Parameter	Type	Description
error_code	String	<p>Error code</p> <p>Minimum: <b>3</b></p> <p>Maximum: <b>36</b></p>
error_msg	String	<p>Error message</p> <p>Minimum: <b>0</b></p> <p>Maximum: <b>1024</b></p>

**Status code: 401**

**Table 4-255** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-256** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404**

**Table 4-257** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-258** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to export a CA certificate, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

```
POST https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificateAuthorities/4c0e772ea30c-4029-b929-b7acb04143f7/export
```

## Example Responses

### Status code: 200

Request succeeded.

### 4.2.1.11 Importing a CA Certificate

#### Function

This API is used to import a CA certificate. To use this API, the following conditions must be met:

- The certificate of the subordinate CA is in the **Pending activation** status.
- The certificate body you want to import must meet the following requirements:
  - When the certificate is issued, its certificate signature request must be exported from the PCA system.
  - Although the certificate chain is optional, importing the complete certificate chain is recommended so that you can export a complete certificate chain later.
  - The certificate body and certificate chain must be in PEM format.

#### URI

POST /v1/private-certificateAuthorities/{ca\_id}/import

**Table 4-259** Path Parameters

Parameter	Mandatory	Type	Description
ca_id	Yes	String	ID of the CA certificate you want to import. Minimum: <b>36</b> Maximum: <b>36</b>

## Request Parameters

**Table 4-260** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

**Table 4-261** Request body parameters

Parameter	Mandatory	Type	Description
certificate	Yes	String	Certificate content Minimum: <b>1</b> Maximum: <b>32768</b>
certificate_chain	No	String	Certificate chain content Minimum: <b>0</b> Maximum: <b>2097152</b>

## Response Parameters

**Status code: 400**

**Table 4-262** Response body parameters

See [Error Codes](#).

### 4.2.1.12 Restoring a CA

#### Function

This API is used to restore a CA. After a CA is restored, its status changes from **Pending deletion** to **Disabled**.

Note: Only a CA in the **Pending deletion** status can be restored.

#### URI

POST /v1/private-certificateAuthorities/{ca\_id}/restore

**Table 4-267** Path Parameters

Parameter	Mandatory	Type	Description
ca_id	Yes	String	ID of the CA certificate you want to restore. Minimum: <b>36</b> Maximum: <b>36</b>

## Request Parameters

**Table 4-268** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

## Response Parameters

  "error_code" : "PCA.XXX",  
  "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
204	Request succeeded, but no response body returned.
400	Invalid request parameters.
401	Token required for the requested page.
403	Authentication failed.
404	No resources available or found.
500	Internal service error.

## Error Codes

See [Error Codes](#).

### 4.2.1.13 Revoking a subordinate CA

#### Function

Reason for revocation.

If you do not want to provide the revocation reason, set the request body to `{}`. Otherwise, an error will be reported.

#### URI

POST /v1/private-certificateAuthorities/{ca\_id}/revoke

**Table 4-274** Path Parameters

Parameter	Mandatory	Type	Description
ca_id	Yes	String	ID of the sub-CA you want to revoke. Minimum: <b>36</b> Maximum: <b>36</b>

## Request Parameters

**Table 4-275** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

**Table 4-276** Request body parameters

Parameter	Mandatory	Type	Description
reason	No	String	<p>Reason for revocation. The options are as follows:</p> <ul style="list-style-type: none"><li>• <b>UNSPECIFIED</b> : Default value. No reason is specified for revocation.</li><li>• <b>KEY_COMPROMISE</b> : The certificate key material has been leaked.</li><li>• <b>CERTIFICATE_AUTHORITY_COMPROMISE</b> : Key materials of the CA have been leaked in the certificate chain.</li><li>• <b>AFFILIATION_CHANGED</b> : The subject or other information in the certificate has been changed.</li><li>• <b>SUPERSEDED</b> : The certificate has been replaced.</li><li>• <b>CESSATION_OF_OPERATION</b> : The entity in the certificate or certificate chain has ceased to operate.</li><li>• <b>CERTIFICATE_HOLD</b> : The certificate should not be considered valid currently and may take effect in the future.</li><li>• <b>PRIVILEGE_WITHDRAWN</b> : This certificate no longer has permissions on the properties it claims.</li><li>• <b>ATTRIBUTE_AUTHORITY_COMPROMISE</b> : The authority which determines appropriate attributes for a Certificate may have been compromised.</li></ul> <p><b>NOTE</b> If you do not want to provide the revocation reason, set the request body to <code>{}</code>. Otherwise, an error will be reported.</p>

Parameter	Mandatory	Type	Description
			<p>Enumeration values:</p> <ul style="list-style-type: none"><li>• UNSPECIFIED</li><li>• KEY_COMPROMISE</li><li>• CERTIFICATE_AUTHORITY_COMPROMISE</li><li>• AFFILIATION_CHANGED</li><li>• SUPERSEDED</li><li>• CESSATION_OF_OPERATION</li><li>• CERTIFICATE_HOLD</li><li>• PRIVILEGE_WITHDRAWN</li><li>• ATTRIBUTE_AUTHORITY_COMPROMISE</li></ul>

## Response Parameters

**Status code: 400**

**Table 4-277** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: 3 Maximum: 36
error_msg	String	Error message Minimum: 0 Maximum: 1024

**Status code: 401**

**Table 4-278** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: 3 Maximum: 36

Parameter	Type	Description
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-279** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404**

**Table 4-280** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-281** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>

Parameter	Type	Description
error_msg	String	Error message Minimum: 0 Maximum: 1024

## Example Requests

When you use this API to revoke a subordinate CA, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

```
POST https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificateAuthorities/6434f74f-2d13-4e6a-89eb-93ee313f1a43/revoke
```

```
{  
    "reason" : "KEY_COMPROMISE"  
}
```

## Example Responses

### Status code: 400

Invalid request parameters.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 401

Token required for the requested page.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 403

Authentication failed.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 404

No resources available or found.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 500

Internal service error.

```
{  
    "error_code": "PCA.XXX",  
    "error_msg": "XXX"  
}
```

## Status Codes

Status Code	Description
204	Request succeeded, but no response body returned.
400	Invalid request parameters.
401	Token required for the requested page.
403	Authentication failed.
404	No resources available or found.
500	Internal service error.

## Error Codes

See [Error Codes](#).

## 4.2.2 Private Certificate Management

### 4.2.2.1 Querying the List of Private Certificates

#### Function

This API is used to query the private certificate list.

#### URI

GET /v1/private-certificates

**Table 4-282** Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	The number of returned records. The default value is <b>10</b> . Minimum: <b>0</b> Maximum: <b>1000</b>

Parameter	Mandatory	Type	Description
name	No	String	The name of the private certificate. The set of certificates whose names contain the name field is returned.  Minimum: <b>1</b> Maximum: <b>64</b>
offset	No	Integer	Index position. The query starts from the next data record indexed by this parameter.  Minimum: <b>0</b>
status	No	String	The private certificate status. You can query private certificates by status. <ul style="list-style-type: none"><li>• <b>ISSUED</b>: The certificate is issued.</li><li>• <b>REVOKED</b>: The certificate is revoked.</li><li>• <b>EXPIRED</b>: The certificate expired.</li></ul>
sort_key	No	String	Sorting attribute. The following attributes are available now: <ul style="list-style-type: none"><li>• <b>create_time</b>: Time the certificate was created (default)</li><li>• <b>common_name</b>: The certificate name</li><li>• <b>issuer_name</b>: The name of the CA who issued the certificate.</li><li>• <b>not_after</b>: The certificate expiration time</li></ul>
sort_dir	No	String	Sorting direction. The options are as follows: <ul style="list-style-type: none"><li>• <b>DESC</b>: descending order (default)</li><li>• <b>ASC</b>: ascending order</li></ul>

## Request Parameters

**Table 4-283** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

## Response Parameters

**Status code: 200**

**Table 4-284** Response body parameters

Parameter	Type	Description
total	Integer	Total number of private certificates. Minimum: <b>0</b> Maximum: <b>1000000</b>
certificates	Array of <a href="#">Certificates</a> objects	For details, see data structure for the <b>Certificates</b> field.

**Table 4-285** Certificates

Parameter	Type	Description
certificate_id	String	ID of the private certificate Minimum: <b>36</b> Maximum: <b>36</b>
status	String	Certificate status: • <b>ISSUED</b> : The certificate is issued. • <b>EXPIRED</b> : The certificate expired. • <b>REVOKED</b> : The certificate is revoked.
issuer_id	String	ID of the parent CA. Minimum: <b>36</b> Maximum: <b>36</b>
issuer_name	String	The name of the parent CA certificate. Minimum: <b>1</b> Maximum: <b>64</b>
key_algorithm	String	Key algorithm

Parameter	Type	Description
signature_alg orithm	String	Signature algorithm
freeze_flag	Integer	Freezing tag: <ul style="list-style-type: none"> <li><b>0:</b> The certificate is not frozen.</li> <li><b>Other values:</b> The certificate is frozen (The type of value is reserved).</li> </ul>
gen_mode	String	Certificate generation method. <ul style="list-style-type: none"> <li><b>GENERATE:</b> The certificate is generated through the PCA system.</li> <li><b>IMPORT:</b> The certificate is imported externally.</li> <li><b>CSR:</b> The CSR is imported externally and issued by the internal CA. The private key is not managed in PCA.</li> </ul>
serial_number	String	Serial number. Minimum: <b>1</b> Maximum: <b>64</b>
create_time	Long	Time the certificate was created. The value is a timestamp in milliseconds.
delete_time	Long	Time the certificate was deleted. The value is a timestamp in milliseconds.
not_before	Long	Time the certificate was created. The value is a timestamp in milliseconds.
not_after	Long	Time the certificate expires. The value is a timestamp in milliseconds.
distinguished_name	DistinguishedName object	Certificate name. For details, see data structure for the <b>DistinguishedName</b> field.

**Table 4-286 DistinguishedName**

Parameter	Type	Description
common_name	String	Common certificate name (CN). Minimum: <b>1</b> Maximum: <b>64</b>

Parameter	Type	Description
country	String	Country code, which must comply with the regular expression "[A-Za-z]{2}". Minimum: <b>2</b> Maximum: <b>2</b>
state	String	State or city name. Minimum: <b>1</b> Maximum: <b>128</b>
locality	String	Country/Region. Minimum: <b>1</b> Maximum: <b>128</b>
organization	String	Organization name. Minimum: <b>1</b> Maximum: <b>64</b>
organizational_unit	String	Organization Unit (OU). Minimum: <b>1</b> Maximum: <b>64</b>

**Status code: 400**

**Table 4-287** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 401**

**Table 4-288** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-289** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404**

**Table 4-290** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-291** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to query the private certificate list, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

```
GET https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificates
```

## Example Responses

### Status code: 200

Request succeeded.

```

See [Error Codes](#).

### 4.2.2.2 Applying for a Certificate

#### Function

This API is used to apply for a certificate.

#### URI

POST /v1/private-certificates

#### Request Parameters

**Table 4-292** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

**Table 4-293** Request body parameters

Parameter	Mandatory	Type	Description
issuer_id	Yes	String	ID of the parent CA. Minimum: <b>36</b> Maximum: <b>36</b>

Parameter	Mandatory	Type	Description
key_algorithm	Yes	String	<p>Key algorithm. The options are as follows:</p> <ul style="list-style-type: none"><li>• <b>RSA2048</b>: RSA algorithm with the key length of 2048 bits</li><li>• <b>RSA4096</b>: RSA algorithm with the key length of 4096 bits</li><li>• <b>EC256</b>: Elliptic Curve Digital Signature Algorithm (ECDSA) with the key length of 256 bits</li><li>• <b>EC384</b>: Elliptic Curve Digital Signature Algorithm (ECDSA) with the key length of 384 bits</li></ul>
signature_algorithm	Yes	String	Signature hash algorithm. The options are as follows: <ul style="list-style-type: none"><li>• <b>SHA256</b></li><li>• <b>SHA384</b></li><li>• <b>SHA512</b></li></ul>
distinguished_name	Yes	<b>CertDistinguishedName</b> object	Certificate name. For details, see data structure for the <b>CertDistinguishedName</b> field.
validity	Yes	<b>Validity</b> object	Certificate validity. For details, see data structure for the <b>Validity</b> field.

Parameter	Mandatory	Type	Description
key_usages	No	Array of strings	<p>Key usage. For details, see <a href="#">4.2.1.3</a> in RFC 5280.</p> <ul style="list-style-type: none"><li>• <b>digitalSignature</b>: The key is used as a digital signature.</li><li>• <b>nonRepudiation</b>: The key can be used for non-repudiation.</li><li>• <b>keyEncipherment</b>: The key can be used for key encryption.</li><li>• <b>dataEncipherment</b>: The key can be used for data encryption.</li><li>• <b>keyAgreement</b>: The key can be used for key negotiation.</li><li>• <b>keyCertSign</b>: The key can issue a certificate.</li><li>• <b>cRLSign</b>: The key can issue a certificate revocation list (CRL).</li><li>• <b>encipherOnly</b>: The key is used only for encryption.</li><li>• <b>decipherOnly</b>: The key is used only for decryption.</li></ul>
subject_alternative_names	No	Array of <a href="#">SubjectAlternativeName</a> objects	<p>Alternative name for the subject. For details, see data structure for the <b>SubjectAlternativeName</b> field.</p> <ul style="list-style-type: none"><li>• Array size: [0, 20]</li></ul>
extended_key_usage	No	<a href="#">ExtendedKeyUsage</a> object	Extended Key Usage. For details, see data structure for the <b>ExtendedKeyUsage</b> field.
customized_extension	No	<a href="#">CustomizedExtension</a> object	Customized extension information. For details, see data structure for the <b>CustomizedExtension</b> field.

**Table 4-294 CertDistinguishedName**

Parameter	Mandatory	Type	Description
common_name	Yes	String	Common certificate name (CN). Minimum: <b>1</b> Maximum: <b>64</b>
country	No	String	Country code, which must comply with the regular expression "[A-Za-z]{2}".If not passed in, the value corresponding to the parent CA is inherited by default. Minimum: <b>2</b> Maximum: <b>2</b>
state	No	String	State or city name.If not passed in, the value corresponding to the parent CA is inherited by default. Minimum: <b>1</b> Maximum: <b>128</b>
locality	No	String	Country/Region.If not passed in, the value corresponding to the parent CA is inherited by default. Minimum: <b>1</b> Maximum: <b>128</b>
organization	No	String	Organization name.If not passed in, the value corresponding to the parent CA is inherited by default. Minimum: <b>1</b> Maximum: <b>64</b>
organizational_unit	No	String	Organization Unit (OU).If not passed in, the value corresponding to the parent CA is inherited by default. Minimum: <b>1</b> Maximum: <b>64</b>

**Table 4-295** Validity

Parameter	Mandatory	Type	Description
type	Yes	String	Validity period type, which is mandatory. The options are as follows: <ul style="list-style-type: none"><li>• <b>YEAR</b>: Year (12 months)</li><li>• <b>MONTH</b>: Month (31 days)</li><li>• <b>DAY</b>: Day</li><li>• <b>HOUR</b>: Hour</li></ul>
value	Yes	Integer	The certificate validity period. The value of this parameter varies depending on the value of <b>type</b> : <ul style="list-style-type: none"><li>• Root CA certificates: no longer than 30 years</li><li>• Subordinate CA or private certificates: no longer than 20 years</li></ul>
start_from	No	Integer	Start time. The options are as follows: <ul style="list-style-type: none"><li>• The value is a timestamp in milliseconds. For example, 1645146939688 indicates 2022-02-18 09:15:39.</li><li>• The value of <b>start_from</b> cannot be earlier than the result of the value of <b>current_time</b> minus 5 minutes.</li></ul>

**Table 4-296** SubjectAlternativeName

Parameter	Mandatory	Type	Description
type	Yes	String	Type of the alternative name. Currently, only <b>DNS</b> , <b>IP</b> , <b>DNS</b> , and <b>URI</b> are allowed. <ul style="list-style-type: none"><li>• <b>DNS</b></li><li>• <b>IP</b></li><li>• <b>EMAIL</b></li><li>• <b>URI</b></li></ul>

Parameter	Mandatory	Type	Description
value	Yes	String	<p>Value of the corresponding alternative name type.</p> <ul style="list-style-type: none"><li>• DNS type. Length range: 0 to 253 characters</li><li>• IP address type. Length range: 0 to 39 characters</li><li>• EMAIL type. Length range: 0 to 256 characters</li><li>• URI address type. Length range: 0 to 253 characters</li></ul>

**Table 4-297 ExtendedKeyUsage**

Parameter	Mandatory	Type	Description
server_auth	No	Boolean	<p>Server authentication. The OID is 1.3.6.1.5.5.7.3.1.</p> <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> <p><b>NOTE</b></p> <p>Enable this enhanced key usage for the server certificate. The default value is false.</p> <p><b>Default: false</b></p>
client_auth	No	Boolean	<p>Client authentication. The OID is 1.3.6.1.5.5.7.3.2</p> <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> <p><b>NOTE</b></p> <p>Enable this enhanced key usage for the client certificate. The default value is false.</p> <p><b>Default: false</b></p>
code_signing	No	Boolean	<p>Signing of downloadable executable code client authentication. The OID is 1.3.6.1.5.5.7.3.3.</p> <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> <p><b>NOTE</b></p> <p>The default value is false.</p> <p><b>Default: false</b></p>

Parameter	Mandatory	Type	Description
email_protection	No	Boolean	Email protection. The OID is 1.3.6.1.5.5.7.3.4. <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> <b>NOTE</b> The default value is false. <b>Default: false</b>
time_stamping	No	Boolean	Binding the hash of an object to a time. The OID is 1.3.6.1.5.5.7.3.8. <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> <b>NOTE</b> The default value is false. <b>Default: false</b>

**Table 4-298** CustomizedExtension

Parameter	Mandatory	Type	Description
object_identifier	No	String	Object identifier <b>NOTE</b> The value of this parameter must be a dot-decimal notation string that complies with the ASN1 specifications, for example, 1.3.6.1.4.1.2011.4.99. <b>Minimum: 1</b> <b>Maximum: 64</b>
value	No	String	Custom attribute content <b>Minimum: 1</b> <b>Maximum: 64</b>

## Response Parameters

**Status code: 200**

**Table 4-299** Response body parameters

Parameter	Type	Description
certificate_id	String	ID of the certificate being issued. Minimum: <b>36</b> Maximum: <b>36</b>

**Status code: 400**

**Table 4-300** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 401**

**Table 4-301** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-302** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404**

**Table 4-303** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-304** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to apply for a certificate, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

