1 Version Lifecycles..... 1

2 Release Notes..... 10

2.1 Elasticsearch Release Notes..... 11

2.2 OpenSearch Release Notes..... 14

1Version Lifecycles

On the CSS console, a cluster version is displayed in the format of **Cluster version(Image version)**, where:

- **Cluster version** indicates the cluster's major version, for example, **7.10.2**.
- **Image version** indicates the cluster's image version in the format of **Cluster version_Requirement version_Date identifier**. For example, **7.10.2_24.3.0_0926** indicates version 24.3.0_0926 based on 7.10.2.

The lifecycle of a CSS cluster version includes the following milestones:

- End of Marketing (EOM): Four years after release, the version is no longer available for new cluster deployments.
- End of Full Support (EOFS): One year after EOM (five years after release), the version no longer receives fixes for general bugs or minor issues. Only security updates and critical bug fixes will be provided until End of Service (EOS).
- End of Service (EOS): Six months after EOFS (5.5 years after release), all support is discontinued for the version. The customer will have to upgrade to a new version.

Lifecycle of Elasticsearch Cluster Versions

[Table 1-1](#) provides the lifecycle of CSS Elasticsearch cluster versions, helping you plan your version upgrade schedule.

Table 1-1 Elasticsearch version lifecycle

Cluster Version	Image Version	Status	Released	EOM	EOFS	EOS
5.5.1	NA	EOS	2017.09.30	2021.09.30	2022.09.30	2023.03.30
6.2.3	NA	EOS	2018.06.30	2022.06.30	2023.06.30	2023.12.30
6.5.4	NA	EOS	2019.03.30	2023.03.30	2024.03.30	2024.09.30

Recommended Action Upon Version EOX

When a cluster version reaches an EOX state (EOM, EOFS, or EOS), you have the following options:

- Version upgrade: If your Elasticsearch and OpenSearch clusters can be upgraded, upgrade them. For details, see [Upgrading the Version of an Elasticsearch Cluster](#) or [Upgrading the Version of an OpenSearch Cluster](#).
- Cluster migration: If your Elasticsearch or OpenSearch clusters cannot be upgraded, migrate them to achieve cross-version upgrade. For details, see [Elasticsearch Data Migration](#). Logstash clusters cannot be upgraded. To use a new version, save the configuration file **conf** in the original cluster as a user-defined template. After creating a new cluster, select the saved **conf** template as a user-defined template of the new cluster to restore the data of the old cluster.

2 Release Notes

2.1 Elasticsearch Release Notes

Elasticsearch 7.10.2

Table 2-1 Elasticsearch 7.10.2

Image Version	Description
7.10.2_25.6.0_0814	New features and performance enhancements: • Added the elasticsearch-analysis-vietnamese plugin. • Removed sensitive information from ClusterState for Elasticsearch clusters. • Optimized the deduplication function for HPACK graph indexes. • Enhanced ISM reliability concerning the circuit breaker mechanism. • Resolved the following issue: lifecycle management tasks cannot be executed once the disk space usage exceeds 95%. • Resolved the following issue: the backup and restoration plugin occasionally fails to create a repository. • Resolved the following issue: admin permissions are lost after the built-in role mapping is modified. • Resolved the following issue: indexes that are in the index recycle bin are not automatically deleted upon expiration. • Resolved the following issue: the index monitoring plugin sometimes cannot obtain the index status. • Optimized security mode switching for existing clusters. Resolved the following issue: the security mode fails to be changed when the cluster has a large number of index shards. • Added the online web search function for the pg_search plugin, which supports OpenAI's embedding and reranking APIs. • Resolved the following issue: IP addresses that are already blacklisted can still send requests.

Image Version	Description
7.10.2_25.3.0_0507	New features and performance enhancements: • Removed some residual settings for plugins when restoring indexes. • Fixed the following issue: The SQL plugin may cause some nodes to restart. • Fixed the following issue: The breaker of a security-mode cluster is inconsistent with the Elasticsearch design. • Optimized node lockout mechanism: To prevent specific nodes from being locked due to repeated incorrect password attempts, add their IP addresses to a whitelist. • Fixed the following issue: Occasionally, the file descriptor remains allocated after a Kibana log file is deleted. • Optimized compatibility with clients of versions 7.x and 8.x. • Added support for a custom QueryPhase plugin. Vector indexes support parallel searches across segments. • Added write failure monitoring. • Fixed the following issue: The lifecycle plugin may cause upgrade failures. • Fixed the following issue: The error "topDocs already consumed" may occur when sorting is performed. • Optimized the error message displayed when decoupled storage and compute (index freezing) is used for a non-existent index. • Fixed the following issue: The IK dictionary file may not take effect on new nodes upon an upgrade or scale-out operation. • Fixed the following issue: Kibana cannot deliver password change requests due to an incorrect UI string (Chinese). • Supports a retry mechanism for OBS access by the hpack vector plugin. • Fixed the following issue: A 6.x security-mode cluster may fail to be upgraded to 7.10.2. • Fixed the following issue: Elasticsearch processes may fail to restart with the error "alias has more than one write index." • Kibana basePathAlias can contain -_.