```
POST https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificates

{
  "key_algorithm" : "RSA2048",
  "distinguished_name" : {
    "country" : "CN",
    "state" : "Sichuan",
    "locality" : "Chengdu",
    "organization" : "Huawei",
    "organizational_unit" : "CloudBU",
    "common_name" : "TestCert"
  },
  "subject_alternative_names" : [ {
    "type" : "IP",
    "value" : "156.127.116.38"
  }],
  "signature_algorithm" : "SHA256",
  "validity" : {
    "type" : "YEAR",
    "value" : 3
  },
  "issuer_id" : "2cb2878b-6cd1-460d-bd25-afe655159bdc",
  "key_usages" : [ "digitalSignature", "nonRepudiation" ]
}
```

## Example Responses

### Status code: 200

Request succeeded.

```
{
  "certificate_id" : "ae9a326a-b61e-4446-854d-cda30ffe31f5"

### 4.2.2.3 Issuing a certificate via CSR

#### Function

This API is used to issue a certificate via CSR. The constraints are as follows:

- The default parameters are as follows:
  - Default CA parameters:
    - **keyUsage**: The options are **digitalSignature**, **keyCertSign**, and **cRLSign**. The parameters in the CSR are preferentially used.
    - **SignatureHashAlgorithm**: **SHA384**
    - **PathLength**: **0** (user-defined)
  - Private certificates
    - **keyUsage**: The options are **digitalSignature** and **keyAgreement**. The parameters in the CSR are preferentially used.
    - **SignatureHashAlgorithm**: **SHA384**
- If **type** is set to **INTERMEDIATE\_CA**, the created subordinate CA certificate has the following features:

- It does not use the CA quota. When you query the CA list, this certificate is not included.
  - Only the following two APIs can be used to obtain its information:
    - To obtain its details: GET /v1/private-certificateAuthorities/{ca\_id}
    - To export it: POST /v1/private-certificateAuthorities/{ca\_id}/export
  - The value of **certificate\_id** returned by this API is the value of **ca\_id** for the subordinate CA.
  - It cannot issue certificates as its key is on the user side.
- If **type** is set to **ENTITY\_CERT**, the created private certificate has the following features:
    - It uses the private certificate quota. When you query the private certificate list, this certificate is included.
    - The usage of this certificate is the same as that of other private certificates except that the exported certificate does not contain the key information (the key is on the client).

 **NOTE**

Note: Use **\r\n** or **\n** to replace the newline characters to convert the CSR into a string. For details, see the example request. Note: The organization information, public key algorithm, and public key content of a certificate are included in the CSR file and cannot be obtained through APIs.

## URI

POST /v1/private-certificates/csr

## Request Parameters

**Table 4-305** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

**Table 4-306** Request body parameters

Parameter	Mandatory	Type	Description
issuer_id	Yes	String	ID of the parent CA. Minimum: <b>36</b> Maximum: <b>36</b>

Parameter	Mandatory	Type	Description
csr	Yes	String	Certificate signature request. Use <code>\r\n</code> or <code>\n</code> to replace the newline characters in the CSR. The replacement is not required if this API is requested through the console. Maximum: <b>5120</b>
validity	Yes	<b>Validity</b> object	Certificate validity. For details, see data structure for the <b>Validity</b> field.
type	No	String	Certificate type. This parameter is used to distinguish subordinate CA certificates from private certificates. <ul style="list-style-type: none"> <li>• <b>ENTITY_CERT</b>: A private certificate is issued. It is the default value.</li> <li>• <b>INTERMEDIATE_CA</b>: A subordinate CA certificate is issued.</li> </ul>
path_length	No	Integer	Path length. This parameter is valid only when a subordinate CA is issued. Minimum: <b>0</b> Maximum: <b>6</b>
subject_alternative_names	No	Array of <b>SubjectAlternativeName</b> objects	The alternative name for the subject (This parameter is reserved and ignored at the backend). For details, see data structure for the <b>SubjectAlternativeName</b> field.

**Table 4-307** Validity

Parameter	Mandatory	Type	Description
type	Yes	String	Validity period type, which is mandatory. The options are as follows: <ul style="list-style-type: none"><li>• <b>YEAR</b>: Year (12 months)</li><li>• <b>MONTH</b>: Month (31 days)</li><li>• <b>DAY</b>: Day</li><li>• <b>HOUR</b>: Hour</li></ul>
value	Yes	Integer	The certificate validity period. The value of this parameter varies depending on the value of <b>type</b> : <ul style="list-style-type: none"><li>• Root CA certificates: no longer than 30 years</li><li>• Subordinate CA or private certificates: no longer than 20 years</li></ul>
start_from	No	Integer	Start time. The options are as follows: <ul style="list-style-type: none"><li>• The value is a timestamp in milliseconds. For example, 1645146939688 indicates 2022-02-18 09:15:39.</li><li>• The value of <b>start_from</b> cannot be earlier than the result of the value of <b>current_time</b> minus 5 minutes.</li></ul>

**Table 4-308** SubjectAlternativeName

Parameter	Mandatory	Type	Description
type	Yes	String	Type of the alternative name. Currently, only <b>DNS</b> , <b>IP</b> , <b>DNS</b> , and <b>URI</b> are allowed. <ul style="list-style-type: none"><li>• <b>DNS</b></li><li>• <b>IP</b></li><li>• <b>EMAIL</b></li><li>• <b>URI</b></li></ul>

Parameter	Mandatory	Type	Description
value	Yes	String	<p>Value of the corresponding alternative name type.</p> <ul style="list-style-type: none"> <li>• DNS type. Length range: 0 to 253 characters</li> <li>• IP address type. Length range: 0 to 39 characters</li> <li>• EMAIL type. Length range: 0 to 256 characters</li> <li>• URI address type. Length range: 0 to 253 characters</li> </ul>

## Response Parameters

**Status code: 200**

**Table 4-309** Response body parameters

Parameter	Type	Description
certificate_id	String	<p>ID of the certificate being issued. Minimum: <b>36</b> Maximum: <b>36</b></p>

**Status code: 400**

**Table 4-310** Response body parameters

Parameter	Type	Description
error_code	String	<p>Error code Minimum: <b>3</b> Maximum: <b>36</b></p>
error_msg	String	<p>Error message Minimum: <b>0</b> Maximum: <b>1024</b></p>

**Status code: 401**

**Table 4-311** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-312** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404**

**Table 4-313** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-314** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to issue a certificate via CSR, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

```
POST https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificates/csr

{
    "csr" : "-----BEGIN CERTIFICATE REQUEST-----\nMIICyTCCAbECAQAwXjELMAkGA1UEBhMCQ04xEDAOBgNVBAgTB3NpY2hhW4xEDAO\nBqNVAcTB2NoZW5nZHUXCzAJBgNVBAoTAKhXMQswCQYDVQQLEwJVDERMA8GA1UE\nAxMldGVzdC5jb20wggEiMA0GCSqGSIb3DQEBAQUAA4IBwAwggEKAoIBAQcz4q5z\\nxqK/L/\nFC9x2jESeUW5GBzS5rVxT0WLTCv9d1LtWBLSRlinATYTyP1pNo4/pBq\\\nHIM3iUDkc896CJerYINzOijTaV4GjCZvPrxSHUStolvIdfBsY+gnzbT1ol/y0r\\n3yb9dx7eeF5rPR+U8RTw+Ov/\nZNRb+0CY30hrXMDrWjp5dtLGTl5EFYxIKNOPCkR\\n\n+6BGyInC9PWSuqwsykFbgMRkcBaNAxa59dRhMF50pvx2Vs929vFrMi+ofDEL0Oqz\\\n1vyjaEA3pn3AGJGXZgrGNbSz12ixgGLes4cQD21GCIAWgnBQ7b1ru2V8ImUfyh0\\nyvTEyHJTufbQ\n+257AgMBAAGjJjkBqkqhkiG9w0BCQ4xFzAVMBMGA1UdEQQMMMAqC\\\nCHRLc3QuY29tMA0GCSqGSIb3DQEBCwUAA4IBAQBKfjZuYsz4s0wb1POIWn41eiAB\\\nnp53qb63QKWILN9z8dLktcdSl3IPfcfPZpxv++QPtn3LR9rJKBawusk6SPXbvOGgS\\n5J\n+6eM8kVW2O3gHFgoaMcPYVtiO7ekG6o25qx6+Rj84wbFdmpOic8AwrLEBwzYV\\\nnp1zaprWQu6PxBulkYPa3FLcntDdi7B67r0YTpxVvo1K7vHYFboDvPzXG57QIFIM\\\nnwGd1OegariMT3N8gBOzLZc+jqlpxgo4xoNqBHMo6DEmKLdWdzU4lpuGK9had99k\\nvQ5vft/\nQra3v1uq2lOm/G92b0uA9Y1t2bMHobtAnuXL0HmY9XcLdzpC3f8h8\\-----END CERTIFICATE REQUEST-----",

#### 4.2.2.4 Parsing a CSR

##### Function

This API is used to parse a CSR.

##### URI

POST /v1/private-certificates/csr/parse

##### Request Parameters

**Table 4-315** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

**Table 4-316** Request body parameters

Parameter	Mandatory	Type	Description
csr	Yes	String	Certificate signature request. Use <code>\r\n</code> or <code>\n</code> to replace the newline characters in the CSR. The replacement is not required if this API is requested through the console. Maximum: <b>5120</b>

##### Response Parameters

Status code: 200

**Table 4-317** Response body parameters

Parameter	Type	Description
key_algorithm	String	Key algorithm.
key_algorithm_length	String	Length of the key algorithm, in bits.
signature_algorithm	String	Signature algorithm with a specific signature and hash algorithm, for example, <b>SHA256withRSA</b> .

Parameter	Type	Description
public_key	String	Public key content. <b>NOTE</b> The newline characters have been replaced with \r\n. Minimum: <b>0</b> Maximum: <b>4096</b>
distinguished_name	DistinguishedName object	Certificate name. For details, see data structure for the <b>DistinguishedName</b> field.

**Table 4-318 DistinguishedName**

Parameter	Type	Description
common_name	String	Common certificate name (CN). Minimum: <b>1</b> Maximum: <b>64</b>
country	String	Country code, which must comply with the regular expression "[A-Za-z]{2}". Minimum: <b>2</b> Maximum: <b>2</b>
state	String	State or city name. Minimum: <b>1</b> Maximum: <b>128</b>
locality	String	Country/Region. Minimum: <b>1</b> Maximum: <b>128</b>
organization	String	Organization name. Minimum: <b>1</b> Maximum: <b>64</b>
organizational_unit	String	Organization Unit (OU). Minimum: <b>1</b> Maximum: <b>64</b>

**Status code: 400**

**Table 4-319** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 401**

**Table 4-320** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-321** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404**

**Table 4-322** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-323** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to parse a CSR, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

```
POST https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificates/csr/parse

}
```

#### Status code: 500

Internal service error.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
200	Request succeeded.
400	Invalid request parameters.
401	Token required for the requested page.
403	Authentication failed.
404	No resources available or found.
500	Internal service error.

## Error Codes

See [Error Codes](#).

### 4.2.2.6 Querying Certificate Details

#### Function

This API is used to query details about a certificate.

#### URI

GET /v1/private-certificates/{certificate\_id}

**Table 4-333** Path Parameters

Parameter	Mandatory	Type	Description
certificate_id	Yes	String	ID of the private certificate you want to query. Minimum: <b>36</b> Maximum: <b>36</b>

## Request Parameters

**Table 4-334** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

## Response Parameters

Status code: 200

**Table 4-335** Response body parameters

Parameter	Type	Description
certificate_id	String	ID of the private certificate Minimum: <b>36</b> Maximum: <b>36</b>
status	String	Certificate status: <ul style="list-style-type: none"><li>• <b>ISSUED</b>: The certificate is issued.</li><li>• <b>EXPIRED</b>: The certificate expired.</li><li>• <b>REVOKED</b>: The certificate is revoked.</li></ul>
issuer_id	String	ID of the parent CA. Minimum: <b>36</b> Maximum: <b>36</b>
issuer_name	String	The name of the parent CA certificate. Minimum: <b>1</b> Maximum: <b>64</b>
key_algorithm	String	Key algorithm
signature_algorithm	String	Signature algorithm

Parameter	Type	Description
freeze_flag	Integer	Freezing tag: <ul style="list-style-type: none"><li>• <b>0</b>: The certificate is not frozen.</li><li>• <b>Other values</b>: The certificate is frozen (The type of value is reserved).</li></ul>
gen_mode	String	Certificate generation method. <ul style="list-style-type: none"><li>• <b>GENERATE</b>: The certificate is generated through the PCA system.</li><li>• <b>IMPORT</b>: The certificate is imported externally.</li><li>• <b>CSR</b>: The CSR is imported externally and issued by the internal CA. The private key is not managed in PCA.</li></ul>
serial_number	String	Serial number. Minimum: <b>1</b> Maximum: <b>64</b>
create_time	Long	Time the certificate was created. The value is a timestamp in milliseconds.
delete_time	Long	Time the certificate was deleted. The value is a timestamp in milliseconds.
not_before	Long	Time the certificate was created. The value is a timestamp in milliseconds.
not_after	Long	Time the certificate expires. The value is a timestamp in milliseconds.
distinguished_name	<b>DistinguishedName</b> object	Certificate name. For details, see data structure for the <b>DistinguishedName</b> field.

**Table 4-336 DistinguishedName**

Parameter	Type	Description
common_name	String	Common certificate name (CN). Minimum: <b>1</b> Maximum: <b>64</b>
country	String	Country code, which must comply with the regular expression "[A-Za-z]{2}". Minimum: <b>2</b> Maximum: <b>2</b>

Parameter	Type	Description
state	String	State or city name. Minimum: <b>1</b> Maximum: <b>128</b>
locality	String	Country/Region. Minimum: <b>1</b> Maximum: <b>128</b>
organization	String	Organization name. Minimum: <b>1</b> Maximum: <b>64</b>
organizational_unit	String	Organization Unit (OU). Minimum: <b>1</b> Maximum: <b>64</b>

**Status code: 400**

**Table 4-337** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 401**

**Table 4-338** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-339** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404**

**Table 4-340** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-341** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to query details about a certificate, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

```
GET https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificates/  
6434f74f-2d13-4e6a-89eb-93ee313f1a43
```

## Example Responses

### Status code: 200

Request succeeded.

```
{  
    "signature_algorithm": "SHA256",  
    "issuer_id": "ef5d84d1-4f52-47d2-b1c8-a91a672487a0",

See [Error Codes](#).

### 4.2.2.7 Deleting a Certificate

#### Function

This API is used to delete a certificate.

#### URI

DELETE /v1/private-certificates/{certificate\_id}

**Table 4-342** Path Parameters

Parameter	Mandatory	Type	Description
certificate_id	Yes	String	ID of the private certificate you want to delete. Minimum: <b>36</b> Maximum: <b>36</b>

## Request Parameters

**Table 4-343** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

## Response Parameters

**Status code: 400**

**Table 4-344** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 401**

**Table 4-345** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-346** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404**

**Table 4-347** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-348** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to delete a certificate, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

```
DELETE https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificates/  
6434f74f-2d13-4e6a-89eb-93ee313f1a43
```

## Example Responses

### Status code: 400

Invalid request parameters.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 401

Token required for the requested page.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 403

Authentication failed.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 404

No resources available or found.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 500

Internal service error.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
204	Request succeeded, but no response body returned.
400	Invalid request parameters.
401	Token required for the requested page.
403	Authentication failed.
404	No resources available or found.

Status Code	Description
500	Internal service error.

## Error Codes

See [Error Codes](#).

### 4.2.2.8 Exporting a Certificate

#### Function

This API is used to export a certificate.

- There are two methods for different compression statuses:
  - If **is\_compressed** is set to **true**, a compressed file package is returned. The package name is in the format of *Certificate name\_Lowercase letters of the type field.zip*, for example, **test\_apache.zip**.
    - If **type** is set to **APACHE**, the compressed package contains three files: **server.key** (key file in PEM format), **chain.crt** (certificate chain in PEM format), and **server.crt** (certificate in PEM format).
    - If **type** is set to **IIS**, the compressed package contains two files: **keystorePass.txt** (keystore password) and **server.pfx** (PFX certificate). The certificate and certificate chain are contained in the same file).
    - If **type** is set to **NGINX**, the compressed package contains two files: **server.key** (key file in PEM format) and **server.crt** (content in PEM format. The certificate and certificate chain are contained in the same file).
    - If **type** is set to **TOMCAT**, the compressed package contains two files: **keystorePass.txt** (keystore password) and **server.jks** (JKX certificate). The certificate and certificate chain are contained in the same file).
    - If **type** is set to **OTHER**, the compressed package contains three files: **server.key** (key file in PEM format), **chain.pem** (certificate chain), and **server.pem** (certificate).
  - If **is\_compressed** is set to **false**, a certificate in JSON format is returned, including the following parameters:
    - If **type** is set to **APACHE**, **NGINX**, or **OTHER**, the following parameters are returned:
    - **certificate**: indicates the certificate content in PEM format.
    - **certificate\_chain**: indicates the certificate chain in PEM format.
    - **private\_key**: indicates the certificate private key in PEM format.

- If **type** is set to "IIS" or "TOMCAT", it is not defined currently.

 NOTE

Only certificates in the **Issued** status can be exported.

## URI

POST /v1/private-certificates/{certificate\_id}/export

**Table 4-349** Path Parameters

Parameter	Mandatory	Type	Description
certificate_id	Yes	String	ID of the private certificate you want to export. Minimum: <b>36</b> Maximum: <b>36</b>

## Request Parameters

**Table 4-350** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

**Table 4-351** Request body parameters

Parameter	Mandatory	Type	Description
is_compressed	Yes	String	Whether to compress. <ul style="list-style-type: none"><li>• true</li><li>• false</li></ul>

Parameter	Mandatory	Type	Description
type	Yes	String	<p>Type of the server on which the certificate is installed. The options are as follows:</p> <ul style="list-style-type: none"> <li>• <b>APACHE</b>: This parameter is recommended if you want to use the certificate for an Apache server.</li> <li>• <b>NGINX</b>: This parameter is recommended if you want to use the certificate for an Nginx server.</li> <li>• <b>IIS</b>: This parameter is recommended if you want to use the certificate for a Windows IIS server.</li> <li>• <b>TOMCAT</b>: This parameter is recommended if you want to use the certificate for a Tomcat server.</li> <li>• <b>OTHER</b>: This parameter is recommended if you want to download a certificate in PEM format.</li> </ul>

## Response Parameters

Status code: 200

**Table 4-352** Response body parameters

Parameter	Type	Description
private_key	String	Private key content
certificate	String	Certificate content

### 4.2.2.9 Revoking a Certificate

#### Function

This API is used to revoke a certificate.

Note: If you do not want to provide the revocation reason, set the request body to `{}`. Otherwise, an error will be reported.

#### URI

POST /v1/private-certificates/{certificate\_id}/revoke

**Table 4-358** Path Parameters

Parameter	Mandatory	Type	Description
certificate_id	Yes	String	ID of the private certificate you want to revoke. Minimum: <b>36</b> Maximum: <b>36</b>

#### Request Parameters

**Table 4-359** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

**Table 4-360** Request body parameters

Parameter	Mandatory	Type	Description
reason	No	String	<p>Reason for revocation. The options are as follows:</p> <ul style="list-style-type: none"><li>• <b>UNSPECIFIED</b> : Default value. No reason is specified for revocation.</li><li>• <b>KEY_COMPROMISE</b> : The certificate key material has been leaked.</li><li>• <b>CERTIFICATE_AUTHORITY_COMPROMISE</b> : Key materials of the CA have been leaked in the certificate chain.</li><li>• <b>AFFILIATION_CHANGED</b> : The subject or other information in the certificate has been changed.</li><li>• <b>SUPERSEDED</b> : The certificate has been replaced.</li><li>• <b>CESSATION_OF_OPERATION</b> : The entity in the certificate or certificate chain has ceased to operate.</li><li>• <b>CERTIFICATE_HOLD</b> : The certificate should not be considered valid currently and may take effect in the future.</li><li>• <b>PRIVILEGE_WITHDRAWN</b> : This certificate no longer has permissions on the properties it claims.</li><li>• <b>ATTRIBUTE_AUTHORITY_COMPROMISE</b> : The authority which determines appropriate attributes for a Certificate may have been compromised.</li></ul> <p><b>NOTE</b> If you do not want to provide the revocation reason, set the request body to <code>{}</code>. Otherwise, an error will be reported.</p>

Parameter	Mandatory	Type	Description
			<p>Enumeration values:</p> <ul style="list-style-type: none"><li>• UNSPECIFIED</li><li>• KEY_COMPROMISE</li><li>• CERTIFICATE_AUTHORITY_COMPROMISE</li><li>• AFFILIATION_CHANGED</li><li>• SUPERSEDED</li><li>• CESSATION_OF_OPERATION</li><li>• CERTIFICATE_HOLD</li><li>• PRIVILEGE_WITHDRAWN</li><li>• ATTRIBUTE_AUTHORITY_COMPROMISE</li></ul>

## Response Parameters

**Status code: 400**

**Table 4-361** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: 3 Maximum: 36
error_msg	String	Error message Minimum: 0 Maximum: 1024

**Status code: 401**

**Table 4-362** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: 3 Maximum: 36

Parameter	Type	Description
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-363** Response body parameters

500	Internal service error.

## Error Codes

See [Error Codes](#).

### 4.2.3 Certificate Revocation

#### 4.2.3.1 Checking the Agency Permission

##### Function

This API is used to check whether you have the agency permission.

Your token must have the **secu\_admin** role assigned.

##### URI

GET /v1/private-certificate-authorities/obs/agencies

##### Request Parameters

**Table 4-366** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

## Response Parameters

**Status code: 200**

**Table 4-367** Response body parameters

Parameter	Type	Description
agency_granted	String	OBS agency status <ul style="list-style-type: none"><li>• true</li><li>• false</li></ul>

**Status code: 400**

**Table 4-368** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>

    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 500

Internal service error.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
200	Request succeeded.
400	Invalid request parameters.

Status Code	Description
401	Token required for the requested page.
403	Authentication failed.
404	No resources available or found.
500	Internal service error.

## Error Codes

See [Error Codes](#).

### 4.2.3.2 Creating an Agency

#### Function

This API is used to create an OBS agency for PCA to access OBS buckets and update the CRL.

Your token must have the **secu\_admin** role assigned.

#### URI

POST /v1/private-certificateAuthorities/obs/agencies

#### Request Parameters

**Table 4-373** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

#### Response Parameters

**Status code: 200**

**Table 4-374** Response body parameters

Parameter	Type	Description
agency_id	String	Authorization ID returned by IAM when an OBS agency is created.

**Status code: 400**

**Table 4-375** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 401**

**Table 4-376** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-377** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404**

**Table 4-378** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-379** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to create an OBS agency (for accessing OBS buckets and updating the CRL) for PCA, a token is required in the **X-Auth-Token** field in the request header, and the token must have the permission to access the API and the **secu\_admin** permission.

POST <https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificateAuthorities/obs/agencies>

## Example Responses

**Status code: 200**

Request succeeded.

```
{  
    "agency_id" : "078ade0fc20010004f8fc0034fad529d"  
}
```

**Status code: 400**

Invalid request parameters.

```
{  
    "error_code" : "PCA.XXX",  
}
```

```
    "error_msg" : "XXX"  
}
```

### Status code: 401

Token required for the requested page.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 403

Authentication failed.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 404

No resources available or found.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

### Status code: 500

Internal service error.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
200	Request succeeded.
400	Invalid request parameters.
401	Token required for the requested page.
403	Authentication failed.
404	No resources available or found.
500	Internal service error.

## Error Codes

See [Error Codes](#).

### 4.2.3.3 Querying the List of OBS Buckets

#### Function

This API is used to query the list of OBS buckets.

This API can be used only when an agency is created. For details about how to create an agency, see **Certificate Revocation > Creating an Agency** in this document.

#### URI

GET /v1/private-certificateAuthorities/obs/buckets

#### Request Parameters

**Table 4-380** Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. For details, see <a href="#">Obtaining a User Token</a> .

#### Response Parameters

Status code: 200

**Table 4-381** Response body parameters

Parameter	Type	Description
total	Integer	Total number of the OBS buckets.
obs_buckets	Array of <a href="#">ObsBuckets</a> objects	For details, see data structure for the <b>ObsBuckets</b> field.

**Table 4-382** ObsBuckets

Parameter	Type	Description
bucket_name	String	Bucket name Minimum: 3 Maximum: 63
create_time	Long	Creation time. The value is a timestamp in milliseconds.

**Status code: 400**

**Table 4-383** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 401**

**Table 4-384** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 403**

**Table 4-385** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 404**

**Table 4-386** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

**Status code: 500**

**Table 4-387** Response body parameters

Parameter	Type	Description
error_code	String	Error code Minimum: <b>3</b> Maximum: <b>36</b>
error_msg	String	Error message Minimum: <b>0</b> Maximum: <b>1024</b>

## Example Requests

When you use this API to query the list of OBS buckets, a token is required in the **X-Auth-Token** field in the request header. The token must have the permission to access the API.

GET https://ccm.ap-southeast-3.myhuaweicloud.com/v1/private-certificateAuthorities/obs/buckets

## Example Responses

**Status code: 200**

Request succeeded.

```
{  
    "total": 2,  
    "obs_buckets": [  
        {"create_time": 1554867690718,  
         "bucket_name": "admin1"},  
        {"create_time": 1554949519646,  
         "bucket_name": "admin3"}  
    ]  
}
```

**Status code: 400**

Invalid request parameters.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

#### Status code: 401

Token required for the requested page.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

#### Status code: 403

Authentication failed.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

#### Status code: 404

No resources available or found.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

#### Status code: 500

Internal service error.

```
{  
    "error_code" : "PCA.XXX",  
    "error_msg" : "XXX"  
}
```

## Status Codes

Status Code	Description
200	Request succeeded.
400	Invalid request parameters.
401	Token required for the requested page.
403	Authentication failed.
404	No resources available or found.
500	Internal service error.

## Error Codes

See [Error Codes](#).

# 5 Examples

## 5.1 Example 1: Deleting an Expired SSL Certificate

### Scenario

This topic describes how to delete an expired SSL certificate using the SCM API.

#### NOTE

- This topic only describes how to delete an SSL certificate from Huawei Cloud. The certificate will still be valid and trusted by web browsers.
- After you submit a certificate deletion application, you cannot cancel it. Exercise caution when performing this operation.

### Involved APIs

- [Querying the certificate list](#): Query all SSL certificates under your current account.
- [Deleting a certificate](#): Delete a specific expired SSL certificate.