Image Version	Description
7.10.2_25.1.0_0227	New features and performance enhancements: • Added a node alarm to indicate abnormality of the filesystem tune2fs. • Fixed the following issue: File handles may fail to be released promptly during log ingestion. • Vector search supports indexing algorithms GRAPH_SQ4 and GRAPH_SQ8. • The index lifecycle plugin supports skipping the rollover step. • Fixed the following issue for the storage-compute decoupling plugin: An incompatibility issue may occur during upgrade due to obs_index_allocator. • Fixed the following issue: Process restart may occur when a _msearch query is canceled.

Elasticsearch 7.6.2

Table 2-2 Elasticsearch 7.6.2

Image Version	Description
7.6.2_25.6.0_0814	New features and performance enhancements: • Removed sensitive information from ClusterState for Elasticsearch clusters. • Resolved the following issue: the backup and restoration plugin occasionally fails to create a repository. • Resolved the following issue: admin permissions are lost after the built-in role mapping is modified. • Resolved the following issue: IP addresses that are already blacklisted can still send requests. • Resolved the following issue: the index monitoring plugin sometimes cannot obtain the index status. • Enhanced ISM reliability concerning the circuit breaker mechanism.

Image Version	Description
7.6.2_25.3.0_0506	New features and performance enhancements: • Removed some residual settings for plugins when restoring indexes. • Fixed the following issue: The SQL plugin may cause some nodes to restart. • Fixed the following issue: The breaker of a security-mode cluster is inconsistent with the Elasticsearch design. • Added write failure monitoring. • Fixed the following issue: The IK dictionary file may not take effect on new nodes upon an upgrade or scale-out operation. • Fixed the following issue: Snapshot operations may get stuck when a circuit breaker is triggered. • Fixed the following issue: Shards may fail to be allocated when read/write splitting is enabled.
7.6.2_25.1.0_0227	New features and performance enhancements: • Added a node alarm to indicate abnormality of the filesystem tune2fs. • The index lifecycle plugin supports skipping the rollover step. Fixed the following issue: If an index name contains minutes, the rollover alias may fail to be updated. • Fixed the following issue for the storage-compute decoupling plugin: An incompatibility issue may occur during upgrade due to obs_index_allocator. • Fixed the following issue: Process restart may occur when a _msearch query is canceled.

2.2 OpenSearch Release Notes

OpenSearch 2.19.0

Table 2-3 OpenSearch 2.19.0

Image Version	Description
2.19.0_25.6.0_0814	Added the new version OpenSearch 2.19.0. This version integrates the unique enhancements of CSS into the open-source OpenSearch 2.19.0 release.

OpenSearch 2.17.1

Table 2-4 OpenSearch 2.17.1

Image Version	Description
2.17.1_25.6.0_0814	Upgraded the base image version.
2.17.1_25.3.0_0407	The same as OpenSearch 2.17.1 in the open-source community.

OpenSearch 1.3.6

Table 2-5 OpenSearch 1.3.6

Image Version	Description
1.3.6_25.6.0_0814	New features and performance enhancements: • Removed sensitive information from ClusterState for OpenSearch clusters. • Optimized permission control for the security plugin. • Enhanced ISM reliability concerning the circuit breaker mechanism. • Resolved the following issue: lifecycle management tasks cannot be executed once the disk space usage exceeds 95%. • Resolved the following issue: the backup and restoration plugin occasionally fails to create a repository. • Resolved the following issue: admin permissions are lost after the built-in role mapping is modified. • Resolved the following issue: when a process is restarted to rectify OpenSearch parameter errors, its status flag is incorrectly set to successful.

Image Version	Description
1.3.6_25.3.0_0407	New features and performance enhancements: • Removed some residual settings for plugins when restoring indexes. • Fixed the following issue: The breaker of a security-mode cluster is inconsistent with the Elasticsearch design. • Optimized node lockout mechanism: To prevent specific nodes from being locked due to repeated incorrect password attempts, add their IP addresses to a whitelist. • Added write failure monitoring. • Added the Pangu search plugin to implement semantic search. • Fixed the following issue: The IK dictionary file may not take effect on new nodes upon an upgrade or scale-out operation.
1.3.6_25.1.0_0227	New features and performance enhancements: • Added a node alarm to indicate abnormality of the filesystem tune2fs. Fixed the following issue: File handles may fail to be released promptly during log ingestion. • Fixed the following issue: Process restart may occur when a _msearch query is canceled.