### Procedure

#### Step 1 Query the certificate list.

- API information  
URI format: GET /v3/scm/certificates  
For details, see [Querying the Certificate List](#).
- Example request  
GET: `https://{endpoint}/v3/scm/certificates`  
Obtain `{endpoint}` from [Regions and Endpoints](#).  
Body:  

```
{  
    "limit": "2",  
    "offset": "0"  
}
```

- Example response

```
{  
    "certificates": [ {  
        "id": "scs1554192131150",  
        "name": "test",  
        "domain": "www.zx.com",  
        "type": "OV_SSL_CERT",  
        "brand": "GEOTRUST",  
        "expire_time": "2021-05-27 16:46:25.0",  
        "domain_type": "MULTI_DOMAIN",  
        "validity_period": 12,  
        "status": "ISSUED",  
        "domain_count": 2,  
        "wildcard_count": 0,  
        "description": null  
    } ],  
    "total_count": 1  
}
```

### Step 2 Delete a certificate.

- API information

URI format: DELETE /v3/scm/certificates/{certificate\_id}

For details, see [Deleting a Certificate](#).

- Example request

DELETE: <https://{{endpoint}}/v3/scm/certificates/scs1554192131150>

Obtain {{endpoint}} from [Regions and Endpoints](#).

Body:

```
{  
    certificate_id:scs1554192131150  
}
```

- Example response

```
{}
```

or

```
{  
    "error_code": "SCM.XXX",  
    "error_msg": "XXX"  
}
```

----End

## 5.2 Example 2: Pushing Your External SSL Certificate to Other Services

### Scenario

This topic describes how to import your SSL certificates purchased on other platforms to SCM and push such certificates to your cloud services on Huawei Cloud, such as WAF and CDN, to keep your workloads secure.

### Involved APIs

- [Importing a certificate](#): Import an SSL certificate not purchased on SCM into SCM for centralized management.
- [Querying the certificate list](#): Query all certificates under your current account and obtain the ID of the certificate to be pushed.

- **Pushing a certificate:** Push an SSL certificate imported into SCM to other Huawei Cloud services.

## Procedure

### Step 1 Import the certificate.

- API information  
URI format: POST /v3/scm/certificates/import  
For details, see [Importing a Certificate](#)
- Example request  
POST: <https://{{endpoint}}/v3/scm/certificates/import>  
Obtain {{endpoint}} from [Regions and Endpoints](#).
- Example response

```
{  "certificate_id": "scs1554192131150"}
```

### Step 2 Query the certificate list.

- API information  
URI format: GET /v3/scm/certificates  
For details, see [Querying the Certificate List](#).
- Example request  
GET: <https://{{endpoint}}/v3/scm/certificates>  
Obtain {{endpoint}} from [Regions and Endpoints](#).  
Body:

```
{  "limit": "2",  "offset": "0"}
```

- Example response

```
{  "certificates": [ {    "id": "scs1554192131150",    "name": "test",    "domain": "www.zx.com",    "type": "OV_SSL_CERT",    "brand": "GEOTRUST",    "expire_time": "2021-05-27 16:46:25.0",    "domain_type": "MULTI_DOMAIN",    "validity_period": 12,    "status": "ISSUED",    "domain_count": 2,    "wildcard_count": 0,    "description": null  } ],  "total_count": 1}
```

### Step 3 Push a certificate.

- API information  
URI format: POST /v3/scm/certificates/{certificate\_id}/push  
For details, see [Pushing a Certificate](#)
- Example request

POST: <https://{{endpoint}}/v3/scm/certificates/{{scs1554192131150}}/push>

Obtain {{endpoint}} from [Regions and Endpoints](#).

- Example response

```
{  
}
```

or

```
{  
    "error_code": "SCM.XXX",  
    "error_msg": "XXX"  
}
```

----End

## 5.3 Example 3: Pushing Your SSL Certificate Purchased Through CCM to Other Services

### Scenario

This topic describes how to push a certificate purchased and issued in CCM to WAF and CDN on Huawei Cloud to keep your workloads secure.

### Involved APIs

- [Querying the certificate list](#): Query all certificates under your current account and obtain the ID of the certificate to be pushed.
- [Pushing a certificate](#): Push an SSL certificate you have purchased in CCM to other Huawei Cloud services.

### Procedure

#### Step 1 Query the certificate list.

- API information

URI format: GET /v3/scm/certificates

For details, see [Querying the Certificate List](#).

- Example request

GET: <https://{{endpoint}}/v3/scm/certificates>

Obtain {{endpoint}} from [Regions and Endpoints](#).

Body:

```
{  
    "limit": "2",  
    "offset": "0"  
}
```

- Example response

```
{  
    "certificates": [ {  
        "id": "scs1554192131150",  
        "name": "test",  
        "domain": "www.zx.com",  
        "type": "OV_SSL_CERT",  
        "brand": "GEOTRUST",  
        "expire_time": "2021-05-27 16:46:25.0",  
        "domain_type": "MULTI_DOMAIN",  
    } ]  
}
```

```
        "validity_period" : 12,
        "status" : "ISSUED",
        "domain_count" : 2,
        "wildcard_count" : 0,
        "description" : null
    } ],
    "total_count" : 1
}
```

**Step 2** Push an SSL certificate to other services.

- API information

URI format: POST /v3/scm/certificates/{certificate\_id}/push

For details, see [Pushing a Certificate](#)

- Example request

POST: <https://{endpoint}/v3/scm/certificates/scs1554192131150/push>

Obtain {endpoint} from [Regions and Endpoints](#).

- Example response

```
{  
}
```

or

```
{  
    "error_code" : "SCM.XXX",  
    "error_msg" : "XXX"  
}
```

----End

# 6

# Permissions and Supported Actions

## 6.1 Introduction to Permissions Policies and Supported Actions

This section describes fine-grained permissions management for your CCM. If your account does not need individual IAM users, then you may skip over this section.

By default, new IAM users do not have permissions assigned. You need to add a user to one or more groups, and attach permissions policies or roles to these groups. Users inherit permissions from the groups to which they are added and can perform specified operations on cloud services based on the permissions.

Permissions are classified into roles and policies based on the authorization granularity. Roles are a type of coarse-grained authorization mechanism that defines permissions related to user responsibilities. Policies define API-based permissions for operations on specific resources under certain conditions, allowing for more fine-grained, secure access control of cloud resources.

### NOTE

Policy-based authorization is useful if you want to allow or deny the access to an API.

An account has all the permissions required to call all APIs, but IAM users must be assigned the required permissions. The permissions required for calling an API are determined by the actions supported by the API. Only users who have been granted permissions allowing the actions can call the API successfully. For example, if an IAM user queries ECSs using an API, the user must have been granted permissions that allow the **ecs:servers:list** action.

## Supported Actions

CCM provides system-defined policies that can be directly used in IAM. You can also create custom policies and use them to supplement system-defined policies, implementing more refined access control. Operations supported by policies are specific to APIs. The following are common concepts related to policies:

- Permission: A statement in a policy that allows or denies certain operations.

- APIs: REST APIs that can be called in a custom policy
- Actions: Added to a custom policy to control permissions for specific operations.
- Dependent actions: When assigning an action to users, you also need to assign dependent permissions for that action to take effect.
- IAM projects or enterprise projects: Scope of users a permission is granted to. Policies that contain actions supporting both IAM and enterprise projects can be assigned to user groups and take effect in both IAM and Enterprise Management. Policies that only contain actions supporting IAM projects can be assigned to user groups and only take effect for IAM. Such policies will not take effect if they are assigned to user groups in Enterprise Management.

 NOTE

✓: supported; x: not supported

CCM supports the following actions that can be defined in custom policies:

- [SSL Certificate Manager \(SCM\)](#)
- [Private Certificate Authority \(PCA\)](#)

## 6.2 SSL Certificate Manager (SCM)

### Authorization information of APIs (v3)

Permission	API	Action	Dependent Permission	IAM Project (Project)	Enterprise Project (Enterprise Project)
Querying the certificate list	GET /v3/scm/certificates	scm:cert:list	-	✓	x
Obtaining details of a certificate	GET /v3/scm/certificates/{certificate_id}	scm:cert:get	-	✓	x
Deleting a certificate	DELETE /v3/scm/certificates/{certificate_id}	scm:cert:delete	-	✓	x

Permission	API	Action	Dependent Permission	IAM Project (Project)	Enterprise Project (Enterprise Project)
Pushing a certificate	POST /v3/scm/certificates/{certificate_id}/push	scm:cert:push	The following action needs to be added when a certificate is to be pushed to CDN: cdn:configuration:queryHttpsConf	√	x
Importing a certificate	POST /v3/scm/certificates/import	scm:cert:upload	-	√	x
Exporting a certificate	POST /v3/scm/certificates/{certificate_id}/export	scm:cert:download	-	√	x

## Authorization information of APIs (v2)

Permission	API	Action	Dependent Permission	IAM Project (Project)	Enterprise Project (Enterprise Project)
Querying the certificate list	GET /v2/{project_id}/scm/certlist	scm:cert:list	-	√	x
Querying the certificate details	GET /v2/{project_id}/scm/cert/{cert_id}	scm:cert:get	-	√	x
Querying the certificate type	GET /v2/{project_id}/scm/cert/product	scm:certType:get	-	√	x
Querying the certificate details	GET /v2/{project_id}/scm/product/{product_id}	scm:certProduct:get	-	√	x
Modifying a certificate	PUT /v2/{project_id}/scm/cert/{cert_id}	scm:cert:edit	-	√	x
Deleting a certificate	DELETE /v2/{project_id}/scm/cert/{cert_id}	scm:cert:delete	-	√	x

Permission	API	Action	Dependent Permission	IAM Project (Project)	Enterprise Project (Enterprise Project)
Pushing a certificate	POST /v2/{project_id}/scm/cert/{cert_id}/push	scm:cert:push	The following action needs to be added when a certificate is to be pushed to CDN: cdn:configuration:queryHttpsConf	✓	x
Querying push records	GET /v2/{project_id}/scm/cert/{cert_id}/push-history	scm:pushHistory:list	-	✓	x
Uploading a certificate	POST /v2/{project_id}/scm/cert/upload	scm:cert:upload	-	✓	x

## 6.3 Private Certificate Authority (PCA)

### Authorization information about APIs related to private CAs

Permission	API	Action
Creating a CA	POST /v1/private-certificateAuthorities	pca:ca:create
Canceling the scheduled deletion of a CA	POST /v1/private-certificateAuthorities/{ca_id}/restore	pca:ca:restore

Permission	API	Action
Querying details about a private CA	GET /v1/private-certificate-authorities/{ca_id}	pca:ca:get
Querying CSR details about a private CA	GET /v1/private-certificate-authorities/{ca_id}/csr	pca:ca:getCsr
Querying the private CA quota	GET /v1/private-certificate-authorities/quotas	pca:ca:quota
Exporting a private CA	POST /v1/private-certificate-authorities/{ca_id}/export	pca:ca:export
Deleting a private CA	DELETE /v1/private-certificate-authorities/{ca_id}	pca:ca:delete
Disabling a private CA	POST /v1/private-certificate-authorities/{ca_id}/disable	pca:ca:disable
Enabling a private CA	POST /v1/private-certificate-authorities/{ca_id}/enable	pca:ca:enable
Activating a private CA	POST /v1/private-certificate-authorities/{ca_id}/activate	pca:ca:active
Importing a CA	POST /v1/private-certificate-authorities/{ca_id}/import	pca:ca:import
Querying the private CA list	GET /v1/private-certificate-authorities	pca:ca:list

## Authorization information about APIs related to private certificates

Permission	API	Action
Querying details about a private certificate	GET /v1/private-certificates/{certificate_id}	pca:cert:get
Parsing the CSR of a private certificate	POST /v1/private-certificates/csr/parse	pca:cert:parseCsr
Exporting a private certificate	POST /v1/private-certificates/{certificate_id}/export	pca:cert:export

Permission	API	Action
Querying the private certificate quota	GET /v1/private-certificates/quotas	pca:cert:quota
Creating a private certificate	POST /v1/private-certificates	pca:ca:issueCert
Deleting a private certificate	DELETE /v1/private-certificates/{certificate_id}	pca:ca:delete
Revoking a private certificate	POST /v1/private-certificates/{certificate_id}/revoke	pca:cert:revoke
Creating a private certificate through a CSR	POST /v1/private-certificates/csr	pca:ca:issueCertThroughCSR
Querying the list of private certificates	GET /v1/private-certificates	pca:cert:list

# 7 Historical APIs

## 7.1 SCM APIs

### 7.1.1 Purchasing an SSL Certificate

#### Function

This API is used to purchase an SSL certificate.

##### NOTE

The request parameter **agree\_privacy\_protection** must be set to **true**. Otherwise, the certificate purchase application cannot be submitted.

#### URI

- URI format  
POST /v2/{project\_id}/scm/cert/purchase
- Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID.

#### Request

Request parameters

Parameter	Mandatory	Type	Description
cert_brand	Yes	String	Certificate brand. For example: GLOBALSIGN

Parameter	Mandatory	Type	Description
cert_type	Yes	String	Certificate type. Options: <ul style="list-style-type: none"><li>• DV_SSL_CERT</li><li>• DV_SSL_CERT_BASIC</li><li>• EV_SSL_CERT</li><li>• EV_SSL_CERT_PRO</li><li>• OV_SSL_CERT</li><li>• OV_SSL_CERT_PRO</li></ul>
domain_type	Yes	String	Domain name type. Options: <ul style="list-style-type: none"><li>• <b>SINGLE_DOMAIN</b>: single-domain name type.</li><li>• <b>MULTI_DOMAIN</b>: multi-domain name type.</li><li>• <b>WILDCARD</b>: wildcard domain name type.</li></ul>
effective_time	Yes	Integer	Certificate validity period, in years. Options: <ul style="list-style-type: none"><li>• <b>1</b>: Purchase a certificate with a validity period of one year.</li><li>• <b>2</b>: Purchase a certificate with a validity period of two years.</li></ul>
domain_numbers	Yes	Integer	Number of domain names. <ul style="list-style-type: none"><li>• If <b>domain_type</b> is set to <b>SINGLE_DOMAIN</b> or <b>WILDCARD</b>, the value of <b>domain_numbers</b> is 1.</li><li>• If <b>domain_type</b> is set to <b>MULTI_DOMAIN</b>, the value of <b>domain_numbers</b> ranges from 2 to 100.</li></ul>
order_number	Yes	Integer	Number of purchased certificates. Value range: 1-1000.

Parameter	Mandatory	Type	Description
agree_privacy_protection	Yes	Boolean	<p>Whether to agree with the privacy statement.</p> <ul style="list-style-type: none"> <li>• <b>true</b>: Agree with the privacy statement.</li> <li>• <b>false</b>: Disagree with the privacy statement.</li> </ul> <p>You can purchase a certificate only when this parameter is set to <b>true</b>.</p>

## Response

Response parameters

Parameter	Mandatory	Type	Description
order_id	Yes	String	Order ID.
cert	Yes	Array of cert objects	Certificate list. For details, see <a href="#">Table 7-1</a> .

**Table 7-1 cert**

Parameter	Mandatory	Type	Description
cert_id	Yes	String	Certificate ID.

## Example

The following describes how to purchase a multi-domain OV certificate issued by GlobalSign. Assume that the domain quantity is 5, and the validity period is one year.

- Example request

```
{
  "cert_brand": "GLOBALSIGN",
  "cert_type": "OV_SSL_CERT",
  "domain_type": "MULTI_DOMAIN",
  "effective_time": 1,
  "domain_numbers": 5,
  "order_number": 1,
  "agree_privacy_protection": true,
}
```

- Example response

```
{
  "order_id": "CS1803192259ROA8U"
  "cert": [
    {
      "cert_id": "scs1481110651012",
    }
  ]
}
```

```
        }]
    }
or
{
    "error_code": "SCM.XXXX",
    "error_msg": "XXXX"
}
```

## Status Codes

**Table 7-2** lists the normal status code returned by the API.

**Table 7-2** Status code

Status Code	Status	Description
200	OK	Request processed successfully.

For details about error code, see [Error Codes](#).

### 7.1.2 Querying the Certificate List

#### Function

This API is used to query the certificate list based on a certificate name or bound domain name.

---

#### NOTICE

This API will be discarded. You are advised to query certificates by referring to [Querying the Certificate Lists](#).

---

#### URI

- URI format

GET /v2/{project\_id}/scm/certlist?order\_status=&content=&sort\_key=&sort\_dir=&limit=&offset=

- Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID.

#### Request

Request parameters

Parameter	Mandatory	Type	Description
order_status	No	String	Certificate status. Options: <ul style="list-style-type: none"><li>• <b>PAID</b>: The certificate has been paid.</li><li>• <b>ISSUED</b>: The certificate has been issued.</li><li>• <b>CHECKING</b>: The certificate application is being reviewed.</li><li>• <b>CANCELCHECKING</b>: The certificate application cancellation is being reviewed.</li><li>• <b>UNPASSED</b>: The certificate application fails.</li><li>• <b>EXPIRED</b>: The certificate has expired.</li><li>• <b>REVOKING</b>: The certificate revocation application is being reviewed.</li><li>• <b>REVOKE</b>: The certificate has been revoked.</li><li>• <b>UPLOAD</b>: The certificate is being hosted.</li><li>• <b>SUPPLEMENTCHECKING</b>: Additional domain names to be added for a multi-domain certificate is being reviewed.</li><li>• <b>CANCELSUPPLEMENTING</b>: The cancellation on additional domain names to be added is being reviewed.</li></ul>
content	No	String	Keyword for search.
sort_key	No	String	Sorting criterion. Options: <ul style="list-style-type: none"><li>• <b>certExpiredTime</b>: certificate expiration time.</li><li>• <b>certStatus</b>: certificate status.</li><li>• <b>certUpdateTime</b>: certificate update time.</li></ul>

Parameter	Mandatory	Type	Description
sort_dir	No	String	Sorting method. Sorting is performed based on the sorting parameter <b>sort_key</b> . Options: <ul style="list-style-type: none"><li>• <b>ASC</b>: ascending order.</li><li>• <b>DESC</b>: descending order.</li></ul>
limit	No	Integer	Maximum number of pieces of certificate information to be displayed on each page. Options: <ul style="list-style-type: none"><li>• <b>10</b>: Each page displays up to 10 pieces of certificate information.</li><li>• <b>20</b>: Each page displays up to 20 pieces of certificate information.</li><li>• <b>50</b>: Each page displays up to 50 pieces of certificate information.</li></ul>
offset	No	Integer	Offset. Value range: 1-30.

## Response

Response parameters

Parameter	Mandatory	Type	Description
total	Yes	Integer	Number of certificates in a list.
free_remain	Yes	Integer	Remaining quota of the free test certificate.
order_list	Yes	Array of order_list objects	Certificate list. For details, see <a href="#">Table 7-3</a> .

**Table 7-3** order\_list

Parameter	Mandatory	Type	Description
cert_id	Yes	String	Certificate ID.
cert_name	Yes	String	Certificate name.
domain	Yes	String	Bound domain name.

Parameter	Mandatory	Type	Description
cert_type	Yes	String	Certificate type.
cert_brand	Yes	String	Certificate brand.
domain_type	Yes	String	Domain name type.
purchase_period	Yes	Integer	Validity period.
expired_time	Yes	String	Certificate expiration time.
order_status	Yes	String	Certificate status.
domain_num	Yes	Integer	Number of domain names.
wildcard_number	Yes	Integer	Number of wildcard domain names.
cert_des	Yes	String	Certificate description.

## Example

- Example request

None

- Example response

```
{  
    "total": 1,  
    "free_remain": "19",  
    "order_list": [  
        {"cert_id": "scs1481110651012",  
         "cert_name": "scs-0001",  
         "domain": "*example.com",  
         "cert_type": "GE00V01",  
         "cert_brand": "GLOBALSIGN",  
         "domain_type": " SINGLE_DOMAIN ",  
         "purchase_period": 1,  
         "expired_time": "15051501510501",  
         "order_state": "completed ",  
         "domain_num": 10,  
         "wildcard_number": 2,  
         "cert_des": "*****"  
    ]  
}
```

or

```
{  
    "error_code": "SCM.XXXX",  
    "error_msg": "XXXX"  
}
```

## Status Codes

[Table 7-4](#) lists the normal status code returned by the API.

**Table 7-4 Status code**

Status Code	Status	Description
200	OK	Request processed successfully.

For details about error code, see [Error Codes](#).

### 7.1.3 Querying Details of a Certificate

#### Function

This API is used to query details of a certificate.

**NOTICE**

This API will be discarded. You are advised to obtain certificate details by referring to [Obtaining Details of a Certificate](#).

#### URI

- URI format  
GET /v2/{project\_id}/scm/cert/{cert\_id}
- Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID.
cert_id	Yes	String	Certificate ID.

#### Request

Request parameters

None

#### Response

Response parameters

Parameter	Mandatory	Type	Description
cert_id	Yes	String	Certificate ID.
order_id	Yes	String	Order ID.
cert_name	Yes	String	Certificate name.

Parameter	Mandatory	Type	Description
cert_type	Yes	String	Certificate type. Example: OV
cert_brand	Yes	String	Certificate brand. Example: GLOBALSIGN
domain_type	Yes	String	Domain name type. Example: MULT_DOMAIN
domain_name	Yes	String	Domain name bound to a certificate. Example: funnyzx.com;abc.com
domain_number	Yes	Integer	Number of domains. Example: 3
cert_describe	Yes	String	Certificate description.
push_support	Yes	String	Whether a certificate can be pushed.
revoke_reason	Yes	String	Reason for certificate revocation.
domain_name	Yes	String	Domain name bound to a certificate. Multiple domain names are separated by semicolons (;). Example: www.example.com;www.example1.com;www.example2.com
company_name	Yes	String	Company name.
company_province	Yes	String	State or region where a company is located.
company_city	Yes	String	City where a company is located.
applicant_name	Yes	String	Name of a company contact.
applicant_phone	Yes	String	Phone number of a company contact.
applicant_email	Yes	String	Email of a company contact.

Parameter	Mandatory	Type	Description
contact_name	Yes	String	Name of a technical contact.
contact_phone	Yes	String	Phone number of a technical contact.
contact_email	Yes	String	Email of a technical contact.
status	Yes	String	Certificate status.
encrypt_type	Yes	String	Signature encryption algorithm.
country	Yes	String	Country code.
organization_unit	Yes	String	Company department.
DNS_push_status	Yes	String	DNS push status <ul style="list-style-type: none"><li>• <b>ON</b>: indicates that the push is successful.</li><li>• <b>OFF</b>: indicates that the push fails.</li><li>• <b>NONE</b>: indicates that the push function is not enabled.</li></ul>
auth	Yes	Array of auth objects	Certificate authentication status. For details, see <a href="#">Table 7-5</a> .

**Table 7-5 auth**

Parameter	Mandatory	Type	Description
method	Yes	String	Authentication method.
status	Yes	String	Certificate authentication status.
domain_name	Yes	String	Domain name for DNS authentication.
host_record	Yes	String	Host record of DNS authentication.
record_type	Yes	String	Record type of DNS authentication.
record	Yes	String	Record value of DNS authentication.

## Example

- Example request

None

- Example response

```
{  
    "cert_id": "scs1481110651012",  
    "order_id": "CS1803192259ROA8U",

{  
    "error_code": "SCM.XXXX",  
    "error_msg": "XXXX"  
}
```

## Status Codes

[Table 7-6](#) lists the normal status code returned by the API.

**Table 7-6** Status code

Status Code	Status	Description
200	OK	Request processed successfully.

For details about error code, see [Error Codes](#).

## 7.1.4 Modifying a Certificate

### Function

This API is used to change the name or description of a certificate.

### URI

- URI format  
PUT /v2/{project\_id}/scm/cert/{cert\_id}
- Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID.
cert_id	Yes	String	Certificate ID.

### Request

Request parameters

Parameter	Mandatory	Type	Description
modify_key	Yes	String	Change key. The value can be <b>CERT_NAME</b> or <b>DESCRIPTION</b> . <ul style="list-style-type: none"><li>• <b>CERT_NAME</b>: indicates the name of a certificate to be modified.</li><li>• <b>DESCRIPTION</b>: indicates the description of a certificate to be modified.</li></ul>
modify_value	Yes	String	Modification details. <ul style="list-style-type: none"><li>• If the change key is <b>CERT_NAME</b>, the value can contain only digits, letters, and hyphens (-). The value is a string of 0 to 63 characters and cannot be null.</li><li>• When the change key is <b>DESCRIPTION</b>, the value is a string of 0 to 255 characters and can be null.</li></ul>

### Response

Response parameters

Parameter	Mandatory	Type	Description
response_info	Yes	String	Request result.

## Examples

The following describes how to change the certificate name to **ssssaaaa**.

- Example request

```
{  
    "modify_key": "CERT_NAME",  
    "modify_value": "ssssaaaa"  
}
```

- Example response

```
{  
    "response_info": "success"  
}
```

or

```
{  
    "error_code": "SCM.XXXX",  
    "error_msg": "XXXX"  
}
```

## Status Codes

**Table 7-7** lists the normal status code returned by the API.

**Table 7-7** Status Code

Status Code	Status	Description
200	OK	Request processed successfully.

For details about error code, see [Error Codes](#).

## 7.1.5 Querying the Product Type of a Certificate

### Function

This API is used to query information about all products that are being sold on SCM.

### URI

- URI format  
GET /v2/{project\_id}/scm/cert/product
- Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID.

## Request

Request parameters

None

## Response

Response parameters

Parameter	Mandatory	Type	Description
type_list	Yes	Array of type_list objects	Product type list. For details, see <a href="#">Table 7-8</a> .

**Table 7-8** type\_list

Parameter	Mandatory	Type	Description
cert_type	Yes	String	Certificate type. <ul style="list-style-type: none"> <li>• <b>OV_SSL_CERT:</b> Organization Validation (OV) SSL certificate.</li> <li>• <b>EV_SSL_CERT:</b> Extended Validation (EV) SSL certificate.</li> </ul>
cert_brand	Yes	String	Certificate brand. <b>GLOBAL SIGN:</b> GlobalSign brand.
domain_type	Yes	String	Domain name type. <ul style="list-style-type: none"> <li>• <b>SINGLE_DOMAIN:</b> single-domain name type.</li> <li>• <b>MULTI_DOMAIN:</b> multi-domain name type.</li> <li>• <b>WILDCARD:</b> wildcard domain name type.</li> </ul>
product_id	Yes	String	Product ID.

Parameter	Mandatory	Type	Description
effective_time	Yes	Integer	Certificate validity period (year). <ul style="list-style-type: none"><li>• <b>1:</b> The validity period of the certificate is one year.</li><li>• <b>2:</b> The validity period of the certificate is two years.</li></ul>
product_name	Yes	String	Product name.

## Example

- Example request

None

- Example response

```
{  
  "type_list": [  
    {"  
      "cert_type": "OV_SSL_CERT",  
      "cert_brand": "GLOBALLYSIGN",  
      "domain_type": "SINGLE_DOMAIN",  
      "product_id": "00301-106005-0--0",  
      "effective_time": 1,  
      "product_name": "globallysign.single.ov.2"  
    }]  
}
```

or

```
{  
  "error_code": "SCM.XXXX",  
  "error_msg": "XXXX"  
}
```

## Status Codes

**Table 7-9** lists the normal status code returned by the API.

**Table 7-9** Status code

Status Code	Status	Description
200	OK	Request processed successfully.

For details about error code, see [Error Codes](#).

### 7.1.6 Querying the Product Details of a Certificate

#### Function

This API is used to query details about a specified certificate.

## URI

- URI format  
GET /v2/{project\_id}/scm/product/{product\_id}
- Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID.
product_id	Yes	String	Product ID.

## Request

Request parameters

None

## Response

Response parameters

Parameter	Mandatory	Type	Description
cert_type	Yes	String	Certificate type. <ul style="list-style-type: none"><li>• <b>OV_SSL_CERT:</b> Organization Validation (OV) SSL certificate.</li><li>• <b>EV_SSL_CERT:</b> Extended Validation (EV) SSL certificate.</li></ul>
cert_brand	Yes	String	Certificate brand. <b>GLOBALLYSIGN:</b> GlobalSign brand.
domain_type	Yes	String	Domain name type. <ul style="list-style-type: none"><li>• <b>SINGLE_DOMAIN:</b> single-domain name type.</li><li>• <b>MULTI_DOMAIN:</b> multi-domain name type.</li><li>• <b>WILDCARD:</b> wildcard domain name type.</li></ul>

Parameter	Mandatory	Type	Description
effective_time	Yes	Integer	Certificate validity period, in years. <ul style="list-style-type: none"><li>• <b>1:</b> The validity period of the certificate is one year.</li><li>• <b>2:</b> The validity period of the certificate is two years.</li></ul>

## Example

- Example request  
None
- Example response

```
{  
  "cert_type": "OV_SSL_CERT",  
  "cert_brand": "GLOBALLYSIGN",  
  "domain_type": "SINGLE_DOMAIN",  
  "effective_time": 1  
}
```

or

```
{  
  "error_code": "SCM.XXXX",  
  "error_msg": "XXXX"  
}
```

## Status Codes

**Table 7-10** lists the normal status code returned by the API.

**Table 7-10** Status code

Status Code	Status	Description
200	OK	Request processed successfully.

For details about error codes, see [Error Codes](#).

### 7.1.7 Applying for a Certificate

#### Function

This API is used to complete certificate application information, such as the domain name bound to a certificate and the applicant's detailed information.

The request parameter **agree\_privacy\_protection** must be set to **true**. Otherwise, the certificate application information cannot be submitted.

## URI

- URI format  
POST /v2/{project\_id}/scm/cert/{cert\_id}/complete
- Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID.
cert_id	Yes	String	Certificate ID.

## Request

Request parameters

Parameter	Mandatory	Type	Description
domain	Yes	String	<p>Domain name bound to a certificate.</p> <ul style="list-style-type: none"><li>• If the certificate to be purchased is a single-domain or wildcard domain name certificate, enter the single-domain or wildcard domain name.</li><li>• If the certificate to be purchased is a multi-domain certificate, select one domain name as the primary domain name.</li></ul> <p>Example: www.example.com</p>

Parameter	Mandatory	Type	Description
sans	No	String	<p>Additional domain name of the certificate that is bound to a multi-domain certificate.</p> <p>Set this parameter only when the certificate to be purchased is a multi-domain certificate and the number of additional domain names can be increased.</p> <p>Multiple domain names must be separated by semicolons (;).</p> <p>Example: www.example.com;www.example1.com;www.example2.com</p>
csr	No	String	Certificate CSR, which must match the domain name.
company_name	Yes	String	<p>Company name. This parameter is mandatory for certificates of the OV and EV types.</p> <p>The value must contain 0 to 63 characters.</p>
company_unit	No	String	<p>Department name. This parameter is optional for certificates of the OV and EV types.</p> <p>The value must contain 0 to 63 characters.</p>
company_province	Yes	String	<p>State or region where a company is located. This parameter is mandatory for certificates of the OV and EV types.</p> <p>The value must contain 0 to 63 characters.</p>

Parameter	Mandatory	Type	Description
company_city	Yes	String	City where a company is located. This parameter is mandatory for certificates of the OV and EV types. The value must contain 0 to 63 characters.
country	Yes	String	Country code. <ul style="list-style-type: none"><li>• <b>CN:</b> China</li><li>• <b>US:</b> United States</li></ul>
applicant_name	Yes	String	Applicant name. The value must contain 0 to 63 characters.
applicant_phone	Yes	String	Phone number of an applicant. Example: 13212345678
applicant_email	Yes	String	Email of an applicant. Example: example@huawei.com
contact_name	No	String	Name of a technical contact. The value must contain 0 to 63 characters.
contact_phone	No	String	Phone number of a technical contact. Example: 13212345678
contact_email	No	String	Email of a technical contact. Example: example@huawei.com
auto_dns_auth	No	Boolean	Whether to push DNS authentication information to Huawei Cloud DNS. <ul style="list-style-type: none"><li>• <b>true:</b> DNS authentication information is pushed to Huawei Cloud DNS.</li><li>• <b>false:</b> DNS authentication information is not pushed to Huawei Cloud DNS.</li></ul>

Parameter	Mandatory	Type	Description
agree_privacy_protection	Yes	Boolean	<p>Whether to agree with the privacy statement.</p> <ul style="list-style-type: none"><li>• <b>true</b>: Agree with the privacy statement.</li><li>• <b>false</b>: Disagree with the privacy statement.</li></ul> <p>You can submit your certificate application only when this parameter is set to <b>true</b>.</p>
domain_method	Yes	String	<p>Domain name verification method</p> <ul style="list-style-type: none"><li>• <b>dns</b>: This method is applied to DV, OV, and EV certificates.</li><li>• <b>file</b>: This method is applied only to IP certificates.</li><li>• <b>email</b>: This method is applied to OV, and EV certificates.</li></ul>

## Response

Response parameters

Parameter	Mandatory	Type	Description
request_info	Yes	String	Request result.

## Example

The following describes how to supplement information about a certificate.

- Example request

```
{  
    "domain": "www.xzz.com",  
    "company_name": "Huawei Chengdu branch",  
    "company_province": "Sichuan",  
    "company_city": "Chengdu",  
    "applicant_name": "Tom",  
    "applicant_phone": "13212345678",  
    "applicant_email": "9997342346@qq.com",  
    "csr": "",  
    "sans": "",  
    "country": "CN",  
    "company_unit": "Human Resource Dept",  
    "contact_name": "Jacky",  
    "contact_phone": "13512345678",
```

- ```
        "contact_email":"jk@jk.ff",
        "auto_dns_auth":false,
        "agree_privacy_protection":true
    }
```
- Example response

```
{ "request_info":"success"
```
  - or

```
{ "error_code": "SCM.XXXX",
  "error_msg": "XXXX"
}
```

## Status Codes

**Table 7-11** lists the normal status code returned by the API.

**Table 7-11** Status Codes

| Status Codes | Status | Description                     |
|--------------|--------|---------------------------------|
| 200          | OK     | Request processed successfully. |

For details about error codes, see [Error Codes](#).

## 7.1.8 Verifying a CSR

### Function

This API is used to verify a certificate signing request (CSR) and resolve the domain name.

### URI

- URI format  
POST /v2/{project\_id}/scm/check-csr
- Parameters

| Parameter  | Mandatory | Type   | Description |
|------------|-----------|--------|-------------|
| project_id | Yes       | String | Project ID. |

### Request

Request parameters

| Parameter | Mandatory | Type   | Description                  |
|-----------|-----------|--------|------------------------------|
| csr       | Yes       | String | Certificate signing request. |

## Response

Response parameters

| Parameter   | Mandatory | Type   | Description             |
|-------------|-----------|--------|-------------------------|
| domain_name | Yes       | String | Domain name in the CSR. |

## Example

The following describes how to verify a CSR.

- Example request

```
{  
    "csr": "-----BEGIN NEW CERTIFICATE REQUEST-----*****-----END NEW CERTIFICATE REQUEST-----"
```

- Example response

```
{  
    "domain": "a.example1.com"  
}
```

or

```
{  
    "error_code": "SCM.XXXX",  
    "error_msg": "XXXX"  
}
```

## Status Codes

[Table 7-12](#) lists the normal status code returned by the API.

**Table 7-12** Status code

| Status Code | Status | Description                     |
|-------------|--------|---------------------------------|
| 200         | OK     | Request processed successfully. |

For details about error codes, see [Error Codes](#).

## 7.1.9 Saving Certificate Information

### Function

This API is used to save certificate information entered during certificate application.

#### NOTE

The request parameter **agree\_privacy\_protection** must be set to **true**. Otherwise, certificate information cannot be saved.

## URI

- URI format  
POST /v2/{project\_id}/scm/cert/{cert\_id}/save
- Parameters

| Parameter  | Mandatory | Type   | Description     |
|------------|-----------|--------|-----------------|
| project_id | Yes       | String | Project ID.     |
| cert_id    | Yes       | String | Certificate ID. |

## Request

### Request parameters

| Parameter    | Mandatory | Type   | Description                                                                                                                        |
|--------------|-----------|--------|------------------------------------------------------------------------------------------------------------------------------------|
| domain       | Yes       | String | Domain name bound to a certificate.                                                                                                |
| sans         | No        | String | Additional domain names of a multi-domain certificate. Multiple domain names are separated by semicolons (;).                      |
| csr          | No        | String | Certificate csr string, which must match the domain name.                                                                          |
| company_name | Yes       | String | Company name. This parameter is mandatory for certificates of the OV and EV types.<br>The value must contain 0 to 63 characters.   |
| company_unit | No        | String | Department name. This parameter is optional for certificates of the OV and EV types.<br>The value must contain 0 to 63 characters. |

| Parameter        | Mandatory | Type   | Description                                                                                                                                                    |
|------------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| company_province | Yes       | String | State or region where a company is located. This parameter is mandatory for certificates of the OV and EV types.<br>The value must contain 0 to 63 characters. |
| company_city     | Yes       | String | City where a company is located. This parameter is mandatory for certificates of the OV and EV types.<br>The value must contain 0 to 63 characters.            |
| country          | Yes       | String | Country code.                                                                                                                                                  |
| applicant_name   | Yes       | String | Applicant name.<br>The value must contain 0 to 63 characters.                                                                                                  |
| applicant_phone  | Yes       | String | Phone number of an applicant.<br>Example: 13212345678                                                                                                          |
| applicant_email  | Yes       | String | Email of an applicant.<br>Example:<br>example.huawei.com                                                                                                       |
| contact_name     | No        | String | Name of a technical contact.<br>The value must contain 0 to 63 characters.                                                                                     |
| contact_phone    | No        | String | Phone number of a technical contact.<br>Example: 13212345678                                                                                                   |
| contact_email    | No        | String | Email of a technical contact.<br>Example:<br>example.huawei.com                                                                                                |

| Parameter                | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                      |
|--------------------------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| agree_privacy_protection | Yes       | Boolean | <p>Whether to agree with the privacy statement.</p> <ul style="list-style-type: none"> <li>• <b>true</b>: Agree with the privacy statement.</li> <li>• <b>false</b>: Disagree with the privacy statement.</li> </ul> <p>You can save certificate information only when this parameter is set to <b>true</b>.</p> |

## Response

Response parameters

| Parameter    | Mandatory | Type   | Description     |
|--------------|-----------|--------|-----------------|
| request_info | Yes       | String | Request result. |

## Example

The following describes how to save supplemented information about a certificate.

- Example request

```
{
    "domain": "www.xzz.com",
    "company_name": "Huawei Chengdu branch",
    "company_province": "Sichuan",
    "company_city": "Chengdu",
    "applicant_name": "Tom",
    "applicant_phone": "13212345678",
    "applicant_email": "9997342346@qq.com",
    "csr": "",
    "sans": "",
    "country": "CN",
    "company_unit": "Human Resource Dept",
    "contact_name": "Jacky",
    "contact_phone": "13512345678",
    "contact_email": "jk@jk.ff",
    "agree_privacy_protection": true
}
```

- Example response

```
{
    "request_info": "success"
}
```

or

```
{
    "error_code": "SCM.XXXX",
    "error_msg": "XXXX"
}
```

## Status Codes

**Table 7-13** lists the normal status code returned by the API.

**Table 7-13** Status codes

| Status Code | Status | Description                     |
|-------------|--------|---------------------------------|
| 200         | OK     | Request processed successfully. |

For details about error codes, see [Error Codes](#).

## 7.1.10 Reading the Information Entered When Applying for a Certificate

### Function

This API is used to read the saved information about a certificate.

### URI

- URI format  
POST /v2/{project\_id}/scm/cert/{cert\_id}/read
- Parameters

| Parameter  | Mandatory | Type   | Description     |
|------------|-----------|--------|-----------------|
| project_id | Yes       | String | Project ID.     |
| cert_id    | Yes       | String | Certificate ID. |

### Request

Request parameters

None

### Response

Response parameters

| Parameter   | Mandatory | Type   | Description                                                       |
|-------------|-----------|--------|-------------------------------------------------------------------|
| domain_name | Yes       | String | Domain name bound to a certificate.<br>Example:<br>www.domain.com |

| Parameter        | Mandatory | Type   | Description                                                                                                                                                                                                              |
|------------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sans             | Yes       | String | Additional domain names of a multi-domain certificate. Multiple domain names are separated by semicolons (;).<br>If a single-domain or wildcard domain certificate is applied for, the value of this parameter is empty. |
| CSR              | Yes       | String | Certificate signing request.                                                                                                                                                                                             |
| country          | Yes       | String | Country code. Example: <ul style="list-style-type: none"><li>• <b>CN</b>: China</li><li>• <b>US</b>: United States</li></ul>                                                                                             |
| company_name     | Yes       | String | Company name.                                                                                                                                                                                                            |
| company_unit     | Yes       | String | Department name                                                                                                                                                                                                          |
| company_province | Yes       | String | State or region where a company is located.<br>Example: Sichuan                                                                                                                                                          |
| company_city     | Yes       | String | City where a company is located.<br>Example: Chengdu                                                                                                                                                                     |
| applicant_name   | Yes       | String | Applicant name.<br>Example: Tom                                                                                                                                                                                          |
| applicant_phone  | Yes       | String | Phone number of an applicant.<br>Example: 13412345678                                                                                                                                                                    |
| applicant_email  | Yes       | String | Email of an applicant.<br>Example: example.huawei.com                                                                                                                                                                    |
| contact_name     | Yes       | String | Name of a technical contact.                                                                                                                                                                                             |
| contact_phone    | Yes       | String | Phone number of a technical contact.                                                                                                                                                                                     |
| contact_email    | Yes       | String | Email of a technical contact.                                                                                                                                                                                            |

| Parameter | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                     |
|-----------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bl        | Yes       | String | <p>Whether the picture of bank account opening permit has been uploaded.</p> <ul style="list-style-type: none"> <li>• <b>0:</b> The picture of bank account opening permit has not been uploaded.</li> <li>• <b>1:</b> The picture of bank account opening permit has been uploaded.</li> </ul> |
| tl        | Yes       | String | <p>Whether the business license of the company has been uploaded.</p> <p><b>0:</b> The business license of the company has not been uploaded.</p> <p><b>1:</b> The business license of the company has been uploaded.</p>                                                                       |

## Example

- Example request

None

- Example response

```
{
    "domain_name": "www.xzz.com",
    "sans": "",
    "CSR": null,
    "country": "CN",
    "company_unit": "Human Resource Dept",
    "company_name": "Huawei Chengdu branch",
    "company_province": "Sichuan",
    "company_city": "Chengdu",
    "applicant_name": "Tom",
    "applicant_phone": "13245678932",
    "applicant_email": "1027342346@qq.com",
    "contact_name": "Jacky",

    "contact_email": "jk@jk.ff",
    "bl": "0",
    "tl": "1"
}
```

or

```
{
    "error_code": "SCM.XXXX",
    "error_msg": "XXXX"
}
```

## Status Codes

**Table 7-14** lists the normal status code returned by the API.

**Table 7-14** Status code

| Status Code | Status | Description                     |
|-------------|--------|---------------------------------|
| 200         | OK     | Request processed successfully. |

For details about error codes, see [Error Codes](#).

### 7.1.11 Canceling an Application

#### Function

This API is used to cancel an application of certificate reviewing.

#### URI

- URI format  
POST /v2/{project\_id}/scm/cert/{cert\_id}/cancel-cert
- Parameters

| Parameter  | Mandatory | Type   | Description     |
|------------|-----------|--------|-----------------|
| project_id | Yes       | String | Project ID.     |
| cert_id    | Yes       | String | Certificate ID. |

#### Request

Request parameters

None

#### Response

Response parameters

| Parameter | Mandatory | Type   | Description     |
|-----------|-----------|--------|-----------------|
| cert_id   | Yes       | String | Certificate ID. |
| message   | Yes       | String | Request result. |

#### Example

- Example request  
None

- Example response

```
{  
    "cert_id": "scs1481110651012",  
    "message": "success"  
}
```

or

```
{  
    "error_code": "SCM.XXXX",  
    "error_msg": "XXXX"  
}
```

## Status Codes

**Table 7-15** lists the normal status code returned by the API.

**Table 7-15** Status code

| Status Code | Status | Description                     |
|-------------|--------|---------------------------------|
| 200         | OK     | Request processed successfully. |

For details about error codes, see [Error Codes](#).

### 7.1.12 Deleting a Certificate

#### Function

This API is used to delete a certificate, that is, delete a certificate from HUAWEI CLOUD.

#### NOTICE

This API will be discarded. You are advised to delete a certificate by referring to [Deleting a Certificate](#).

#### URI

- URI format

DELETE /v2/{project\_id}/scm/cert/{cert\_id}

- Parameter description

| Parameter  | Mandatory | Type   | Description     |
|------------|-----------|--------|-----------------|
| project_id | Yes       | String | Project ID.     |
| cert_id    | Yes       | String | Certificate ID. |

#### Request

Request parameters

None

## Response

Response parameters

| Parameter | Mandatory | Type   | Description     |
|-----------|-----------|--------|-----------------|
| message   | Yes       | String | Request result. |

## Example

- Example request

None

- Example response

```
{  
    "message": "success"  
}
```

or

```
{  
    "error_code": "SCM.XXXX",  
    "error_msg": "XXXX"  
}
```

## Status Codes

[Table 7-16](#) lists the normal status code returned by the API.

**Table 7-16** Status code

| Status Code | Status | Description                     |
|-------------|--------|---------------------------------|
| 200         | OK     | Request processed successfully. |

For details about error codes, see [Error Codes](#).

## 7.1.13 Uploading Authentication Information

### Function

This API is used to upload the authentication information picture required for certificate review.

### URI

- URI format  
`POST /v2/{project_id}/scm/cert/{cert_id}/info/{type}/upload_authentication`
- Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                                                                                             |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID.                                                                                                                                                                             |
| type       | Yes       | String | Type of the content to be uploaded.<br><ul style="list-style-type: none"> <li>• <b>BL:</b> bank account opening permit.</li> <li>• <b>TL:</b> business license of a company.</li> </ul> |
| cert_id    | Yes       | String | Certificate ID.                                                                                                                                                                         |

## Request

Request parameters

None

## Response

Response parameters

| Parameter    | Mandatory | Type   | Description     |
|--------------|-----------|--------|-----------------|
| request_info | Yes       | String | Request result. |

## Example

- Example request

```
{
    <Upload content>
}
```

- Example response

```
{
    "request_info": "success"
}
```

or

```
{
    "error_code": "SCM.XXXX",
    "error_msg": "XXXX"
}
```

## Status Codes

**Table 7-17** lists the normal status code returned by the API.

**Table 7-17** Status code

| Status Code | Status | Description                     |
|-------------|--------|---------------------------------|
| 200         | OK     | Request processed successfully. |

For details about error codes, see [Error Codes](#).

## 7.1.14 Downloading a Certificate

### Function

This API is used to download a certificate.

#### NOTICE

This API will be discarded. You are advised to export a certificate by referring to [Exporting a Certificate](#).

### URI

- URI format  
GET /v2/{project\_id}/scm/cert/{cert\_id}/cert\_file
- Parameter description

| Parameter  | Mandatory | Type   | Description     |
|------------|-----------|--------|-----------------|
| project_id | Yes       | String | Project ID.     |
| cert_id    | Yes       | String | Certificate ID. |

### Requests

Request parameters

None

### Responses

Certificate file, which is a compressed package with the .rar extension.

### Examples

- Example request  
None
- Example response

```
{<Object Content>}
```

or

```
{"error_code": "SCM.XXXX", "error_msg": "XXXX"}
```

## Status Codes

**Table 7-18** lists the normal status code returned by the API.

**Table 7-18** Status code

| Status Code | Status | Description                     |
|-------------|--------|---------------------------------|
| 200         | OK     | Request processed successfully. |

For details about error codes, see [Error Codes](#).

## 7.1.15 Uploading a Certificate

### Function

This API is used to upload a certificate to SCM.

### URI

- URI format  
POST /v2/{project\_id}/scm/cert/upload
- Parameters

| Parameter  | Mandatory | Type   | Description |
|------------|-----------|--------|-------------|
| project_id | Yes       | String | Project ID. |

### Request

Request parameters

| Parameter   | Mandatory | Type   | Description                                                       |
|-------------|-----------|--------|-------------------------------------------------------------------|
| cert_name   | Yes       | String | Certificate name.<br>The value is a string of 0 to 63 characters. |
| cert        | Yes       | String | Certificate chain content.                                        |
| private_key | Yes       | String | Private key of a certificate.                                     |

### Response

Response parameters

| Parameter | Mandatory | Type   | Description     |
|-----------|-----------|--------|-----------------|
| cert_id   | Yes       | String | Certificate ID. |

## Example

The following describes how to upload a certificate named **test**.

- Example request

```
{  
    "cert_name": "test",  
    "cert": "-----BEGIN CERTIFICATE----- *** -----END CERTIFICATE-----",  
    "private_key": "-----BEGIN RSA PRIVATE KEY----- *** -----END RSA PRIVATEKEY-----"  
}
```

- Example response

```
{  
    "cert_id": "scs1481110651012"  
}
```

or

```
{  
    "error_code": "SCM.XXXX",  
    "error_msg": "XXXX"  
}
```

## Status Codes

**Table 7-19** lists the normal status code returned by the API.

**Table 7-19** Status code

| Status Code | Status | Description                     |
|-------------|--------|---------------------------------|
| 200         | OK     | Request processed successfully. |

For details about error codes, see [Error Codes](#).

## 7.1.16 Revoking a Certificate

### Function

This API is used to revoke a certificate.

### URI

- URI format

POST /v2/{project\_id}/scm/cert/{cert\_id}/revoke

- Parameters

| Parameter  | Mandatory | Type   | Description |
|------------|-----------|--------|-------------|
| project_id | Yes       | String | Project ID. |

| Parameter | Mandatory | Type   | Description     |
|-----------|-----------|--------|-----------------|
| cert_id   | Yes       | String | Certificate ID. |

## Request

Request parameters

| Parameter | Mandatory | Type   | Description                                                                        |
|-----------|-----------|--------|------------------------------------------------------------------------------------|
| reason    | Yes       | String | Reason for revoking a certificate.<br>The value is a string of 0 to 63 characters. |

## Response

Response parameters

| Parameter | Mandatory | Type   | Description                |
|-----------|-----------|--------|----------------------------|
| message   | Yes       | String | Revocation request result. |

## Examples

The following uses the certificate revocation reason "certificate information filled incorrectly" as an example.

- Example request

```
{  
    "reason": "certificate information filled incorrectly",  
}
```

- Example response

```
{  
    "message": "success"  
}
```

or

```
{  
    "error_code": "SCM.XXXX",  
    "error_msg": "XXXX"  
}
```

## Status Codes

[Table 7-20](#) lists the normal status code returned by the API.

**Table 7-20** Status code

| Status Code | Status | Description                     |
|-------------|--------|---------------------------------|
| 200         | OK     | Request processed successfully. |

For details about error codes, see [Error Codes](#).

## 7.1.17 Pushing a Certificate

### Function

This API is used to push an SSL certificate to other HUAWEI CLOUD services, such as Web Application Firewall (WAF) and Content Delivery Network (CDN).

**NOTICE**

This API will be discarded. You are advised to push a certificate by referring to [Pushing a Certificate](#).

### URI

- URI format  
POST /v2/{project\_id}/scm/cert/{cert\_id}/push
- Parameters

| Parameter  | Mandatory | Type   | Description     |
|------------|-----------|--------|-----------------|
| project_id | Yes       | String | Project ID.     |
| cert_id    | Yes       | String | Certificate ID. |

### Request

#### Request parameters

| Parameter      | Mandatory | Type   | Description                                                                                    |
|----------------|-----------|--------|------------------------------------------------------------------------------------------------|
| service_type   | Yes       | String | Type of the service to which a certificate is pushed.<br>Options:<br><b>CDN</b> and <b>WAF</b> |
| remote_project | Yes       | String | Region where the target service to which a certificate is pushed.                              |

## Response

Response parameters

| Parameter | Mandatory | Type   | Description     |
|-----------|-----------|--------|-----------------|
| message   | Yes       | String | Request result. |

## Example

The following describes how to push a certificate to WAF in region **ap-southeast-1**.

- Example request

```
{  
    "service_type": "WAF",  
    "remote_project": "ap-southeast-1"  
}
```

- Example response

```
{  
    "message": "success"  
}
```

or

```
{  
    "error_code": "SCM.XXXX",  
    "error_msg": "XXXX"  
}
```

## Status Codes

[Table 7-21](#) lists the normal status code returned by the API.

**Table 7-21** Status code

| Status Code | Status | Description                     |
|-------------|--------|---------------------------------|
| 200         | OK     | Request processed successfully. |

For details about error codes, see [Error Codes](#).

### 7.1.18 Querying Push Records

#### Function

This API is used to query the last 10 certificate push records, which are to be pushed to another HUAWEI CLOUD service.

#### URI

- URI format

GET /v2/{project\_id}/scm/cert/{cert\_id}/push-history

- Parameters

| Parameter  | Mandatory | Type   | Description     |
|------------|-----------|--------|-----------------|
| project_id | Yes       | String | Project ID.     |
| cert_id    | Yes       | String | Certificate ID. |

## Request

Request parameters

None

## Response

Response parameters

| Parameter         | Mandatory | Type                               | Description                                                     |
|-------------------|-----------|------------------------------------|-----------------------------------------------------------------|
| push_history_list | Yes       | Array of push_history_list objects | Push record list. For details, see <a href="#">Table 7-22</a> . |

**Table 7-22** push\_history\_list

| Parameter           | Mandatory | Type   | Description                                                                                                                                                               |
|---------------------|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| push_time           | Yes       | String | Push time, in milliseconds.                                                                                                                                               |
| push_remote_project | Yes       | String | Push project.                                                                                                                                                             |
| push_service        | Yes       | String | Push service type. <ul style="list-style-type: none"> <li>• <b>WAF:</b> A certificate is pushed to WAF.</li> <li>• <b>CDN:</b> A certificate is pushed to CDN.</li> </ul> |

## Example

- Example request

None

- Example response

```
{
  "push_history_list": [
    {
      "push_time": "1556257820000",
      "push_remote_project": null,
      "push_service": "CDN"
    }
  ]
}
```

```
        },
        {
            "push_time": "1556257447000",
            "push_remote_project": "ap-southeast-1",
            "push_service": "WAF"
        }
    ]
}

or

{
    "error_code": "SCM.XXXX",
    "error_msg": "XXXX"
}
```

## Status Codes

**Table 7-23** lists the normal status code returned by the API.

**Table 7-23** Status code

| Status Code | Status | Description                     |
|-------------|--------|---------------------------------|
| 200         | OK     | Request processed successfully. |

For details about error codes, see [Error Codes](#).

### 7.1.19 Canceling Authorization for Privacy Information

#### Function

This API is used to cancel authorization for privacy information and delete the privacy data saved in SCM.

#### URI

- URI format  
`DELETE /v2/{project_id}/scm/privacy-protection/{cert_id}`
- Parameters

| Parameter  | Mandatory | Type   | Description     |
|------------|-----------|--------|-----------------|
| project_id | Yes       | String | Project ID.     |
| cert_id    | Yes       | String | Certificate ID. |

#### Request

Request parameters

None

## Response

Response parameters

| Parameter | Mandatory | Type   | Description     |
|-----------|-----------|--------|-----------------|
| message   | Yes       | String | Request result. |

## Example

- Example request  
None
- Example response  
{  
    "message": "success"  
}  
or  
{  
    "error\_code": "SCM.XXXX",  
    "error\_msg": "XXXX"  
}

## Status Codes

**Table 7-24** lists the normal status code returned by the API.

**Table 7-24** Status code

| Status Code | Status | Description                     |
|-------------|--------|---------------------------------|
| 200         | OK     | Request processed successfully. |

For details about error codes, see [Error Codes](#).

### 7.1.20 Adding an Additional Domain Name

#### Function

This API is used to add an additional domain name. If you have a multi-domain SSL certificate and available quota for additional domain names, you can add additional domain names for the certificate after it is issued.

#### URI

- URI format  
POST /v2/{project\_id}/scm/cert/{cert\_id}/supplement
- Parameters

| Parameter  | Mandatory | Type   | Description     |
|------------|-----------|--------|-----------------|
| project_id | Yes       | String | Project ID.     |
| cert_id    | Yes       | String | Certificate ID. |

## Request

Request parameters

| Parameter | Mandatory | Type   | Description                                                                                                                                                                                                            |
|-----------|-----------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ori_sans  | Yes       | String | Additional domain name bound to a multi-domain certificate.<br>If multiple domain names are displayed, the domain names are separated by semicolons (;).<br>Example:<br>example.domain.com;example.domain1.com         |
| add_sans  | No        | String | Additional domain name to be added for a multi-domain certificate.<br>If multiple domain names need to be entered, separate the domain names by semicolons (;).<br>Example:<br>example.domain2.com;example.domain3.com |
| email     | No        | String | Email of a contact.                                                                                                                                                                                                    |

## Response

Response parameters

| Parameter    | Mandatory | Type   | Description     |
|--------------|-----------|--------|-----------------|
| request_info | Yes       | String | Request result. |

## Example

The following describes how to add an additional domain name **example.domain.com**.

- Example request

```
{
  "ori_sans": "abc.com;xyz.com",
```

- ```
        "add_sans": "example.domain.com",
        "email": "example@xx.com"
    }
● Example response
{
    "request_info": "success"
}
or
{
    "error_code": "SCM.XXXX",
    "error_msg": "XXXX"
}
```

## Status Codes

[Table 7-25](#) lists the normal status code returned by the API.

**Table 7-25** Status codes

Status Code	Status	Description
200	OK	Request processed successfully.

For details about error codes, see [Error Codes](#).

### 7.1.21 Querying Domain Name Verification Information

#### Function

This API is used to query domain name verification details.

#### URI

- URI format  
GET /v2/{project\_id}/scm/cert/{cert\_id}/domain-verify
- Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID.
cert_id	Yes	String	Certificate ID.

#### Request

Request parameters

None.

#### Response

Response parameters

Parameter	Mandatory	Type	Description
domain_name	Yes	String	Domain name for ownership verification.
domain_email	Yes	String	Email address used for domain name verification.
record_name	Yes	String	Host record
record_value	Yes	String	DNS record
record_type	Yes	String	Record type
domain_method	Yes	String	Verification method
applicant_email	Yes	String	Email of the applicant.
auto_dns_auth	Yes	boolean	Whether the domain name ownership is verified in an automated manner.

## Example

```
{  
    "domain_name": "huawei.com",  
    "domain_email": null,  
    "record_name": "_dnsauth.huawei.com",  
    "record_value": "202305150000002aurxma1tun2fgzz0jbs9h5lsekf8gloq57mb8m9jist465m",  
    "record_type": "TXT",  
    "domain_method": "DNS",  
    "applicant_email": "huawei@huawei.com",  
    "auto_dns_auth": true  
}
```

## Status Code

[Table 7-26](#) lists the normal status code returned by the API.

**Table 7-26** Status code

Status Code	Code	Description
200	OK	Request processed successfully.

For details about error codes, see [Error Codes](#).

# A Appendix

## A.1 Status Codes

### Statuses Code to SCM APIs

Status Code	Status	Description
200	OK	Request processed successfully.
202	Accept	The job was successfully delivered. However, it will be postponed because the system is busy currently.
204	No Content	The request is processed successfully and no content is returned.
300	multiple choices	The requested resource has multiple available responses.
400	Bad Request	The request parameter is incorrect.
401	Unauthorized	A username and password are required.
403	Forbidden	The server understood the request, but is refusing to fulfill it.
404	Not Found	The requested resource does not exist or not found.
405	Method Not Allowed	The method specified in the request is not allowed.
406	Not Acceptable	The response generated by the server cannot be accepted by the client.
407	Proxy Authentication Required	You must use the proxy server for authentication. Then, the request can be processed.

Status Code	Status	Description
408	Request Timeout	The request timed out.
409	Conflict	The request cannot be processed due to a conflict.
500	Internal Server Error	Internal service error.
501	Not Implemented	Failed to complete the request. The server does not support the requested function.
502	Bad Gateway	Failed to complete the request, because the server receives an invalid request.
503	Service Unavailable	Failed to complete the request because the system is temporarily abnormal.
504	Gateway Timeout	A gateway timeout error occurs.

## Statues Codes to Private Certificate Management APIs

Status Codes	Status	Description
200	OK	Request processed successfully.
201	Created	Resource created.
204	NO Content	Request succeeded. No response body is returned.
400	Bad Request	The request parameter is incorrect.
401	Unauthorized	Incorrect or illegal client authentication information.
403	Forbidden	The server understood the request, but is refusing to fulfill it.
404	Not Found	The requested resource does not exist or not found.
500	Internal Server Error	Internal service error.

## A.2 Error Codes

## A.2.1 Error Codes

Status Code	Error Codes	Error Message	Description	Solution
400	SCM.0003	Tenant has no privilege.	User information is not according with information of cert Owner	Please operate your own certificate.
400	SCM.0005	Incorrect request parameter.	Incorrect request parameter	Enter a valid request parameter.
400	SCM.0006	The uploaded certificate failed to be resolved. Ensure that the uploaded certificate has been issued.	Fail to parse certificate	Please upload the issued certificate.
400	SCM.0008	Abnormal certificate ID	Abnormal certificate ID	Enter a correct certificate ID.
400	SCM.0009	Failed to upload the certificate because no domain name is bound to the certificate.	Failed to upload the certificate. No domain name is bound to the certificate.	Associate the domain name with the certificate before uploading.
400	SCM.0010	This operation is not allowed by the current certificate type or status.	The type or the current status of the certificate does not support this operation.	Enter a certificate type or a certificate status that supports this operation.

Status Code	Error Codes	Error Message	Description	Solution
400	SCM.0011	The max number of free certificates for the current user has been reached, and you cannot continue to purchase free certificates.	The max number of free certificates for the current user has been reached, and you cannot continue to purchase free certificates.	Please dont add further certificates.
400	SCM.0012	The uploaded private key failed to be resolved. Ensure that the certificate has been issued.	The uploaded private key failed to be resolved. Ensure that the uploaded certificate has been issued.	Enter a valid certificate private key.
400	SCM.0014	The uploaded certificate does not match the private key.	The uploaded certificate does not match the uploaded private key.	Upload a valid certificate and private key.
400	SCM.0015	The number or format of domain names entered does not meet the requirements of the your certificate.	The number or format of the domains you entered is not in accordance with requirements of your certificate.	Upload a single-domain or multiple-domain certificate.
400	SCM.0016	Failed to order.	Failed to order.	Please contact technical support.
400	SCM.0020	Incorrect certificate ID.	Incorrect cert ID.	Upload a valid certificate ID.
400	SCM.0023	Modify key format error.	Modify key format error.	Please input nonNull key.
400	SCM.0024	Modify value format error.	Modify value format error.	Please input nonNull value.

Status Code	Error Codes	Error Message	Description	Solution
400	SCM.0025	Exceed the limit	Exceed the limit	The certificate exceeds the resign period
400	SCM.0026	Revoke cert error	Revoke cert error	Please contact technical support.
400	SCM.0027	Have no revoke reason	Have no revoke reason	Please input revoke reason.
400	SCM.0028	Push cert error	Push cert error	Please contact technical support.
400	SCM.0030	Certificates cannot be pushed to this service.	Unsupported push service error	Enter a correct service name to which the certificate is pushed.
400	SCM.0031	Certificate parsing error.	Parse certificate error.	Upload a correct certificate.
400	SCM.0032	Incorrect certificate name.	Invalid certificate name.	Enter a valid certificate name.
400	SCM.0033	Csr not bind domain.	Csr not bind domain.	Enter a valid csr with domain.
400	SCM.0034	Csr parse error.	Csr parse error.	Enter a valid csr.
400	SCM.0035	Csr domain not match input domain.	Csr domain not match input domain.	Keep the domain names the same
400	SCM.0036	Domain number not match product.	Domain number not match product.	Please enter the correct number of domain names
400	SCM.0039	The updated quota value must be greater than the currently used quota.	The updated quota value must be greater than the currently used quota.	Please input correct quota value.
400	SCM.0042	Cert has expired.	Cert has expired.	Please dont upload expired cert.

Status Code	Error Codes	Error Message	Description	Solution
400	SCM.0044	Permission denied,please obtain {0} permission.	Permission denied,please obtain {0} permission.	Please obtain permission first.
400	SCM.0049	Cert brand error.	Cert brand error.	Please enter cert brand.
400	SCM.0050	Cert type error.	Cert type error.	Please enter correct cert type.
400	SCM.0051	Domain type error.	Domain type error.	Please enter correct domain type.
400	SCM.0052	Cert effective time error.	Cert effective time error.	Please enter correct cert.
400	SCM.0059	The certificate private key is empty.	No certificate private key found.	Contact the customer service.
400	SCM.0060	Order number error.	Order number error.	Please enter right order number.
400	SCM.0061	Region parameter error.	Region parameter error.	Please enter right region.
400	SCM.0063	Duplicate domain error.	Duplicate domain error.	Please enter unique domain.
400	SCM.0064	The order is executing.	The order is executing.	Please do not place repeated orders.
400	SCM.0065	File size exceeds limit.	File size exceeds limit.	Please enter the correct size file.
400	SCM.0066	Current domain type not allowed to operate.	Current domain type not allowed to operate.	Contact the customer service.
400	SCM.0067	Sans changed.	Sans changed.	Please enter correct sans.
400	SCM.0068	Unsupported region.	Unsupported region.	Please contact technical support.

Status Code	Error Codes	Error Message	Description	Solution
400	SCM.0070	Incorrect format of the domain bound to the certificate to be uploaded.	The format of the domain bound to the certificate is incorrect.	Upload a valid certificate.
400	SCM.0072	SCM does not support this status.	SCM does not support this status.	Please contact technical support.
400	SCM.0073	Help content format error.	Help content format error.	Please enter right content.

## A.2.2 PCA Error Codes

Status Code	Error Codes	Error Message	Description	Solution
400	PCA.00020001	Incorrect parameter.	Incorrect parameter.	Please confirm whether the input parameters are correct.
400	PCA.00020101	Incorrect certificate distinguished name.	Incorrect certificate distinguished name.	Please confirm whether all fields in the parameter distinguished_name meet the requirements.

Status Code	Error Codes	Error Message	Description	Solution
400	PCA.00020102	Invalid key algorithm. Only RSA2048, RSA4096, EC256, and EC384 are supported.	Invalid key algorithm. Only RSA2048, RSA4096, EC256, and EC384 are supported.	Please confirm whether the key algorithm input is correct.
400	PCA.00020103	Invalid signature hash algorithm. Only SHA256, SHA384, and SHA512 are supported.	Invalid signature hash algorithm. Only SHA256, SHA384, and SHA512 are supported.	Please confirm whether the entered signature hash algorithm is correct.
400	PCA.00020109	Invalid validity period type or value. Only year, month, or day supported.	Invalid validity period type or value. Only year, month, or day supported.	Please confirm whether the validity period type and value entered are correct.
400	PCA.00020110	Incorrect domain name.	Incorrect domain name.	Please confirm that the length of the entered domain name is in the range of [1,64] and conforms to the domain name rules.
400	PCA.00020111	Invalid IP. Enter an IPv4 address.	Invalid IP. Enter an IPv4 address.	Please confirm that the IP address conforms to IPv4 rules.
400	PCA.00020112	Invalid alternative name type of the certificate subject. Enter an IP or DNS.	Invalid alternative name type of the certificate subject. Enter an IP or DNS.	Please confirm that the type is IP or DNS.

Status Code	Error Codes	Error Message	Description	Solution
400	PCA.00020201	Invalid CA ID. Valid CA IDs use a hexadecimal xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx format.	Invalid CA ID. Valid CA IDs use a hexadecimal xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx format.	Please enter the correct CA certificate ID.
400	PCA.00020202	Invalid CA type. Only root CA and subordinate CA are supported.	Invalid CA type. Only root CA and subordinate CA are supported.	Invalid CA type. Only root CA and subordinate CA are supported.
400	PCA.00020203	Invalid CA path length. The value range is [0, 6].	Invalid CA path length. The value range is [0, 6].	Please confirm whether the length of the entered CA path is correct. The value range of the CA path is [0,6].
400	PCA.00020204	Invalid CRL configuration.	Invalid CRL configuration.	Please check whether the entered certificate revocation list configuration is correct, including the OBS bucket name, CRL file name and the value range of the update cycle [7,30].
400	PCA.00020301	Invalid certificate ID. Valid certificate IDs use a hexadecimal xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx format.	Invalid certificate ID. Valid certificate IDs use a hexadecimal xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx format.	Please enter the correct certificate ID.

Status Code	Error Codes	Error Message	Description	Solution
400	PCA.00020401	Incorrect certificate signature request.	Incorrect certificate signature request.	Please check that the certificate signing request is correct.
400	PCA.00020402	Incorrect certificate. Please contact technical support.	Incorrect certificate. Please contact technical support.	Please contact technical support.
400	PCA.00020403	Incorrect certificate chain.	Incorrect certificate chain.	<p>Please confirm that the certificate chain entered meets the requirements:</p> <ol style="list-style-type: none"> <li>1. The format should be correct. When requesting through API, you need to use " " or "\r" instead of line feed;</li> <li>2. The certificate chain should be complete. Some intermediate CA certificates cannot be missing. The order is: intermediate CA &gt;... &gt; Root ca.</li> </ol>
400	PCA.00020404	Invalid status. The status can only be Pending activation, Activated, Disabled, Pending deletion, or Expired.	Invalid status. The current support status is PENDING, ACTIVED, DISABLED, DELETED, and EXPIRED.	Please enter a valid status value. The currently supported status values are: PENDING, ACTIVED, DISABLED, DELETED, EXPIRED.

Status Code	Error Codes	Error Message	Description	Solution
401	PCA.00000101	Access Denied. No permissions granted for this OBT.	Access Denied. No permissions granted for this OBT.	Please apply for public beta permission.
401	PCA.00010001	Incorrect X-Auth-Token in the request header.	Incorrect X-Auth-Token in the request header.	<p>Please check:</p> <ol style="list-style-type: none"> <li>1. Check whether the token is obtained according to the interface provided by the Identity and Access Management(IAM);</li> <li>2. Check whether the token has expired. If the problem is not solved after checking the above conditions, please contact technical support.</li> </ol>
401	PCA.00010002	Account frozen. Please contact technical support.	Account frozen. Please contact technical support.	Please contact technical support.
401	PCA.00010003	Access denied. Real-name authentication failed or account in arrears.	Access denied. Real-name authentication failed or account in arrears.	Please confirm whether the account has been authenticated by real name and whether it is in arrears. If it is still not resolved, please contact technical support.

Status Code	Error Codes	Error Message	Description	Solution
401	PCA.00010004	Insufficient permissions. Contact administrator.	Insufficient permissions. Contact administrator.	Please contact the account administrator to confirm the account permissions. If the problem is still not resolved, please contact technical support.
403	PCA.00000006	Obtaining OBS buckets failed. Please contact technical support.	Obtaining OBS buckets failed. Please contact technical support.	Please contact technical support.
403	PCA.00030001	CA or certificate quantity exceeds quota.	CA or certificate quantity exceeds quota.	Please check whether the number of CAs that have been created or the number of certificates that have been applied for has reached the maximum value. If you need to increase the quota, please contact technical support.

Status Code	Error Codes	Error Message	Description	Solution
403	PCA.00030201	Operation not allowed in the current status.	Operation not allowed in the current status.	<p>There are restrictions on the operations that the CA or certificate is allowed to perform in different states, please check the conditions of the operations:</p> <ol style="list-style-type: none"><li>1. Disable CA: CA status must be in "ACTIVED" or "EXPIRED" status;</li><li>2. Enable CA: CA status must be in "DISABLED" status;</li><li>3. Delete CA: CA status must be in "PENDING" or "DISABLED" status;</li><li>4. Restore CA: CA status needs to be in "DELETED" status;</li><li>5. Export the CSR of the CA: the CA status needs to be in the "PENDING" state;</li><li>6. Export CA certificate: CA status needs to be in "ACTIVED" or "EXPIRED" status;</li><li>7. Activate CA: The CA status needs to be in the "PENDING" state;</li></ol>

Status Code	Error Codes	Error Message	Description	Solution
				8. Applying for a certificate: The issuing CA status needs to be in the "ACTIVED" status; 9. Export certificate: The certificate status needs to be in the "ISSUED" status. If the problem is not resolved after checking the operating conditions, please contact technical support.
403	PCA.00030202	CA or certificate frozen. Contact administrator.	CA or certificate frozen. Contact administrator.	Please contact technical support.
403	PCA.00030301	Certificate public key and private key does not match.	Certificate public key and private key does not match.	If this error message appears when importing a CA certificate, please check whether the CSR of the generated certificate is derived from the CA.
404	PCA.00030102	CA or certificate is not found.	CA or certificate is not found.	Please confirm that the CA or certificate already exists.

Status Code	Error Codes	Error Message	Description	Solution
404	PCA.00030103	Issuer CA is not found	Issuer CA is not found	Please confirm that the specified issuing CA has been created and the status is "ACTIVED".
500	PCA.00000001	Unknown error. Please contact technical support.	Unknown error. Please contact technical support.	Please contact technical support.
500	PCA.00000002	Parameter processing failed. Please contact technical support.	Parameter processing failed. Please contact technical support.	Please contact technical support.
500	PCA.00000003	Certificate processing failed. Please contact technical support.	Certificate processing failed. Please contact technical support.	Please contact technical support.
500	PCA.00000004	Key processing failed. Please contact technical support.	Key processing failed. Please contact technical support.	Please contact technical support.
500	PCA.00000005	Authentication failed. Please contact technical support.	Authentication failed. Please contact technical support.	Please contact technical support.

## A.3 Obtaining a Project ID

### Obtaining a Project ID by Calling an API

You can obtain the project ID by calling the API for [Querying Project Information Based on Specified Criteria](#).

The API used to obtain a project ID is GET <https://{{Endpoint}}/v3/projects>. **Endpoint** is the IAM endpoint and can be obtained from [Regions and Endpoints](#). For details about API authentication, see [Authentication](#).

In the following example, **id** indicates the project ID.

```
{  
  "projects": [  
    {  
      "domain_id": "65382450e8f64ac0870cd180d14e684b",  
      "is_domain": false,  
      "parent_id": "65382450e8f64ac0870cd180d14e684b",  
      "name": "xxxxxxxx",  
      "description": "",  
      "links": {  
        "next": null,  
        "previous": null,  
        "self": "https://www.example.com/v3/projects/a4a5d4098fb4474fa22cd05f897d6b99"  
      },  
      "id": "a4a5d4098fb4474fa22cd05f897d6b99",  
      "enabled": true  
    }  
  ],  
  "links": {  
    "next": null,  
    "previous": null,  
    "self": "https://www.example.com/v3/projects"  
  }  
}
```

## Obtaining a Project ID from the Console

A project ID is required for some URLs when an API is called. To obtain a project ID, perform the following operations:

1. Log in to the management console.
2. Click the username and choose **My Credentials** from the drop-down list.
3. On the page, view the project ID in the project list.

**Figure A-1** Viewing project IDs
